DIGITAL SOLUTIONS GUIDE

Updated Des 28th, 2023

INDEX

ABOUT CTI

PT Computrade Technology International (CTI Group) is a cloud and digital solution provider in Southeast Asia with progressive innovation.

Since 2003, with strong partnerships with more than 70 World-Leading IT Brands.

We currently oversee 12 IT companies, specializing in technologies expertise based on product and service differentiation, complete with more than 250 international certified engineers to give you the best support & experience in discovering your digital needs.

We proudly expand our territory across Southeast Asia by establishing Computrade Technology Malaysia (CTM) and Computrade Technology Philippines (CTP).

About BPT

PT. Blue Power Technology (BPT) is a leading IT infrastructure value added distributor that focus on helping customers in facing numerous technology advancements. Started as a hardware and software distributor, BPT also has enrich its portfolio with some products that follow future trends and demands. BPT also known of its outstanding reputation in its paralleled expertise and on-time product distribution & service in the IT industry. BPT will always commit to build it's competency and keep customer's trust in supporting their business.

Product Issuer : Alibaba Cloud
Issuer's Business Type : Cloud
Headquarter : China
Product Website : www.alibabacloud.com
Target Market : Cross Industry
Solutions : Cloud
Service Scale : SME, Enterprise & Multinational Company

ABOUT

Alibaba Cloud is a global cloud company headquartered in Hangzhou, China. As the cloud computing arm and business of Alibaba Group, Alibaba Cloud provides a comprehensive suites if global cloud computing services to power both our international customers' online businesses and Alibaba Group's own e-commerce ecosystem. Alibaba Cloud provides solutions that lead the market in international performance and usability, cloud security, and advanced R&D technology. For the fourth year in a row, Alibaba is ranked as the third largest Infrastructure-as-a-Service (IaaS) provider in the world and the biggest in Asia Pacific in 2021 by revenue. Alibaba Cloud is committed to help grow Indonesia's businesses and economy, thus Alibaba Cloud have 3 data center and 1 scrubbing Center in Indonesia.

PRODUCT OVERVIEW

Storage & CDN

Object Storage Service (OSS)
Alibaba Cloud Object Storage Service (OSS) is an easy-to-use service that enables you to store, backup and archive large amounts of data on the cloud. OSS acts as an encrypted central repository from where files can be securely accessed from around the globe. OSS guarantees up to 99.9% availability and is a perfect fit for global teams and international project management.

Content Delivery Network (CDN)
Deliver online content to end-users anywhere in the world on Alibaba Cloud CDN (Content Delivery Network). With 1,200+ nodes distributed across the globe, Alibaba Cloud CDN enables users to effectively reduce website response time to milliseconds, ensure smooth video streaming and handle large volumes of traffic.

Security

Anti-DDoS Pro
Alibaba Cloud Anti-DDoS Pro is a value added protection service to ensure high availability and provide complete protection to your online business from all kinds of malicious DDoS attacks. The product also ensures the elimination of single-point-of-failure from real-time DDoS attacks, HTTP flood attacks, empty connection attacks, slow connection attacks and other web application attacks.

Web Application Firewall 3.0 (latest edition)
WAF is a cloud firewall service that protects core website data and safeguards the security and availability of your site. Based on powerful Big Data cloud capabilities and underlying security, WAF provides protection against web-based attacks, including SQL injections, XSS, Malicious BOT, command execution vulnerabilities, and other common web attacks. Web Application Firewall (WAF) 3.0 supports the subscription billing method and pay-as-you-go billing method.

Big Data

E-Map Reduce
Alibaba Cloud Elastic MapReduce (E-MapReduce) is a big data processing solution to quickly process huge amounts of data. Based on open source Apache Hadoop and Apache Spark, E-MapReduce flexibly manages your big data use cases such as trend analysis, data warehousing, and analysis of continuously streaming data.
E-MapReduce simplifies big data processing, making it easy, fast, scalable and cost-effective for you to provision distributed Hadoop clusters and process your data. This helps you to streamline your business through better decisions based on massive data analysis completed in real time.

Solutions

Max Compute

MaxCompute (previously known as ODPS) is a general purpose, fully managed, multi-tenancy data processing platform for large-scale data warehousing. MaxCompute supports various data importing solutions and distributed computing models, enabling users to effectively query massive datasets, reduce production costs, and enzsure data security.

EMAS (Enterprise Mobile Application Studio) Mobile Testing

Mobile Testing is a cloud platform that provides on-device testing services for enterprises and mobile developers. Mobile Testing provides a large number of popular models and offers 24/7 services to help you discover hidden risks in apps, including but not limited to app crashes, compatibility issues, functionality issues, and performance issues. It aims to improve the quality and market competitiveness of apps and reduce user churn.

Zoloz Real ID for E-KYC

Real ID is an end-to-end solution which helps you significantly reduce turnaround time when verifying customer accounts with a world-leading, proprietary, anti-spoofing algorithm for authentication. Real ID features are security of the liveness technology, reduce identity fraud, approval alerts, multiple service access, risk control policies, and compatibility with identity verification of various documents. Alibaba Cloud provides Native APP SDK mode for you to integrate with the Real ID services.

Container as a Service for DevOps

Alibaba Cloud Container Service for Kubernetes (ACK) integrates virtualization, storage, networking, and security capabilities. ACK allows you to deploy applications in high-performance and scalable containers and provides full lifecycle management of enterprise-class containerized applications. Alibaba Cloud was one of the first vendors to pass the Kubernetes conformance certification tests globally.

Product Issuer	: CloudXtreAM
Issuer's Business Type	: Cloud
Headquarter	: Indonesia
Product Website	: https://www.bluepowertechnology.com/products-detail/Cloud-Xtream
Target Market	: Cross Industry
Solutions	: Cloud
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Cloud XtreAM is the complete cloud solution provided by Blue Power Technology using world-class cloud services provider, powered by Alibaba Cloud and IBM Cloud. Cloud-XtreAM computing is a new paradigm of solutions in Information Technology (IT) as an effect of technology has played big role in our daily basis. Cloud-XtreAM Computing involves deploying groups of remote servers and software networks.

PRODUCT OVERVIEW

Cloud XtreAM approach is a crafted combination of high tech and high touch. Cloud XtreAM collabrorate with customers by tailoring technology solutions to meet their specific technical challenges. What Cloud XtreAM and Blue Power Technology offer:

1. Security Solution
If you are moving critical applications and data to cloud, our challenges are security. We offer comprehensives data center security portfolio extends across cloud to provide unmatched protection for the for dangerous gaps that can be introduced by adoption of cloud.

2. Disaster Recovery on Cloud
Business demand 24x7 service levels for application availability. It requires the effectiveness of disaster recovery solution to support business continuity plan. BPT provide DR solutions that are suitably fast, flexible, adaptable, and automated based on cloud. Our solutions provide to meet your RTO and PRO business requirement.

3. Private Cloud
We enabling your existing IT infrastructure into a cloud-computing platform that is implemented within the corporate firewall, under the control of the IT department.

4. Infrastructure as a Services
The Cloud is not a commodity, and virtual servers are not the same wherever you go. You expect any virtual cloud server to have the speed required for deployment, flexible scalability, and pay-as-you-go billing. We deliver the solution of virtual servers exceed those expectations. Our virtual server deliver a higher degree of customization, transparency, and it also integrate seamlessly with metal bare servers.

5. Backup and Recovery
Offers private or public, cloud-based, on-site or off-site data backup services help you plan for backup, retention and retrieval, enabling security-rich around the clock access to information.

Issuer	: DigitalOcean
Issuer's Product Business Type	: Cloud
Headquarter	: USA
Product Website	: www.digitalocean.com
Target Market	: Cross
Industry Solutions	: Cloud
Service Scale	: Developers, SMB, Startups

ABOUT

DigitalOcean simplifies cloud computing so builders can spend more time creating software that changes the world. Founded in New York on 2012, DigitalOcean make decisions that eliminate complexity and obstacles to our moving fast so we can enable our customers to focus on testing their ideas, building their businesses and realizing their dreams.

DigitalOcean has 13 Data Centers in 8 countries.

PRODUCT OVERVIEW

COMPUTE

Build and release faster with scalable compute products in the cloud. Get flexible server configurations sized for any application, industry-leading price to performance, and predictable pricing that's the same across regions and usage volumes.

Droplets
Droplets are on-demand Linux virtual machines. Choose from shared CPU and dedicated CPU plans, with variable amounts of RAM and locally attached SSD storage.

Kubernetes
DigitalOcean provides an easy-to-use managed Kubernetes service, providing you uptime, scalability, and portability for your cloud native apps. DigitalOcean Kubernetes is certified by the CNCF Certified Kubernetes Conformance Program to ensure easy migration, and supports hybrid cloud scenarios while avoiding vendor lock-in.

App Platform
App Platform helps to build, deploy, and scale apps quickly using a simple, fully managed solution. DigitalOcean handle the infrastructure, app runtimes and dependencies, so you can focus on your code.

Functions
Functions is a serverless computing solution that runs on-demand, enabling you to focus on your code, scale instantly with confidence, and save costs by eliminating the need to maintain servers.

STORAGE

Store and quickly access any amount of data reliably in the cloud. DigitalOcean offers several kinds of storage depending on your unique needs.

Spaces Object Storage
Spaces is an S3-compatible object storage service that lets you store and serve large amounts of data. Each Space is a bucket for you to store and serve files. The free, built-in Spaces CDN minimizes page load times, improves performance, and reduces bandwidth and infrastructure costs. Store and scale vast amounts of data without worrying about compute server storage limits.

Volumes Block Storage
Attach secure, scalable, highly available NVMe-based Volumes Block Storage to Droplets and get the latest standard in storage technology that is faster than SSDs and traditional HDD storage.

Spaces Content Delivery Network
Quickly deliver data from Spaces with a built-in Content Delivery Network that is close to your end-users.

NETWORKING

Secure and control the traffic to your applications with your own private network, traffic filtering, and load balancing. Enjoy powerful networking solutions that enhance and secure your applications.
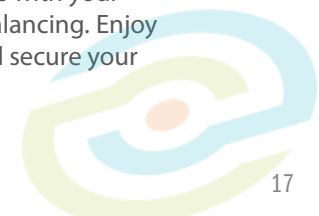

Cloud Firewalls
Protect your applications by filtering out unwanted traffic. Filtering occurs upstream and in front of your server infrastructure.

Load Balancers
Scale your applications more easily with a highly available load balancing service that directs users to available resources.

Virtual Private Cloud
Improve your application security with your own private network, which restricts traffic to resources provisioned on your same account.

Reserved IPs
Increase availability by easily switching incoming traffic across your server infrastructure.

DNS
Reliable resolutions with a scalable domain name system (DNS) service.

IPv6
Configure IPv6 addresses at any time. IPv6's massive increase in available address space makes it less vulnerable to security exploits like brute force attacks.

DATABASES

Combine the power of our core virtual machine platform with fully managed MongoDB, MySQL, PostgreSQL, and Redis databases to give your application the performance it needs— without the operational demands that come with building and

running your own database server.

Tools and Services
Manage resources programmatically and easily integrate them across your developer ecosystem.

API
Manage your DigitalOcean infrastructure with our RESTful API.

Client libraries
DigitalOcean collection of libraries lets you use our API in a variety of programming languages.

CLI
Manage your DigitalOcean infrastructure through your terminal with our open-source Command Line Interface (CLI).

Terraform provider
Treat your DigitalOcean infrastructure as code.

Github Actions
Automate DigitalOcean infrastructure in response to activity on Github.

Custom images
Provision servers with your own custom image, or choose from various Linux distributions.

Container Registry
Easily store, manage and protect private container images. One

free repo with 500 MBs.

Support Plan
Get rid of roadblocks on your cloud journey, choose from 3 levels of support.

MANAGEMENT TOOLS

Take complete control of your projects with powerful, intuitive management tools that give you and your teams the means to efficiently and effectively realize your goals.

Monitoring
Monitor application and infrastructure resource usage with built-in monitoring and alerting.

Projects
Organize your resources into groups that fit the way you work.

Teams
Collaborate with others to manage and scale infrastructure without sharing credentials or billing.

Uptime
Get the endpoint status info you need to stay on top of slowdowns and other issues automatically via Slack or email. Gather data that will help you save resources and react faster to problems.

Product Issuer	: ESRI
Issuer's Business Type	: Maps and Geographic
Headquarter	: Redland, California, USA
Product Website	: www.esri.com
Target Market	: Cross Industry
Solutions	: GIS Solution
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

ESRI is an international supplier of geographic information system (GIS) software, web GIS and geodatabase management applications. The company is headquartered in Redlands, California. Esri uses the name ArcGIS to refer to its suite of GIS software products, which operate on desktop, server, and mobile platforms. ArcGIS also includes developer products and web services.

PRODUCT OVERVIEW

ArcGIS

ArcGIS is a geographic information system (GIS) for working with maps and geographic information. It is used for creating and using maps, compiling geographic data, analyzing mapped information, sharing and discovering geographic information, using maps and geographic information in a range of applications, and managing geographic information in a database.

ArcGIS offers a unique set of capabilities including;

1. Spatial Analytics

Spatial analytics is the heart and soul of ArcGIS. You use it to find the best location for your business, plan for smarter communities, and prepare and respond faster in crucial situations.

2. Imagery & Remote Sensing

ArcGIS gives you everything you need to manage and extract answers from imagery and remotely sensed data. It includes imagery tools and workflows for visualization and analysis, and access to the world's largest imagery collection.
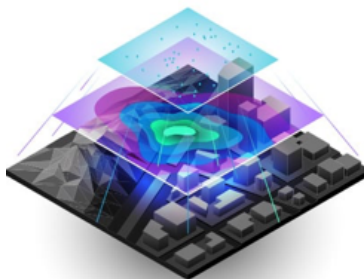

3. Mapping & Visualization

Maps help you spot spatial patterns in your data so you can make better decisions and act. Maps also break down barriers and facilitate collaboration. ArcGIS gives you the ability to create, use, and share maps on any device.
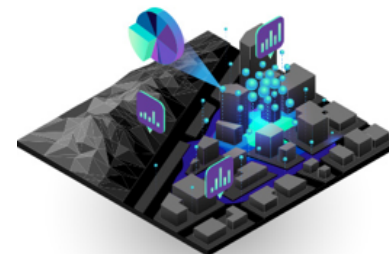

4. Real-Time GIS

Real-time GIS empowers you with location monitoring of any type of sensor or device — accelerating response times, optimizing safety, and improving operational awareness across all assets and activities, whether in motion or at rest.
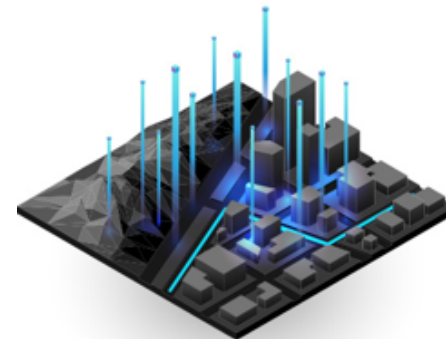

5. 3D GIS

3D GIS brings real-world context to your maps and data. Instantly transform your data into smart 3D models and visualizations that help you analyze and solve problems and share ideas and concepts with your team and customer
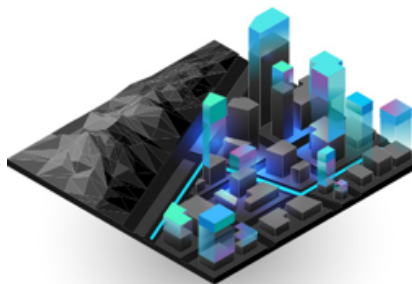

6. Data Collection & Management

With ArcGIS, you can easily collect, crowdsource, store, access, and share your data efficiently and securely. You can integrate data stored in your business systems and geo-enable any data from any source.

Product Issuer	: EXTREME NETWORKS
Issuer's Business Type	: Computer Networking
Headquarter	: USA
Product Website	: www.extremenetworks.com
Target Market	: Cross Industry
Solutions	: Software
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Extreme Networks is one of the world's largest leading providers of high-performance networking solutions. Extreme Networks always offer their customer the highest quality products, best customer care, and an ease process that helps businesses thrive. Located in Silicon Valley as a center collaborate with another office in North America, South America, Asia Pacific, Europe and the Middle East. Ethernet computer network products for enterprise and carrier grade (metro) networks using the speed and scale of 10 Gigabit Ethernet, 40 Gigabit Ethernet and 100 Gigabit Ethernet.
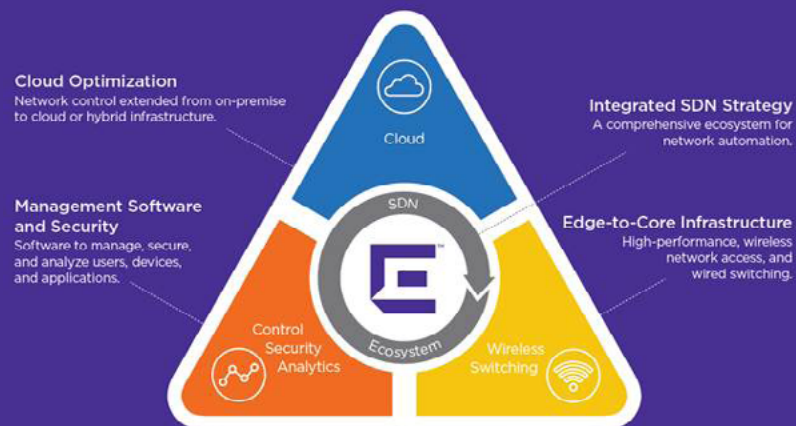

PRODUCT OVERVIEW

Extreme Networks offers comprehensive suite of software tools in a single pane-of-glass to support effortless management, and to secure and analyze every user, device and application on the network, with unique capabilities like;

• Integrated SDN Strategy
Extreme defines 'SDN' as 'Software-Driven Networking'. Unlike other vendors who are chasing the SDN (Software Defined Networking) label by rolling out a point product here or southbound protocol there, Extreme provides a comprehensive platform that includes software and hardware components which, along with technology partners, form an ecosystem that is capable of adapting the network in real-time to meet the needs of users and applications no matter where they are.

And this evolution hasn't been haphazard or by chance. It's been driven by our vision of the network as a force for building stronger connections that deliver more meaningful business outcomes. And so every step in the journey has been a logical one aimed at making your network a more powerful connector of people.

Cloud Optimization
Network control extended from on-premise to cloud or hybrid infrastructure.

Integrated SDN Strategy
A comprehensive ecosystem for network automation.

Management Software and Security
Software to manage, secure, and analyze users, devices, and applications.

Edge-to-Core Infrastructure
High-performance, wireless network access, and wired switching.

FINISAR

Product Issuer	: Finisar Corporation
Issuer's Business Type	: Networking
Headquarter	: USA
Product Website	: www.finisar.com
Target Market	: All Industries
Solutions	: Optical Transceivers
Service Scale	: SMB, Enterprise

ABOUT

Finisar is a global technology leader in optical communications, providing components and sub systems to networking equipment manufacturers, data center operators, telecom service providers, consumer electronics and automotive companies. Founded in 1988, Finisar designs products that meet the increasing demands for network bandwidth, data storage and 3D sensing subsystems. Finisar's industry-leading products include optical transceivers, active optical cables, optical engines, communication and sensing components, wavelength management devices, and optical instrumentation.

PRODUCT OVERVIEW

OPTICAL TRANSCEIVERS (INCLUDING QSFP+, CFP, SFP+, SFP28)

Transceivers and Transponders for Datacom and Telecom Applications Finisar's broad product selection and innovative technology have made us the optical module manufacturer of choice for all major networking equipment vendors worldwide. We have taken a leading role in transforming the data communications and telecommunications equipment market from utilizing discrete optical components to leveraging the design and pay-as-you-grow flexibility offered by pluggable modules. Our products are fully compliant with Ethernet, Fibre Channel, Infiniband, SONET/SDH/OTN, CPRI and PON standards and operate at data rates in excess of 100 Gb/s.

Some of our product:

| 4G Fibre Channel SFP Transceiver | 10G CPRI Wireless SFP+ Transceiver | 40G QSFP+ Transceiver | 100G 10km QSFP28 Optical Transceiver |

Product Issuer	: G1ant
Issuer's Business Type	: Software
Headquarter	: London, England
Product Website	: https://g1ant.com/
Target Market	: Cross Industry
Solutions	: Robotic Process Automation
Service Scale	: SME, Commercial, Enterprise

ABOUT

G1ANT is the fastest-growing RPA software platform on the market. G1ANT was placed in TOP 4 RPA Companies by Software Reviews and was named one of the RPA Champions of Emotional Footprint Awards 2021. We know how to make your business work faster and more effective with robots made on G1ANT software.

PRODUCT OVERVIEW

G1ANT.STUDIO

Our platform is open, transparent, secure, and easy to deploy. G1ANT provides clear insights into automation processes, highlighting errors and offering improvement suggestions. It supports popular programming languages like Java, Python, and C#, making it accessible to any IT staff without specialized training.

Our object-oriented code ensures modular build, stability, and high performance. G1ANT is partly open-source, with audited code suitable for sensitive data. It offers an innovative automation language, comprehensive documentation, and support for all desktop and web applications.

G1ANT.ORCHESTRATOR

For large-scale applications and deployments, we offer an Enterprise version of our software. It includes built-in integrations for Google Docs, Internet Explorer, MS Office, Google OCR, Selenium, IBM Watson, and Java. These integrations are pre-configured and fully supported, eliminating the need for manual addon installation.

G1ANT Enterprise also includes an Orchestrator module, which provides a unique admin dashboard for managing and deploying multiple automations simultaneously. This feature is especially valuable for system administrators and DevOps engineers managing numerous servers and users. With the Orchestrator module, they can efficiently handle hundreds of servers and thousands of users from a single remote screen, eliminating the need for separate server connections.

G1ANT.Studio features

✔ Agile Methodology Instant Installation

✔ Partial Automation (attended)

✔ 100% Automation (unattended)

✔ Ability to run on Physical and/or Virtual Machines

✔ API Integration

✔ Integration with External Tools

✔ Microsoft Excel/Outlook/Word

✔ Compatibility

✔ OCR/Image Recognition Functionality

✔ Artificial Intelligence Integrated

✔ Rules Based Process Flows

✔ Thin Client Interaction

✔ Reusability of Tasks/Processes

✔ Scalability

✔ Flexible Platform/Language to Extend with new Commands and Triggers

✔ Flexible Platform/Language to Extend with new Commands and Triggers

✔ Logical Calculation Functionality

✔ Handling of Non-Binary Rules

✔ Use of Variables

✔ Scripts and Usage

✔ Works on User's Privileges

✔ No Additional Privileges Required

✔ Infrastructure and Failover Support

✔ Developer Help

✔ Ease of Collaboration between Developers

✔ Trial Version and User Manual Available

G1ANT excellence

G1ANT doesn't disrupt your workflows, integrates with all existing tools, and doesn't require any consultancy or custom training!

Fire-and-forget

G1ANT can be set up once and work almost indefinitely with minimal upkeep. Any problems you will be automatically notified about, so relax and enjoy the time G1ANT works for you.

Human-friendly

G1ANT's automation is effortless to grasp and mimic human operations – only faster and more precisely. Your existing business processes can be mapped right away, with no adjustments needed.

Security

G1ANT is the most secure and auditable RPA tool on the market – open-source code and automation, no telemetry, run entirely offline on-premise. Even the most sensitive data is handled without risk, hence why many banks and insurance companies trust G1ANT.

$$$

G1ANT is one of the cheapest RPA tools on the market, AND it does not require consultancy, custom development, or training. Your existing IT staff can work with it right away in programming languages they are familiar with, making the implementation smooth and cost-effective.

Loved by IT

G1ANT is the tool preferred by IT teams and CTOs. Full security, open-source code, support for a plethora of programming languages (including Java, Python, C#), easy API integrations, OCR, and AI tip the scales in our favor.

World-class support

We offer extensive and up-to-date documentation, as well as 12-hour support in both EU and US time zones. Our RPA developers are happy to help you set up the automation, and with complex integrations, we offer a selection of certified partners in over 50 countries and 800 cities!

PRODUCT OVERVIEW

1. CLOUD NATIVE

a. SoFy

Cloud native solution factory for HCL Software

b. Now

Easily migrate your HCL Software products to the cloud platform of your preference

2. CUSTOMER EXPERIENCE

a. Commerce

The transaction platform that helps you sell more

b. Digital Experience

Integrate data, content and apps into powerful digital experiences

c. Unica

Omnichannel decision engine for enterprise marketers

3. DIGITAL SOLUTIONS

a. Domino

A secure, enterprise-grade, application development platform

b. Domino Volt

Domino's low-code capability to develop enterprise-grade apps fast

c. Domino Leap

Build enterprise apps lightning fast

d. Volt MX

A low-code app-dev platform for delivering consumer-grade apps fast

e. Digital Experience

Integrate data, content and apps into powerful digital experiences

f. Connections

Workstream collaboration for meetings, messaging, files, and more

g. Sametime

Highly secure chat and video meetings that persistent beyond the meeting

h. Notes

Email client that integrates all your important information into a single workspace

i. Verse

Business email that understands the way you work

J. Leap

Lightweight enterprise applications that transform business processes

4. SECURE DEVOPS

a. Accelerate
Make work visible with value stream management

b. Launch
Continuous delivery for the enterprise

c. Version Vault
A secure solution for version control and configuration management

d. Compass
Low-Code/No-Code change management to accelerate project

e. OneTest
Software testing tools to support a DevOps approach

f. RTist
Tooling to develop stateful, event-driven, real-time applications

BDS and i-Source

Intelligent Breach Prevention is a necessity in today's cybersecurity landscape. Hillstone BDS, our AI-powered NDR solution, and iSource, our AI-powered XDR platform, work seamlessly to protect enterprises from advanced threats.
- Highly Integrated Solution with Better TCO
- Detection, Visibility, and Insight into the Threat Kill Chain
- Easy Deployment with Minimum Configuration Effort
- i-Source is an AI-driven security analytics to identify advanced threats & abnormal behavior and able to do risk prediction and incident response
- i-Source comprehensive security posture monitoring for the entire network and able to threat tracing and forensics.

ABOUT

IgniteNet is taking a fresh approach to wireless and wired networks with a focus on simplicity, ease of use and performance, provide the easiest and lowest cost way for you to grow your network. Whether you are setting up an enterprise network in a corporate setting or installing an outdoor wireless broadband network. Behind all of the equipment is the IgniteNet Cloud, bring the easy, powerful and affordable cloud-managed WiFi.

Product Issuer	: Imperva
Issuer's Business Type	: IT Security
Headquarter	: USA
Product Website	: www.imperva.com
Target Market	: Cross Industry
Solutions	: Software & IS Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Imperva recognized as a 7-time leader in the Gartner Magic Quadrant for WAF and know as the cybersecurity leader whose mission is to protect data & all paths to it. Imperva protects the data of over 6,200 customers from cyber attacks through all stages of their digital transformation.

PRODUCT OVERVIEW

1. Application Security

Application, APIs and miroservices are deployed faster than security teams can secure them. Imperva protects customer's critical workloads with the industry's only defense-in-depth approach.

Web Application Firewall (WAF)
Analyze traffic to your applications to stop cyber attacks and ensure uninterrupted business operations.

RASP (Runtime Application Self Protection)
Protection against zero-day attacks, cloud Native application protection and sees traffic within application even from malicious insiders.

Attack Analytics
Detecting applications attacks by applying machine learning and domain expertise across the application security stack to reveal patterns in the noise.

DDos Protection
Secure all your assets at the edge of uninterrupted business process with guaranteed uptime.

Cloud Security
Imperva secures your cloud environment with a complete solution stack that protects your applications, APIs.

2. Database Security
Keep your customers' trust, and safeguard your company's reputation with Imperva Data Security. We protect data wherever it lives, on-premises or in the cloud, and give you actionable insights into dangerous user activity that puts your data at risk

Database Activity Monitoring & Database Firewall
Imperva Database Activity Monitoring and Database Firewall are Imperva solutions that work together to automate enterprise-wide compliance and ensure database security by providing full visibility into database user access, discovering potential vulnerabilities and providing real-time security capabilities to alert of or even block risky behavior and dangerous policy violations.

Cloud Data Security
Cloud Data Security empowers security teams with fast setup, cloud-native, visibility tooling tailored to protect data living in DBaaS. Our complete SaaS solution allows you to onboard in minutes and obtain real-time visibility of your cloud data.

Issuer's Business Type : IT Application/Network/Infrastructure/Security
Headquarter : USA
Product Website : www.kemptechnologies.com
Target Market : Cross Industry
Solutions : Load Balancer, Network Detection and Response (NDR), Network Performance Monitoring and Diagnostic (NPMD)
Service Scale : Start-Up, Multinational Company, Education, Government, Enterprise, SME

ABOUT PROGRESS KEMP

Progress Kemp delivers the secure, always-on application experience (AX) that enterprises and service providers require. ProgressKemp's load balancing, network performance monitoring, and network detection/response solutions maximize value through simplified deployment, flexible licensing, and world-class technical support. With over 100,000 deployments in 138 countries, ProgressKemp is the world's most popular application experience solution. Take control of your AX.

Dual, Redundant Power Supplies

1U, Compact Chassis
Active/Hot-Standby
Active, Multi-Node (N+M) Clustering

Hyper-performance L7 Processing
15 Gbps App Throughput
12,000 SSL TPS (2K Keys)
35 Million Concurrent Connections

Dual, Redundant HDD

16x 1Gb Ports, Network Segment
Isolation & NIC Teaming Capable

4x 10Gb SFP+ Ports, Network Segment
Isolation & NIC Teaming Capable

LoadMaster X15

PRODUCT OVERVIEW

Product Uniqueness
- Simple, easy to use products
- Most flexible licensing options
- Unmatched value and cost savings
- World Class technical support
- Award-winning L4-7 virtual ADC
- Global DNS and Traffic Management services
- Fully featured Web Application Firewall
- SSO and Secure Application Access

Loadmaster
Application Delivery and Load Balancing
- Application Availability
- Object storage optimization
- Web Application Firewall (WAF)
- Public Cloud Application

Flowmon
Network Performance Monitoring (NPMD)
- End-User Experience monitoring
- Cloud Application performance
- NetFlow/IPFIX Monitoring
- SaaS Performance Monitoring

Network Detection and Response (NDR)
- Network Behaviour Analysis
- Unknown Threat Detection
- Encrypted Traffic Analysis
- Insider Threat Detection

Product Issuer	: Lenovo
Issuer's Business Type	: Desktop, Server, Smartphone
Headquarter	: China
Product Website	: www.lenovo.com
Target Market	: Cross Industry
Solutions	: Hardware
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Lenovo delivers a complete portfolio of PCs and tablets, monitors, accessories, smartphones, smart home and collaboration solutions, augmented and virtual reality (AR/VR), commercial Internet of Things (IoT), software, services and smart infrastructure datacenter solutions worldwide. We manufacture three PCs every second and have shipped more than half a billion PCs since 1995. Our Lenovo Neptune™ water-cooling technology for high performance computing (HPC) environments has made us the No. 1 supplier of systems on the TOP500 list of the world's supercomputers. Lenovo is among the 30 largest qualifying technology companies currently listed on the Hong Kong Stock Exchange and was included as an inaugural member of the new Hang Seng TECH Index.

PRODUCT OVERVIEW

SERVER

RACKS

1. System X Rack Servers
Great for small to mid range business, segmented workload, and fit-for-purpose applications.
List of Products:
• System x3530 M4
• System x3250 M5
• System X3550 M5
• And many more

2. Think Server Rack Servers
Reliable and Available for Business-Critical Applications. World-class performance, power-efficient designs, & extensive standard features.

TOWER

1. System x Tower Servers
Ideal for smaller remote environments and standalone requirements
List of Products:
• System x3100 M5
• System x3500 M5
• And many more

2. Think Server Tower Servers
Perfect for small databases, basic virtualization, & office applications.

BLADES

1. Flex System
High performance design for maximum virtualization, flexible configuration capability, & integrated systems management.
List of Products:
Compute Nodes
• X 220
• X 240
• Many more

Expansion Nodes
• Flex System PCIe Expansion Node
• Flex System Storage Expansion Node

Chassis
• Flex System Enterprise Chassis

Storage
• Storwize V7000
• Flex System Storage Expansion Node

Networking
• Ethernet & Converged
• Fibre Channel
• Infiniband

2. Blade Center

A comprehensive portfolio of chassis, blade servers, storage, & networking options—all managed from a common infrastructure.

List of Products:
Servers
• Blade Center HS 23
• Blade Center HS 23 E

Chassis
• Blade Center S
• Blade Center H
• Blade Center HT

STORAGE

Storage-Area Network

1. IBM Storwize
IBM Storwize storage solutions increase the data storage landscape for organizations of all sizes to boost system performance and lower IT costs.
List of Products:
• IBM Storwize V 3700
• IBM Storwize V 5000
• IBM Storwize V 7000

2. Fibre Channel Switches
Industry-leading Brocade switches are the foundation for high-performance fibre channel connectivity in a wide range of storage network environments.
List of Products:
• Brocade 300 Switch
• Brocade 6505 Switch
• Brocade 6510 Switch

3. Lenovo Storage
Designed to control data-growth, Lenovo Storage solutions work seamlessly with your current infrastructure to improve performance, scalability, & availability. Plus, they're simple to operate
List of Products:
• Lenovo Storage S2200
• Lenovo Storage S3200

Tape

Tape technology is one of the most energy-efficient, portable, and secure long-term data storage solutions available. Lenovo offers a wide selection of tape storage products to meet your needs.

List of Products:
1. TS2240 Tape Drive
2. TS2250 Tape Drive Express
3. TS2260 Tape Drive Express

LIST OF PRODUCT

1. ThinkSystem Server

a. Tower Server
From small businesses to large institutions, Lenovo tower servers offer powerful performance and versatile storage configurations in a small footprint. Get the reliability you expect from the data center in an office optimized package.

b. Racks Server
From the growing small business to the enterprise workload, Lenovo rack servers deliver the unmatched value, flexibility and industry-leading efficiency to meet your mission-critical needs with legendary quality and reliability.

2. Processor

High-Density Server/ Dense Server
Lenovo dense systems deliver massive computing power in the smallest footprint for High Performance Computing (HPC), AI, cloud, grid and analytics workloads.

3. ThinkAgile
Lenovo's ThinkAgile appliances and certified nodes are designed to make life easier for you. With ThinkAgile solutions, you can simplify your IT infrastructure and accelerate time to value so you can focus on your core business.

a. ThinkAgile HX Series
Designed for ease of deployment and manageability, Lenovo ThinkAgile HX combines Nutanix software with Lenovo's No. 1 reliability and high-performance platforms.

b. ThinkAgile VX Series
ThinkAgile VX is a hyper-converged solution based on VMware vSAN that allows you to focus on your business, not on your IT infrastructure.

c. ThinkAgile MX & SXM Series
Deliver a consistent hybrid cloud experience for diverse workloads on modern, validated infrastructure while optimizing efficiency and performance with the ThinkAgile MX and SXM series.

4. ThinkEdge
Designed and built with the edge portfolio's unique requirements in mind, it is versatile enough to push server location limits, offers multiple connectivity and security options, and is easily managed with Lenovo XClarity Controller.

5. ThinkStorage

a. ThinkSystem DM Series
Redefine performance, flexibility, reliability, and security with next-generation flash and hybrid flash storage.

b. ThinkSystem DE Series
Deliver the perfect combination of performance and economy for your most important data with all-flash and hybrid-flash arrays.

Product specialty & uniqueness
1. #1 on Top500 Supercomputer List. Lenovo reaches TOP 500 in 17 markets
2. #1 in reliability for Lenovo ThinkSystem servers for 7 years in a row
3. Product shipments to 6 of the world's top 10 HyperScalers
4. Shipped over 12,000 SAP HANA systems worldwide
5. First to market with 2nd Gen Intel® Xeon® Scalable processors ("Cascade Lake") on ThinkAgile HX portfolio 17 of the top 25 research universities in the world use Lenovo
6. 1 in 3 supercomputers is powered by Lenovo. Lenovo is a leader in the liquid cooling market for these servers.
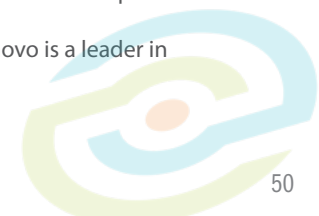

Product Issuer : OFIS
Issuer's Business Type : IoT Solutions
Headquarter : Jakarta, Indonesia
Product Website : ofis.bluepowertechnology.com
Target Market : Cross Industry
Solutions : Smart Office
Service Scale : Start-Up, International Company, Education, Government, Enterprise, SME

ABOUT

Smart Office solutions aim for smart workspaces that enable collaboration between workers and the environment to increase productivity. Smart Office also create impression of smart, modern, digital and comfortable in an office system and the people. Besides that, it can improve the company's branding with implementation of advance technology.
With OFIS, an advanced and end-to-end smart technology solution provided by Blue Power Technology (BPT), create an interconnected workplace for smart workforce become easily possible.

PRODUCT OVERVIEW

Being able to reduce business costs and maximize resources is a goal of every business. Through the use of OFIS, this can be achieved with ease.

Here's what our packages offers;

Safety and Security

With OFIS' comprehensive and integrated IoT-based security solution enables organization to automate warning alarm and get real-time monitoring security system for their office and building. Ensuring organization to increase safety and security for their occupants in the easier way.
The modules: Surveillance and Tracking System, Attendance System, and Access Control System

Features

- Using Video Analytic System integrated with surveillance system to detect anomaly in real time
- Utilize the active/passive RFID system integrated with face recognition system and access control system to track employees and visitors
- Enhanced asset tracking system to prevent it from lost
- Can be used to accommodate health protocol during covid-19 pandemic to support health and masker detection, social distancing and case tracing
- Support integrated with Alert System and Incident SOP
- Support various method of local attendance system e.g., smart card, biometric or face recognition
- Support WFH and mobile office online attendance system using GPS and maps integration
- Can be integrated with back-end ERP System
- Secure office area from unauthorized access
- Support various access method e.g., smart card, biometric or face recognition
- Integration with front desk, smart meeting room and any other OFIS packages
- Can be integrated with Building Automation System, Fire System and PAVA System in building

Front Desk

OFIS solution enables greater productivity and efficiency for all level of employees, including the front desk officer. It helps front desk officer to verify attendee invitation, set and send automate notification to attendee, show vacant and occupied rooms, and show meeting and information schedule.
The modules: Visitor Management System and Self-registration Kiosk

Features

- Features
- System that register, give access and track all visitor from arrival until exiting office
- Can use card or face recognition system for temporary access
- Automatic notification for employee when visitor arrived
- Integration with Smart Meeting Room to accommodate meeting attendance and information
- Integration with digitalization for way finding system
- Visitor tracking dashboard that show traffic every day in real time
- Support visitor self registration and data acquisition using e-KTP and invitation QR
- Can be custom designed
- Can give temporary access to visitor either using card or face recognition

Smart Meeting Room

OFIS facilitates the meeting rooms' system with the latest technology Internet of Things (IoT) to create an easier and smoother activities regarding the room's functions such as booking schedule, presentation, lights control, screens, and thermostats, all can be done by an intuitive easy-to-use touch panel.

The modules: Booking System and Room and Facility Automation

Features

- Support QR Code based Meeting Room Booking System.
- Cancelling and extending meeting using approval
- Integration with pantry and cleaning services, front desk and security system and way finding system for visitor
- Integration with google and outlook calendar system
- Utilize digital signage as information and access device
- Support Automation for Air Conditioning, Lamp and door lock security system
- Can control teleconference system, interactive display, projector, smart glass and any electronic devices in meeting room
- Control can be performed using application, tablet at meeting room, voice command or augmented reality
- Can be integrated with teleconference system, room audio and visual devices

Efficiency

Utilizing connected devices provided by OFIS solutions streamlines or even completely automates a number of routine tasks and manage various operations in several working conditions, allowing employees to focus on the more important ones and become more productive at work.

The modules: Smart HVAC and Lighting System, Efficiency Energy System, and Building Automation System

Features

- Automate HVAC and Lighting based on office operation and schedule
- Can adjust HVAC and Lighting operation based on environment condition
- Single dashboard to monitor energy consumption
- User can override operation using application, switches or voice commands
- Electricity usage report
- Can be integrated with existing Building Automation System
- Energy usage analytics
- Detect anomaly on energy usage
- Single dashboard with automation and alert system
- Connect to HVAC, lighting, security and protection of a building
- Single dashboard to monitor and control all building electronics
- Open for integration with another system

Digitalization

Besides providing various advance technologies such as videotron, smart conference, seamless display, and smart glass, that gives business perspective benefits, OFIS solution also helps organization build a futuristic workplace atmosphere that suites to the era of digitalization.

The modules: Interactive Panel, Information Display, and Content Management System

Features

- Display in meeting room to make meeting more interactive
- Can be used as interactive presentation display, collaboration media and recording facility
- Integrated with OFIS room automation
- Is a Digital Signage, Smart TV, Video Wall or Flexi Screen
- Can be used as promotion and information display that management want to share with employees and visitors
- Can be integrated with Visitor Management System
- Visitor greeting and way finding
- Customized software to manage content of all information display in the office

Seat Management System

Assist the office in managing the desk, in terms of booking and all desk support facilities, as well as automating the office system regarding correspondence, official notes, leave requests, facilities requests, etc.
The modules: Desk Booking System, Desk Facility Automation System, and Office Automation Application

Features
- Accommodate mobile office system where employee don't have a dedicated seat at the office
- Support seat booking system
- Any office facility including seat, phone and all other facility will be attached to him/her when he/she arrived at the office
- Support health protocol during covid-19 pandemic to support occupancy limitation and case tracing
- Support Automation electricity at desk
- Control can be performed using application, or display
- Support QR Reader or QR Code to activate facility at desk
- Can be integrated with pantry, cleaning service and front desk,
- Applications to make day to day processes in office easier
- Can be used to automate leave request, 'nota dinas' and office facility request

Service and Facility

With a number of integrated technologies, OFIS solution aims to remove unnecessary obstacles by simplifying menial tasks including managing the services and facilities inside the office such as parking management, payment management, cleaning service, and more.
The modules: Parking System, Ticketing System, Cleaning Services and Pantry

Features
- Manage parking spaces with occupancy sensor
- Support membership ans can use card membership or License Plate Recognition
- Mobile application to detect available spaces
- Integration with payment system
- System managed Locker system for employee
- Can use card, face recognition or application to open locker
- Integrated with all OFIS System, including access and attendance
- Support job order for cleaning services
- Can provide meal for meeting or employee
- Order directly sent to PIC as notification and can be tracked
- Report and dashboard

MEETING ROOM

OFIS Platform

OFIS Platform is a software platform that connects all the components in the Smart Office system. Whether it's sensors via controllers, application software, tablets and digitization devices and other systems

Features

- As an asset management and data collection system for sensors in the office, which is the ability to manage all devices (devices / sensors) connected to the platform and collect data from these devices.
- Ability to display dashboard status and data from each connected device
- Ability to create processes in platforms and widgets that can be displayed on the dashboard
- Supported communication protocols: MQTT, HTTP, CoAP, OPC-UA transport
- Ability to schedule processes to be carried out by the system / platform
- Ability to display reports that can be customized
- Ability to export data to CVS / XML format

OFIS ADVANTAGES

The advantages of using OFIS as a Smart Office system are as follows:
- Employee productivity will increase along with ease of activities.
- Efficient expenditure in energy use will be maintained because everything will be monitored and eliminates unnecessary expenses due to sensor use.
- Make employees and assets in the office safer from unwanted things.
- Supports Health protocol with a touchless concept and a modern office.

OFIS BENEFITS

- The benefits of OFIS are:
- Complete Automation Package
- Features and Processes that can be tailored to your needs
- Consists of several integrated components
- Can be connected with other systems

Product Issuer	: Varonis
Issuer's Business Type	: Data Analysis Software
Headquarter	: USA
Product Website	: www.varonis.com
Target Market	: Cross Industry
Solutions	: Software
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Varonis provides an innovative software platform that allows enterprises to map, analyze, manage and migrate their unstructured, human-generated data. This type of unstructured data includes an enterprise's spreadsheets, word processing documents, presentations, audio files, video files, emails, text messages and any other data created by employees.

PRODUCT OVERVIEW

A. PROTECTION PACKAGES

Varonis offers protection packages for Microsoft 365 & Entra ID, SaaS & Iaas, and Windows & NAS. These packages are designed to help organizations protect their data across multiple data repositories, on-premises and in the cloud.

B. PRODUCTS

Varonis offers protection packages for Microsoft 365 & Entra ID, SaaS & Iaas, and Windows & NAS. These packages are designed to help organizations protect their data across multiple data repositories, on-premises and in the cloud.

• DatAdvantage:
Provides in-depth permissions mapping, risk remediation, activity auditing, and compliance reporting.

• Automation Engine:
Automates data protection tasks, such as data classification and remediation, to reduce the risk of human error.

• Data Classification Engine:
Classifies data by content and context to identify sensitive information and apply security measures.

• Data Classification Labels:
Provides persistent sensitivity labels to encrypt, obfuscate, or lock down important files.

• Policy Pack:
Offers a library of classification policies to find and protect government documents.

• Dat Answers:
Provides a search engine for data stores that helps users find the data they need while ensuring data security.

• DatAlert:
Detects insider threats and cyberattacks by analysing data, account activity, and user behaviour.

• Edge:
Reduces the attack surface by safely and consistently revoking open access to sensitive data without human interaction.

• Data Transport Engine:
Provides secure and efficient data transfer between data repositories.

• DataPrivilege:
Empowers business users to autonomously monitor and regulate access controls without requiring IT support.

• DatAdvantage Cloud:
Accurately identifies sensitive data in the cloud and assigns the appropriate security protocols

• Data Classification Cloud:
Deploys an ever-expanding library of accurate and comprehensive rules to find and protect GDPR and CCPA data.

Product Issuer	: Zuler Technology PTE. LTD.
Issuer's Business Type	: B2B & B2C
Headquarter	: #03-23 Teletech Park, 20 Science Park Road, Singapore Science Park II, Singapore 117674
Product Website	: deskin.io
Target Market	:
Solutions	: Remote Control Enterprise Solution
Service Scale	: 24 x 7 Tech Support (Local & International), Technical Training, Access to R&D experts' discovery

ABOUT

DeskIn established in July 2021, known as leading network technology into systems centered on remote desktop, virtual desktops (VDI/VMI), and cloud desktops to help users improve their work efficiency and data security. DeskIn have more than 170 people professional and experienced in Internet R&D and operation with operational existed in Singapore, Australia, New Zealand, China, and Hungary.
DeskIn guarantee for high quality remote desktop connection on secure basis. With 20 years of network experience optimization, DeskIn become the first OTT SD-WAN (Software-Defined Wide Area Network) network for remote desktop with a multi-dimensional security design.

PRODUCT OVERVIEW

A. SERVICE SCALE
- 24 x 7 Tech Support (Local & International)
- Technical Training
- Access to R&D experts' discovery

B. REMOTE CONTROL ENTERPRISE SOLUTION
- Business Scenario
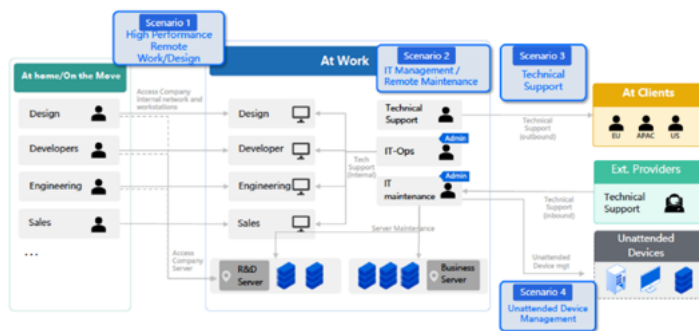

• Scenario 1: High Performance Remote Work/Design
For Graphic Design/Gaming/Video
* Real time communication with 4K/HD frame rate
* High speed connections
* Low latency & lagging rate
* Multi USB redirection (to support digital drawing tablet, printer, gaming console, camera, microphone redirection)

• Scenario 2: IT Management/Remote Maintenance
**For Large Enterprises device monitoring**
* High speed connections

* Low latency & lagging rate
* Multiple connection from multiple nodes which is enhanced with DeskIn SD-WAN backbone

For Manufacturing/Logistics Industries
* Available for all platforms (iOS & Android)
* High speed connections
* Low latency & lagging rate
* Precise loggings
* Role based management
* 3rd party management (temporarily can authorized 3rd party to connect with a limited time logs and screen recording)

• Scenario 3: Technical Support to external
For Government/Financial/Healthcare Industries
* Security focused on
   - Loggings
   - Screen recording
   - Role based management
   - 2 Factor Authentication
* High speed connections
* Low lagging rate
* Air gapped for local server deployment
* Private data management on local server

• Scenario 4: Unattended Device Management
For SMB device monitoring (Videotron, IoT)
* High speed connections
* Low latency & lagging rate
* Multiple connection from multiple nodes which is enhanced with DeskIn SD-WAN backbone

Product Specialty & Uniqueness: Remote Access Differentiations

* Global Nodes coverage - Multiple connection from multiple nodes enhanced by DeskIn SD-WAN backbone
* Core Security Functions & Data in Control à admin account can limit its user activities
* High Performance & ultra-low latency even in weak network bandwidth and condition such as IoT
* USB Redirection - the remote device can also read the users' device USB connection
* DeskIn Real Time Communication
* Efficient Video Codec - high performance video, 99% no delay
* DeskIn SD-WAN
* Flexible and high ROI

.
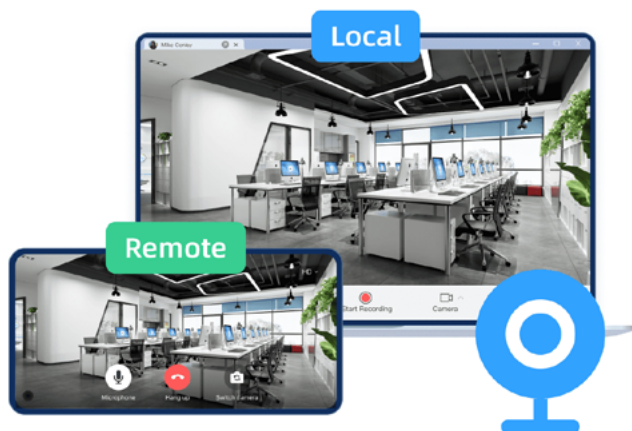

Product Issuer : Couchbase Capella™

Issuer's Business Type : All kinds of industries, mostly Digital, DevOps, start-up business that use open source in their application environment

Headquarter : 3250 Olcott Street, Santa Clara, CA 95054, United States

Product Website : https://www.couchbase.com/products/capella/

Target Market : Digital Banking, SMB, Health care, gaming, insurance, retail

Solutions : Database-as-a-Service (DBaaS)

Service Scale : Support Subscription Tiers by Severity Level, Cloud service uptime availability

ABOUT

Couchbase provides an enterprise-class, multicloud-to-edge database that offers the robust capabilities required for business-critical applications on a highly scalable and available platform. As a distributed cloud-native database, Couchbase runs in modern dynamic environments and on any cloud, either customer-managed or fully managed as a service. Couchbase is built on open standards, combining the best of NoSQL with the power and familiarity of SQL, to simplify the transition from mainframe and relational databases to distributed on-premises or cloud hosting environments.

Couchbase Capella™ is a Database-as-a-Service (DBaaS) that's fully hosted and managed by Couchbase to help reduce your database management burden and reduce your costs. Capella is the easiest and fastest way to begin with Couchbase NoSQL.

PRODUCT OVERVIEW

A. SOLUTION

NoSQL databases store data in documents rather than relational tables. Accordingly, we classify them as "not only SQL" and subdivide them by a variety of flexible data models. Types of NoSQL databases include pure document databases, key-value stores, wide-column databases, and graph databases. NoSQL databases are built from the ground up to store and process vast amounts of data at scale and support a growing number of modern businesses.

B. LIST OF PRODUCTS

Capella - Database-as-a-Service
- Maximize convenience
- Easy to start, manage, and scale
- Industry leading price-performance
- Highly available and secure

Server - Self-Managed Cloud
- Maximize control & customizability
- Leverage DBA's & OPS team skills
- Choose management strategy & tools
- Deploy via Kubernetes

Mobile - Edge & IoT
- Offline first design for max uptime
- Extreme speed and reliability
- Data integrity: secure, automated sync
- Broad SQL and device support* Precise loggings

B. ADVANTAGES OF COUCHBASE

Developers
- Familiar and flexible: SWL for JSON
- Structured: Multi-level data controls
- Dependable: Transaction support
- Programmable: 10 SDKs and UDFs
- Fast: In-memory design
- Multi-services: Build more, faster
- Distributed: Mobile, geographic & edge

Architects
- Multi services: Improve time to market
- Dependable: ACID transactions
- Structured: Multi-level data organization
- High performance & high availability
- Cloud-native: Kubernetes
- Deployability: However, Whenever

DevOps
- Self-managed in the cloud
        *Very high degree of control
        * Flexibility
- Fully-managed in the cloud
        * For convenience
        * Speed to start
        * Smaller teams

Advantages of Couchbase for You

Flexibility of NoSQL fused with strengths of RDBMS

Developers

- **Familiar and flexible:** SQL for JSON
- **Structured:** Multi-level data controls
- **Dependable:** Transaction support
- **Programmable:** 10 SDKs and UDFs
- **Fast:** In-memory design
- **Multi services:** Build more, faster
- **Distributed:** Mobile, geographic & edge

A simple platform to design sophisticated, scalable applications

Architects

- **Multi services:** Improve time to market
- **Dependable:** ACID transactions
- **Structured:** Multi-level data organization
- **High performance & high availability**
- **Cloud-native:** Kubernetes
- **Deployability:** However, Wherever

Rapidly develop, test and deploy via cloud-native automation

DevOps

- **Self-managed in the cloud**
  - Very high degree of control
  - Flexibility
- **Fully-managed in the cloud**
  - For convenience
  - Speed to start
  - Smaller teams

Market Expansion: Tech Data and SVA Distribution have been selected to support Couchbase in Southeast Asia and Greater China, effectively expanding Couchbase's presence in these markets. This indicates their capability to penetrate and serve these regions.Geographic Reach: Tech Data is responsible for distribution in Singapore, Malaysia, Indonesia, and Vietnam, while SVA Distribution focuses on Hong Kong, Taiwan, and Macau. Their combined reach covers a wide geographic area, providing extensive coverage for customers in these regions.

Digital Transformation Enablement: The collaboration aims to support enterprises in shifting to the digital economy by offering Couchbase's Capella, a distributed NoSQL database as a fully managed service. This positions the partnership as a catalyst for businesses looking to embrace digital transformation.Scalable Database Solutions: As noted by Bennet Wong, the vice president of Advanced Solutions at Tech Data, the partnership addresses the need for advanced and highly scalable databases. This implies that the partnership's focus is on delivering scalable and efficient database solutions tailored to modern business needs.

Agility and Adaptability: The partnership is committed to addressing the ever-changing tech needs and goals of their customers and the evolving business landscape. This focus on adaptability and agility positions them as a valuable partner for enterprises seeking flexible technology solutions.

Bridging Market Gaps: SVA Distribution, in partnership with Couchbase, aims to bridge the market gap in Hong Kong, Taiwan, and Macau as the IT landscape rapidly changes. This suggests that the partnership is attentive to the evolving technological landscape and seeks to provide relevant and cutting-edge solutions.

About CDT

PT. Central Data Technology (CDT) understands the fast pace of digital transformation and how time is a precious commodity for our customers. Hence, we commit to helping with any part of your IT transformation process in almost no time.

Product Issuer	: Akamai
Issuer's Business Type	: Network, Security, Cloud
Headquarter	: United States
Product Website	: https://www.akamai.com/
Target Market	: FSI, Media, Manufacture, E-Commerce, Public Sector
Solutions	: API & Application Protection, Cloud, Content Delivery Network, Zero Trust, Microsegmentation
Service Scale	: Enterprise, SMB

ABOUT

Akamai is the leading content delivery network (CDN) services provider for media and software delivery, cloud and security solutions. Billion people connected and access Internet every day, and Akamai has been solving the internet's toughest challenges ever since, working toward our vision of a safer and more connected world. Akamai make it easy for businesses to develop and run applications, while we keep experiences closer to users and threats farther away. Worldwide company choose Akamai to build, deliver, and secure their digital experiences. As leading security, compute, and delivery company, these solutions are helping global companies make life better for billions of people, billions of times a day.

Akamai has deployed the most pervasive, highly distributed content delivery network (CDN) with approximately 345,000 servers in more than 135 countries and over 1,300 networks around the world.

PRODUCT OVERVIEW

Security

a. Application & API Security
- App & API Protector: One-stop, zero-compromise security for websites, applications, and APIs.
- Prolexic: Stop DDoS attacks with the fastest, most effective defense at scale.
- Page Integrity Manager: Defend customer site from client-side threats, also spot and block malicious activity.
- Managed Sercurity Services: Security management, monitoring, and mitigation with full managed service approach

b. Zero Trust Security
- Akamai Guadicore Segmentation: This solution protects, visualize, and segment your assets in the data center, cloud, or hybrid cloud infrastructure.
- Enterprise Application Access: Improve workforce fast, secure access with Zero Trust Network Access
- Secure Internet Access Enterprise: Safely connect users & devices to the internet with a secure web gateway.
- Akamai MFA: Prevent employee account takeovers and data breaches with phish-proof MFA.

c. Abuse & Fraud Protection
- Bot Manager: Stop the most dangerous, evasive bots before they erode customer trust
- Account Protector : Keep fraudsters out — and trust intact — with account takeover protection
- Audience Hijacking Protector: Keep customers on your site, maximize conversion rates, and minimize affiliate fraud.
- Identity Cloud: Create seamless and secure customer experiences.

d. DDoS Protection
- Prolexic: Stop DDoS attacks with the fastest, most effective defense at scale.
- Kona Site Defender: Automate web application & API protection (WAAP) with unmatched intelligence.
- Web Application Protector: Intelligently automate and simplify your web app and API security.
- Edge DNS : Rely on highly secure DNS for nonstop availability of web apps and APIs.

Contect Delivery Network

- Application & API Performance for accelerate Apps & API with drive engagement with real-time UX data, reach more customers in more places, Deliver consistent experiences users expect.
- Media Delivery Is Solution for most media company for consistently deliver amazing streaming experiences to the largest audiences, on any device.

Edge Compute / Cloud

Serverless Computing
- Edge Worker: Create functions at the edge on the largest distributed serverless network.
- Edge KV: Supercharge your EdgeWorkers apps with a serverless key-value store.

Edge Application
- Image & Video Manager: Automatically optimize and enhance visual media for every user, on any device.
- Cloudlets: Deliver better web experiences, made easy with robust, self-serviceable apps.
- Vaccine Edge: Help people easily access up-to-the-minute vaccine info & book appointments.

Cloud Optimization

- Ion: Deliver fast, engaging, and reliable user experiences on your sites and apps.
- mPulse: Capture user experience data. Optimize website performance. Measure ROI.
- Cloud Wrapper: Save on costs and improve origin offload with a private cache footprint.
- Cloud Test: Stress test your websites and apps with robust, real-time load testing.

Cloud Computing – Linode: Cloud Computing Developers Trust for accelerating innovation with simple & affordable Linux Cloud Solution & Services, pay as you go and on demand.

Product Issuer	: Apple
Issuer's Business Type	: Consumer & Enterprise Device
Headquarter	: USA
Product Website	: www.apple.com
Target Market	: Cross Industry
Solutions	: End-Point & Mobility
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Found in 1976, Apple Inc. is an American multinational technology company that designs, develops, and sells consumer electronics, computer software, and online services. The company is selling for well-known and best-selling products such as iPhone, iPad, Mac, iPod, and many more. Apple is also considered as one of the Big Four of technology. Apple's target markets are including small and mid-sized businesses, education, enterprise and government.

PRODUCT OVERVIEW

Macbook

MacBook has an impressive capacity to store the files and run the applications you need every day. This portable notebook is designed thin and light due to its tiny components but offers customers a snappy performance with faster processor.

iMac

iMac is Apple's line of desktop and portable personal computers with macOS as operating system. iMacs offers simplicity by not requiring a multitude of wires. iMac is built to keep things simple with top performance hardware.
snappy performance with faster processor.

iPad

iPad is a line of tablet computers by Apple. The portability of the iPad doesn't stop for assisting customer's work, iPad also comes with apps that has capability of handling many of our routine tasks include a web browser notepad, a camera, and an app for playing music. The larger size and excellent screens of iPads make them superior e-readers.
snappy performance with faster processor.

iPhone

iPhone is the world's most powerful personal device and one of the best-selling smartphones developed by Apple. The iPhone has a sleek and minimalist design with innovative features that always shook up the industry. The latest iPhone is iPhone XS and iPhone XS MAX. All generations of iPhone use Apple's iOS mobile operating system software.

OTHERS

Apple Care Protection Plan

Every apple device comes with one year of hardware repair coverage through its limited warranty and up to 90 days of complimentary support. However, if customers want to extend the original warranty and enjoy free tech support plus want to protect their Apple products against accidental damage, Apple is providing AppleCare+ for customer to purchase.

Seamless Connectivity

Apple hardware, software, and services work together to deliver a seamless experience that just works. You can start a project on Mac and finish it on iPad, use your screens side by side to extend your workspace, and even draw with Apple Pencil on your iPad or use your iPhone to make live updates on your Mac. And it's all compatible with apps from Microsoft and Google, so your team has everything it needs to get any job done.

Product Issuer	: Amazon Web Service, Inc.
Issuer's Business Type	: Cloud Service Provider
Headquarter	: Seattle, Washington, United States
Product Website	: www.aws.amazon.com
Target Market	: Cross Industry
Solutions	: Cloud
Service Scale	: Small-Medium Business, Enterprise, Greenfield, Start-up Company, Public Sector, Multinational Company

ABOUT

Amazon Web Services (AWS) offers a broad set of global cloud-based products including compute, storage, databases, analytics, networking, mobile, developer tools, management tools, IoT, security, and enterprise applications: on-demand, available in seconds, with pay-as-you-go pricing. From data warehousing to deployment tools, directories to content delivery, over 200 AWS services are available. New services can be provisioned quickly, without the upfront fixed expense.

AWS has been named as a Leader for the eleventh consecutive year and has secured the highest and furthest position on the ability to execute and completeness of vision axes in the 2021 Magic Quadrant for Cloud Infrastructure and Platform Services.
With the largest economy in Southeast Asia, the AWS Asia Pacific (Jakarta) Region is our tenth region in Asia Pacific and the second in Southeast Asia after Singapore. With three Availability Zones (AZs), the Jakarta Region provides our customers and partners the ability to run workloads, store data securely, and innovate faster, locally.

PRODUCT OVERVIEW

Compute

AWS offers a comprehensive portfolio of computing services allowing you to develop, deploy, run, and scale your applications and workloads.

Amazon EC2 | Amazon EC2 Auto Scaling | Amazon Lightsail | AWS Batch | AWS Elastic Beanstalk | AWS Lambda | AWS Outposts | AWS Serverless Application Repository | AWS Wavelength | VMWare Cloud on AWS

Database

AWS offers the broadest range of databases purpose-built for your specific application use cases.

Amazon Aurora | Amazon DocumentDB | Amazon DynamoDB | Amazon ElastiChace | Amazon Keyspaces | Amazon Neptune| Amazon QLDB | Amazon RDS | Amazon Redshift| Amazon Timestream | AWS Database Migration Service

DevOps

The AWS Developer Tools is a set of services designed to enable developers and IT operations professionals practicing DevOps to rapidly and safely deliver software.

Amazon CodeGuru | Amazon Corretto | AWS CDK | AWS Cloud9 | AWS CodeArtifact | AWS CodeBuild| AWS CodeCommit | AWS CodeDeploy | AWS CodePipeline | AWS CodeStar | AWS Command Line Interface | AWS Device Farm | AWS Tools and SDKs | AWS X-Ray

IoT

AWS IoT provides broad and deep functionality, spanning the edge to the cloud, so you can build IoT solutions for virtually any use case across a wide range of devices.

AWS IoT 1-Click | AWS IoT Analytics | AWS IoT Button | AWS IoT Core| AWS IoT Device Defender | AWS IoT Device Management | AWS IoT Events| AWS IoT Greengrass | AWS IoT SiteWise | AWS IoT Things Graph | AWS Partner Device Catalog | Free RTOS

Storage

AWS offers a complete range of services for you to store, access, govern, and analyze your data from object, file, and block storage services, backup, and data migration options

AWS S3 | AWS File System | AWS FSx for Windows File Server | AWS FSx for Lustre | AWS Elastic Block Storage | AWS Backup| AWS Storage Gateway | AWS DataSync | A WS Transfer Family | AWS Snow Family

OTHERS

SAP on AWS

Whether you're looking to lift and shift your SAP landscapes to reduce costs, go beyond infrastructure to innovate around your core lines of business, or modernize on SAP S/4HANA, AWS can accelerate your SAP transformation with high performance, reliability, and cost optimized

Disaster Recovery on AWS

AWS cloud not only makes it cost-effective to do DR in the cloud but also makes it easy, secure and reliable. With APIs and right automation in place, you can fire up and test whether you DR solution really works (and do that every month, if you like) and be prepared ahead of time. You can reduce your recovery times by quickly provisioning pre-configured resources when you need them or cutover to already provisioned DR site (and then scaling gradually as you need).

Migration

AWS is helping thousands of organizations, including enterprises successfully migrate significant workloads to the cloud with IT costs savings, as well as improvements in productivity, business agility, and operational resilience benefit. Migrations to AWS include moving any workload from an on-premises environment, hosting facility, or other public cloud. AWS is working with thousands of organizations to migrate workloads such as applications, websites, databases, storage, physical or virtual servers, or entire data centers, so that you can gain business benefits faster.

Backup and Restore

The exponential growth of data worldwide has made managing backups more difficult than ever before. With traditional methods such as tape libraries and secondary sites falling behind, many organizations are extending backup targets to the cloud. While the cloud offers better scalability, building cloud-enabled backup solutions requires careful consideration of existing IT investments, recovery objectives, and available resources with highly durable, flexible & scalable, cost efficient, support all data types , with highly secure services

CDT Exclusive Offer:

- **Free Consultation**
  Provide one to one consultation based on your business plan objective within AWS Infrastructure. This consultation is not included hands-on session.

- **Free Best Practices Technical Assessment**
  We help determine which workload are ready to move to the cloud in what fashion and give organization proper roadmap as well as guidance to optimizing your best practices cloud journey with AWS.

- **Free Credit for any migration workload ***
  ** Terms and Condition Applied

Product Issuer	: Dynatrace
Issuer's Business Type	: Unified Deep Observability, AIOps, and Application Security Company
Headquarter	: USA
Product Website	: www.dynatrace.com
Target Market	: Cross Industry
Solutions	: Deep Observability, App Security, Monitoring, Automation, Business Analytics
Service Scale	: SMA, Large enterprises

ABOUT

Dynatrace is a revolutionary platform that analyzes and automates to deliver unified monitoring and security. The Dynatrace platform approach will help you solve a wide variety of use case areas, and it will grow and adapt to solve new challenges, while already enriching many areas of any organization. Our solutions in the areas of observability, security, analytics and automation address the widest range of use cases. And because our platform powers it all, you can create any unique use case to meet ever-changing needs.

Revenue and Orders
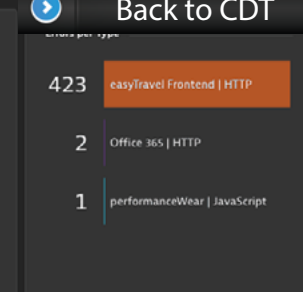

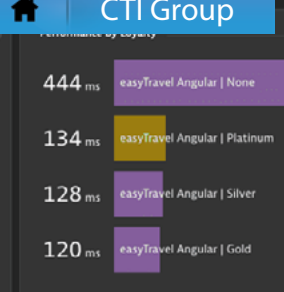

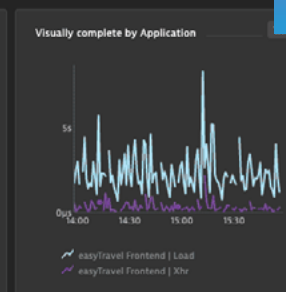

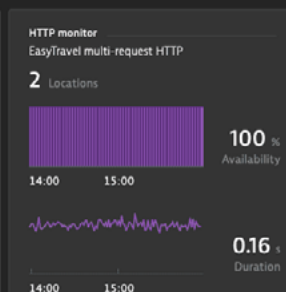

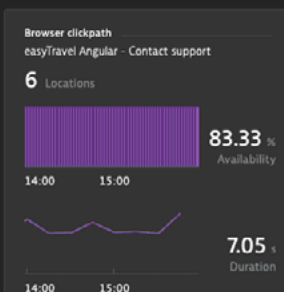

Infrastructure

PRODUCT OVERVIEW

- **Full-stack monitoring:** advanced observability for apps and infrastructure across hybrid and multi-clouds at scale
- **Infrastructure Monitoring:** advanced observability for cloud platforms, containers, and data center technologies
- **Digital Experience Monitoring:** optimize user experiences across mobile, web, hybrid, and IoT applications
- **Application Security:** runtime application vulnerability detection, optimized for the cloud and kubernetes
- **Open Ingestion:** extend observability with log monitoring, custom metrics and events, and serverless functions traces
- **Cloud automation:** cloud native application life-cycle orchestration

Why Dynatrace?

* Outstanding Recognition

- Gartner positioned Dynatrace highest in Ability to Execute and highest in Completeness of Vision in the 2023 Magic Quadrant for Application Performance Monitoring and Observability.

- In 2022, ISG positioned Dynatrace as the leader in cloud-native observability.

- Received the highest scores in the "Current Offering" and "Strategy" categories in the Forrester Wave AIOps Q4 2022 report.

* High-Quality Automation and AI

Dynatrace can increase throughput, speed, and quality across the software development lifecycle while automating and securing DevOps pipelines. Its AI engine can improve business operations by predicting and fixing problems before they affect users.

* Consistent Experience

To ensure a consistent customer experience, Dynatrace APM and Observability can run across a wide range of applications and infrastructure in hybrid and multi-cloud environments.

Product Issuer	: Entrust
Issuer's Business Type	: Security and Identify Platform for Cloud and on premise
Headquarter	: USA
Product Website	: www.entrust.com
Target Market	: Cross Industry
Solutions	: Identification, Authentication and Transaction Security
Service Scale	: SMA, Large Enterprises

ABOUT

Consumers, citizens and employees increasingly expect anywhere-anytime experiences — whether they are making purchases, crossing borders, accessing e-gov services or logging onto corporate networks. Entrust offers the trusted identity and secure issuance technologies that make those experiences reliable and secure. Solutions range from the physical world of financial cards, passports and ID cards to the digital realm of authentication, certificates, hardware security modules and secure communications. With more than 2,500 Entrust colleagues around the world, and a network of strong global partners, the company serves customers in 150 countries worldwide.

PRODUCT OVERVIEW

Identity and Access Management

Entrust Identity is the IAM portfolio that provides the strong foundation you need to realize a Zero Trust framework. And as one unified IAM portfolio, Entrust Identity supports an unparalleled number of use cases and deployment options.

• Flexible Deployment, Broad Capabilities

Entrust Identity can be deployed in the cloud, on-premises, or as a virtual appliance, and it can be delivered as a managed service.

• Zero Trust Framework

As one unified IAM portfolio, Entrust Identity supports an unparalleled number of use cases and deployment options.

• A secure, productive workforce

Entrust Identity covers the spectrum of workforce IAM solutions, from best-in-class MFA to high assurance credential-based passwordless authentication.

• Secure, Frictionless Communications

Connect with your consumers and citizens via secure portals, best-in-class MFA, adaptive step-up authentication, and identity proofing, on-premises or in the cloud.

• Platform Integrations

Our authentication portfolio offers pre-built integrations with a majority of leading on-premises and cloud applications. We also integrate seamlessly with your existing infrastructure, allowing you to leverage existing directories — such as AD or LDAP — to build a central repository for user identities.

Product Issuer	: F5
Issuer's Business Type	: Network & Security
Headquarter	: USA
Product Website	: www.f5.com
Target Market	: Cross Industry
Solutions	: Hardware, Software & IS/Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

F5 Networks is a global company that specializes in application services and application delivery networking. With more than 20 years of experience, F5 provides the broadest set of services and security for enterprise-grade apps. F5 application services ensure that applications are always secure and perform the way they should in any environment and on any device to improve enterprise's productivity.

SOLUTION OVERVIEW

App Security
Protect your data
Today, apps are your business. With this app-centric environment come new risks—over 80 percent of data breaches now occur at the app level. Protecting your data, and your business requires integrated security solutions to defend critical areas of risk.

Traffic Management
Optimize app performance
Customers expect fast, uninterrupted access to rich, dynamic applications wherever they are. Employees expect the same. Load balancing, security, performance, and management services all play into meeting those expectations.

Cloud
Consistent app services in any cloud
By deploying F5 services with your cloud-based apps, you can apply the same enterprise-grade load balancing, DNS services, web application firewalls, access control, application-level security, and policies found in on-premises environments. Your clouds might change, but your F5 app services will follow.

Automation and Orchestration
Speed up app deployments
Optimization is about making IT and the business faster—but it starts with enabling IT and the business to get smarter. Whether your apps are in the cloud, data centers, or both, automation and orchestration deliver the speed and scale today's organizations need.

Service Provider
Monetize, optimize, and secure your network
As the digital revolution continues, consumers and enterprises are more reliant than ever on service providers to keep them connected. F5 offers carrier-grade solutions that help you optimize and monetize your current infrastructure, so you can implement new services quickly, keeping your network competitive and increasing profits.

Product Issuer	: Hitachi Vantara
Issuer's Business Type	: Data Management Infrastructure, IoT and Services
Headquarter	: USA
Product Website	: ww.hitachivantara.com
Target Market	: Cross Industry
Solutions	: Digital Infrastructure (hardware, software, application), Digital Solutions (Pentaho, Lumada, Video Intelligence), and Services
Service Scale	: SMEs and Large Enterprises

ABOUT

Hitachi Vantara, a wholly-owned subsidiary of Hitachi, Ltd., guides our customers from what's now to what's next by solving their digital challenges. Working alongside each customer, we apply our unmatched industrial and digital capabilities to their data and applications to benefit both business and society. More than 80% of the Fortune 100 trust Hitachi Vantara to help them develop new revenue streams, unlock competitive advantages, lower costs, enhance customer experiences, and deliver social and environmental value.

Since its founding in 1910, Hitachi has almost 110 years of OT experience and almost 60 years in IT. The company has maintained the same corporate mission with its continuous innovation and passion: Contribute to society through the development of superior, original technology and products. Hitachi is committed to help customers in developing new revenue streams, unlocking competitive advantages, optimizing costs, enhancing customer experiences, and delivering social and environmental value.
 Hitachi Vantara vision remains unchanged: to help customers extract more value from their data and improve their businesses, while powering good for society, and also offers the best range of solutions from storage systems, data protection, converged and hyper-converged infrastructure, multi-cloud acceleration, data management analytics, IoT, video intelligence and consulting services.

PRODUCT OVERVIEW

Disaster Recovery, Data Backup, and Data Protection

Data loss can be caused by human error or unexpected events such as natural disasters and cyberattacks. Experiencing such events can have a negative impact on business. Thus, having a data protection and disaster recovery solution is important. Hitachi Vantara provides broad disaster recovery, data backup, and data protection solutions that are ideal for any business.

Object Storage

Hitachi Vantara object storage is an intelligent and integrated approach to bridges the gap between traditional and cloud technologies for a greater return on your data. Free data from silos and deliver visibility and control within your organization with the Hitachi Content Platform (HCP) portfolio. Modernize, centralize and manage data across use cases and data types to fuel business insights and gain a competitive advantage, while ensuring proper data governance.

Data Management and Analytics

Innovate faster with data management products for analytics, AI and data integration, and build your DataOps practice. Simplify your data operations and deliver information access for all your enterprise stakeholders with policy-based automation and metadata-driven data management.

Storage

As the amount of data continues to grow, the need for a scalable, and enterprise-grade storage is essential for business in all industries. Hitachi Vantara offers a wide range of storage portfolios, ranging from hybrid and all-flash to network attach storage. It deliver a complete onsite-to-cloud solution while reducing operational costs.

Converged and Hyperconverged Infrastructure

Optimize and adapt your data center and hybrid cloud with data insights to help IT evolve from a service provider to trusted business advisor. With Hitachi Vantara converged and hyperconverged infrastructure, your business will get the agility you need to survive in the modern era. By harnessing the value of your data, through a flexible, automated hybrid cloud environment.

IoT

Accelerate your success with data-driven applications and technologies from Hitachi's Lumada solutions for digital innovation. Enable your internet of things (IoT) solution to deliver high-value outcomes. Use the power of actionable data insights from Lumada applications, edge intelligence and co-creation services.

Hitachi Virtual Storage Platform G130 Storage

Combining storage array with Hi-Track Remote Monitoring system and its analytics capabilities allows us to provide the best portfolio to proactively analyze, support and maintain the health of your cloud solutions. For customers in Indonesia, Hitachi Virtual Storage Platform G130 Storage can only be acquire at CDT.

Features:

• Operational Efficiency
The benefits start with Hitachi Storage Virtualization Operating System RF (SVOS RF). With an all-new enhanced software stack, SVOS RF offers up to three times greater performance than our previous midrange models, even as data capacity scales.

• Private Cloud Platform
VSP G130 supports OpenStack drivers for offering a cloud-like experience to business users. This model also offers support for containers to allow DevOps to accelerate cloud-native application development.

• Simplify Modernization of Your Data Center
The VSP G130 midrange system comes bundled with system management and local replication software. Organizations have the option to purchase enhanced software features, including infrastructure performance analytics, predictive analytics and Hitachi Data Instance Director (HDID) for data protection and backup orchestration.

Solutions : Analytics & Business Intelligence, Mobile, HyperIntelligence
Service Scale : Small Medium and Enterprise Business, Multinational
  Company

ABOUT

In 1989, MicroStrategy was founded on the principle that the future belongs to organizations that effectively harness the power of their data. This vision has driven us from day one to deliver world-class software and services that redefine what's possible and help transform our customers on their journey to becoming the Intelligent EnterpriseTM. We provide powerful software solutions and expert services that empower every individual with actionable intelligence, helping enterprises unleash the full potential of their people and investments. Our analytics and mobility platform delivers high-performance business applications that meet the needs of both business and IT.

PRODUCT OVERVIEW

Hyperintelligence

Dashboards aren't enough. Empower the experts in your organization to deploy contextual insight to any website, screen, wall, device, or application. Whether you're answering emails or scrolling through a website, you can get answers in real time without interrupting your workflow, no clicks required. HyperIntelligence will change how you work. For the first time, you don't have to go looking for insights, they come to you. With HyperIntelligence™, zero-click insights are now available everywhere, all the time, for everyone.

Modern Analytics

Whether you want to instantly deliver personalized reports to thousands of users, empower business users with self-service analytics, or boost analytics adoption to 100 across your enterprise, MicroStrategy provides the technology to make it happen. MicroStrategy's powerful analytical engine, comprehensive toolsets, variety of data connectors, and scalable, open architecture ensure you have everything you need to extend access to analytics across every team and business function.

Open Architecture

MicroStrategy give you freedom to connect tools and platforms you love, you can gives data scientists access to governed, trusted business data and simplified deployment for large-scale, sophisticated machine learning or predictive analytics applications. MicroStrategy can be use as component in your portal also you can customize and reskin application on web to include unique and branded workflows.

Enterprise Platform

MicroStrategy introduces more ways to turn insight into impact. Blend and analyze all your data and leverage third-party systems and existing investments. Deploy powerful applications at scale and deliver a single version of truth across your organization. MicroStrategy provides the tools that developers, architects, and administrators need to simplify and accelerate processes at every level of an analytics deployment, from creating the object-oriented infrastructure, to building and distributing world class intelligence applications, to monitoring and managing the full life cycle of any project.

PRODUCT OVERVIEW

Mobile

Instantly deploy analytics to mobile devices. Leverage existing visualizations, reports, and dashboards to instantly deploy mobile analytics. By putting real-time insights in employees' hands with mobile reporting, analytics, and monitoring, organizations empower employees to make better decisions from any location, on any iOS or Android device.

Cloud

The MicroStrategy Cloud Platform delivers everything you need to deploy secure, scalable, flexible, and extensible cloud solutions that meet the business and IT needs of your entire organization. Skip the legwork and tap into the industry's leading enterprise analytics and mobility platform in a matter of minutes.

Issuer's Business Type	: Cloud Managed Services
Headquarter	: Jakarta, Indonesia
Product Website	: ncc.centraldatatech.com
Target Market	: Cross Industry
Solutions	: Cloud Management Platform
Service Scale	: Small-Medium Business, Enterprise, Greenfield, Start-up Company, Public Sector, Multinational Company

ABOUT

The advancement of cloud computing is getting faster. As it rapidly grows, it requires extensive knowledge and expertise to manage the cloud's benefit to the highest. To accommodate this, PT Central Data Technology developed the Nebula Cloud Console (NCC) as a fast track for adopting cloud.

We understand that managing cloud features is complicated, so that Nebula Cloud Console (NCC) comes with the ability to make your cloud management experience as easy as moving a finger and gives Customer the freedom to adjust the cloud performance according to business needs.

PRODUCT OVERVIEW

Key Features:

Multiple Account Management
Get the convenience of managing multiple AWS accounts to enhance productivity and time effectiveness.

Single Dashboard for Cloud Health Check
Monitor your cloud resources without complicated configurations while getting reliable data.

Budget Control & Billing Management Console
Get the details and ease of budgeting for every cloud service subscribed and other applicable fees with high transparency.

Integrated with Notification and Alarm Center
Control your cloud usage by setting parameters to each cloud service to mitigate issues in operating services and immediately receive notifications.

Single Dashboard for Support Ticket
Support for preventive maintenance, corrective maintenance, subscribe new services, and account & billing related.

Supported:
• Certified Technical & Sales Team
• Customer Response Center 24 x 7
• Various Selection of Package based on customer needs
• Provide documentation based on cloud best practice

Headquarter	: Jakarta, Indonesia
Product Website	: www.nodeflux.io
Target Market	: Cross Industry
Solutions	: Video Analytics based on Artificial Intelligence
Service Scale	: SME, Large Enterprises, Education

ABOUT

Nodeflux is an Indonesian vision AI company based in Jakarta. Established in 2016 as a Big Data startup, Nodeflux has been compiling a list of proven track records as we build significant milestones through achievement, recognition, and value-added impact. Nodeflux core focus is developing deep learning computer vision to provide Intelligent Video Analytics solutions, toward complex issues faced by multi sectoral industries and modern society.

PRODUCT OVERVIEW

VisionAIre

VisionAIre is a platform that we developed as a results of years of research and development coupled with constant learning and experiment in implementing various use-cases. As a platform, VisionAIre is designed to be easily integrated, flexible, and with evolving capabilities in mind. VisionAIre is designed to be easily intergrated, flexible and with evolving capabilities in mind.

Nodeflux Solutions:

1. Road Traffic Monitoring
Monitor traffic in your area from CCTV on the street to give responsive and better traffic management for public.

2. Plate Base compliance
Optimizing government tax earnings by detecting various of uncaptured tax sources

3. Mass Traffic Solution
Can be used as a reference for managing a crowd and people who are in an area with limited access.

4. HRIS Employee Attendance
One-Stop solution for HRIS and government employees in Indonesia. Increase productivity to serve the community better and more effectively.

5. All in One Surveillance
Maximum surveillance in one dashboard.

6. Visitor Management System
Detects & counting visitor in certain area.

7. Smart Parking
Easy parking system to increase efficiency with AI.

8. Face Payment
Increase speed of payment process with face authentication.

9. Retail Traffic
Provide insight on retail industry.

Service Scale	: Enterprise

ABOUT

Zscaler, creator of the Zero Trust Exchange platform, uses the largest security cloud on the planet to make doing business and navigating change a simpler, faster, and more productive experience.

The Zscaler Zero Trust Exchange™ is a cloud native platform that powers a complete security service edge (SSE) to connect users, workloads, and devices without putting them on the corporate network. It reduces the security risks and complexity associated with perimeter-based security solutions that extend the network, expand the attack surface, increase the risk of lateral threat movement, and fail to prevent data loss.

Zscaler: Four integrated and comprehensive solutions

Zscaler Internet Access

Zscaler Internet AccessTM defines safe, fast internet and SaaS access with the industry's first and only AI-powered security service edge (SSE) platform.

Zscaler Private Access

Empower your hybrid workforce with fast, secure, and reliable access to private apps with the industry's only next-generation ZTNA

Zscaler Digital Experience

helps IT teams monitor digital experiences from the end user perspective to optimize performance and rapidly fix offending application, network, and device issues.

Zscaler Cloud Protection

Secure cloud security posture
Continuous inventory and remediation of all services in cloud platforms (Azure, AWS, GCP) and SaaS apps

Secure user access to cloud workloads
Zero trust provides user access with no exposed attack surface and no VPNs

Secure app-to-app communication
Secures and simplifies workload communications to the internet, data centers, and across clouds

Elimination of lateral threat movement
App identity and ML automation simplify microsegmentation and stop east-west propagation of threats.

CDT SERVICES

CDT also develop capabilities to serve customers, supporting their business. CDT has a team of IT specialists who are ready to provide services to the technical standards of the principal and are experienced with various technologies.

With more than 40 technical professionals, and more than 70 certified skills, the use of IT service management methodologies according to ITIL standards, demo center with the latest technology, and customer response center (helpdesk) with a global standard methods (ISO), as well as a knowledge management system. CDT ensure customer satisfaction for IT services to help them achieve their goals.

SERVICES CATALOGUE

Deployment & Implementation
To support, assist and perform assessment, creating design and planning, installation, deployment for major technologies starting form infrastructure to platform both on premises or cloud bases

Maintenance
Consist of preventive to do regular health check, examine, noticing minor issues, and fixing them to achieve minimize downtime. We aim to; enhance the solution productive life, reduce critical breakdowns, and minimize production loss due to solution failure. And corrective to perform fast and effective break-fixing for unexpected breakdowns and reduced duration of both planned and unplanned downtimes.

Managed Operation
To support, assist and perform daily activity bases such as monitoring, preventive maintenance, changes request, layer-1 support, and maintain & managed entire both part or full lifecycle IT technology. This services can do in business hours or 24 hours. Managed operation can help customer to do more strategic activity, worried-less lost skilled staff, lower operational cost.

Customized
CDT can handle special requests for services such as data center relocation, hands-on training, knowledge sharing, performance tuning, migration, workshops, multi-vendor support and so on.

About DNS

Defender Nusa Semesta (DNS) is an integrated IT security provider with goals to improve information security levels of our business clients to higher and acceptable levels. Our brand name is Defenxor, originated from the word 'Defensor', which is a Latin word for Guardian, or protector. Defenxor delivers innovative and effective solutions to customers and clients in three main areas: Managed Security Services, IT/Cyber Security Consulting, and Security Infrastructure Integration.

Defenxor has established alliances with leading security platforms, IT infrastructure distribution channel networks, industry analysts, and local security communities to enable the delivery of comprehensive and cost ecient solutions that are tailored specially to each client's business environment and goals.

Our core team has collectively over 35 years experiences in the security eld, with hundreds of security consulting projects in the government and private sectors. Defenxor is also a subsidiary of CTI Group a leading IT infrastructure solution provider in Indonesia, which has market coverage in Malaysia and Philippines.

Defenxor   Defender Nusa Semesta   @defenxor

PRODUCT OVERVIEW

Defenxor Intelligence Managed Security (DIMS)

DIMS helps you to leave complexity behind by adopting managed security concepts. We provide security experts who rmly adhere to industry standard of security technology. Within DIMS, we managed IT security function on client's side by providing log management and collection, network and security forensics, up to incident handling and management. DIMS' features help you improve your security posture and maximize your investment in security technology.

MAIN FEATURES

Advanced Security Operations Center (SOC) to Protect Your Business
Provide remote monitoring, management of IT security functions even without personnel on-site.

Around-the-clock Protection, that Simply Never Sleeps
24 hours a day for 365 days security, periodic reporting, and instant alert for threats.

Highly Standardized Technology
We only use high standard technology that fully comply with existing IT Security technologies and requirements.

Defenxor Security Appliances (DSA)
Defenxor Security Appliance (DSA) is installed in the collect and manage logs from multiple sources. The appliance also has the ability to analyze network packets for threat detection and threats and for forensic purposes.

Defenxor Case Management Mobile Application
Provide both Android and iOS applications to support your mobility; see reports and security status even faster, gain new insights and communicate directly with us.

Bundled Services
DIMS also can be bundled with technologies by CTI subsidiaries as holistic approach on adopting IT Security.

White-Labeling Support
Our business partner can leverage their security offering by adding additional Managed Service to their customer, providing additional value for them.

Additional Services Available
We also provide Incident Response (IR) and Security Device Management (SDM) to enhance your security posture.

Mobile Apps

Access online analyst, monitor our progress, and be notified on

Security Surveillance

24/7 monitoring of security events by qualified analysts.

Incident Response & Management

React quickly to reduce impact of breaches and data losses.

Log Collection and Management

Collect, correlate, and analyse logs using SIEM and full-text search technologies.

Vulnerability Management

Proactively discover weaknesses and track their resolutions.

Network data capture & forensic

Network traffic capture for threat finding and forensic purposes.

People

24/7

The million dollar question that every business should ask today: "Is my business safe?" DISC is able to evaluate whether your business is safe or not refer to the right measurements. Our security consulting helps you to find out if your business is safe or compromised. DISC includes penetration test, vulnerability assessment, and wide range of IT consulting services. By providing consultancy services related to various ISO and Certifications/ Compliance, DISC helps to make your system more secured.

MAIN FEATURES

Security Policy Development & Deployment
With increasingly high adoption of BYOD and BYOA, policies can make or break the security of your business. Reduce risks by dening the correct policies and enforcing it optimally.

Security Auditing
Don't know whether your security posture already meet established criteria? Security Audit can help you evaluate your current posture and identify the gaps between real condition and those criteria.

Security Assistance
We provide assistance for your internal IT security team to improve their capabilities and ensuring that every implementation is up to standard. We also provide assistance for developing and delivering your internal Security Operation Center to achieve its dened goals.

Incident Response & Management
Lightning-fast response and mitigation procedures for incidents, and when combined with our DIMS solution, we provide a holistic security approach that will keep your business running smoothly in the process.

Penetration Testing & Compromised Testing
We conduct through testing, conforming to international standards and frameworks, to ensure that your business is free from vulnerabilities at all times.

Security Certication
Whether PCI-DSS or ISO 27000 Certication, our team can assist you to achieve those compliance.

DISI (Defenxor Intelligence Security Integrator)

DISI provides IT Security related to product implementation to support client's various needs. We offer installment which includes Managed Security Services to create an efficient solution. Within DISI, we provide Security that not only cost efficient but also effortless to manage, it makes our clients able to focus more on achieving their goals.

MAIN FEATURES

Technology Change and Benefit Review
Pre and post-implementation review to ensure you have a better security posture by deploying technology with us.

Additional Managed Services
We provide monitoring and management of security function, bundled with purchase of products from us.

Additional Managed Services
We provide monitoring and management of security function, bundled with purchase of products from us.

PRODUCT OVERVIEW

Cloudflare's architecture gives an integrated set of L3-L7 network services, all accessible from a single dashboard. It is designed to run every service on every server in every data center across our global network. It also gives your developers a flexible, Internet-scale platform to deploy serverless code instantly across the globe. No software or hardware is required. Simple to set up, use, and maintain.

SASE
Cloudflare's Secure Access Service Edge that delivers network as a service (NaaS) with Zero Trust security built-in.
• Cloudflare One

Application Services
Make the massive Cloudflare Global Network your security Gateway
• Application Security
• Application Performance

Zero Trust Services
Cloudflare Zero Trust reduces risks, increases visibility, and eliminates complexity as employees connect to applications and the Internet.
• Cloudflare Zero Trust
• Access
• Gateway
• Browser Isolation

Built-in, Including Magic Firewall from Cloudflare
• Magic WAN
• Magic Transit
• Magic Firewall
• Network Interconnect
• Argo Smart Routing
• Spectrum (TCP/UDP)

Specialty & uniqueness
Network scale and performance
Cloudflare has more than 200 points of presence worldwide, all of them offering our full product stack. Our network operates within 100ms for 99% of the global population.

Continuous innovation
We are the industry's first universal forwarder that allows security and protection for both apps and users.

Security at scale
We leverage shared intelligence from across our network to counteract cyber attacks at a massive scale.

Cloud native, multi-cloud
Cloudflare is the only cloud-native network to give enterprise-grade control and visibility into on- premise, hybrid, and multi-cloud architectures.

DARKTRACE

Product Issuer	: DarkTrace
Issuer's Business Type	: Cyber security, Cyber Defense, Information Security, Intelligence, Information Technology, Machine Learning

Service Scale	: SEM, Enterprise, & Multinational Company

ABOUT

Darktrace is named 'Best Security Company of the Year' in the Info Security Products Guide 2016, Darktrace is one of the world's leading cyber threat defense companies.Its Enterprise Immune System technology detects and responds to previously unidentified threats, powered by machine learning and mathematics developed by specialists from the University of Cambridge. Without using rules or signatures, Darktrace is uniquely capable of understanding the 'pattern of life' of every device, user and network within an organization, and defends against evolving threats that bypass all other systems. Some of the world's largest corporations rely on Darktrace's self-learning technology in sectors including energy and utilities, financial services, telecommunications, healthcare, manufacturing, retail and transportation.

HELIOS INFORMATIKA NUSANTARA
a member of CTI Group
CTI Digital Handbook
HELIOS Digital Handbook - HELIOS Portfolio - Darktrace

112

PRODUCT OVERVIEW

Enterprise Immune System
The Enterprise Immune System learns normal 'patterns of life' to discover unpredictable cyber-threats, while delivering complete visibility across your dynamic workforce — from cloud and collaboration tools to endpoints and the corporate network.

Industrial Immune System
Darktrace's Industrial Immune System illuminates even the most complex cyber-physical ecosystems, detecting novel threats and vulnerabilities, and safeguarding the integrity and resilience of industrial technologies.

Darktrace Antigena
Darktrace Antigena brings our unique Autonomous Response technology to the enterprise, with a range of market-leading security products that deliver proactive cyber defense to all parts of the digital infrastructure.

Cyber AI Analyst
Cyber AI Analyst is Darktrace's AI investigation technology, which automatically triages, interprets, and reports on the full scope of security incidents.

OFFERS
Network
Traditional defenses fail to detect novel attacks that blend into the noise of the network and sweep through complex infrastructures in seconds. Informed by an evolving understanding of your business, Darktrace Antigena neutralizes the full range of threats inside your network.

• **Machine-speed ransomware**
Early signs of ransomware trigger an immediate response
• **Insider data theft**
Identifies malicious data transfers and contains the threat
• **Unknown unknowns**
Detects all anomalous behavior indicative of signatureless and never-before-seen cyber-attacks

Cloud

As working patterns evolve and organizations embrace multi-cloud platforms and remote locations, the way we protect the cloud must evolve too. Darktrace Antigena enables organizations to benefit from Self-Learning AI across cloud and hybrid cloud environments.

With Autonomous Response technology, Darktrace Antigena takes dynamic action in seconds to neutralize unpredictable attacks in cloud and collaboration tools.

• Data exfiltration
Stops all types of malicious communication, interrupting suspicious file transfers and data breaches
• Crypto-mining
Detects malicious crypto-mining and responds to curb the activity
• API vulnerabilities
Protects unsecured APIs by cutting off any malicious connections

Email

94% of cyber-attacks begin in the inbox. As organizations continue to rely on email as the main collaboration tool for the workplace, companies need email security technology they can trust.

Darktrace Antigena takes autonomous, targeted action to neutralize advanced email attacks, intervening to protect employees from spear phishing and other threats.

o Advanced spear phishing and digital fakes
Protects the workforce from email impersonation attacks, however convincing

o Compromised accounts
Dynamic understanding of every user identifies and stops account takeover

o Domain spoofing
Recognizes visually similar domains and solicitation attempts
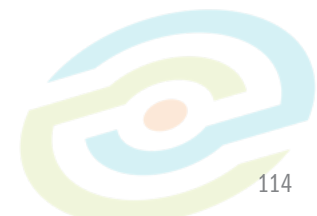

GrabforBusiness

Product Issuer   : Grab for Business From Helios
Issuer's Business Type : Business Operational Solution
Headquarter   : Singapore
Product Website   : https://www.grab.com/id/business/
Target Market   : All Industry
Solutions   : Business Transport, Business Delivery, Business Food
Service Scale   : SME, Enterprise & Multinational Company

ABOUT

A unified digital platform to manage your everyday business needs from Grab, a leading
superapp in Southeast Asia, providing everyday services such as mobility, deliveries and digital financial services to millions of
Southeast Asians.

PRODUCT OVERVIEW

• Business Transport (GrabCar and GrabBike)
Business people will get online transportation services to support work trips such as visits, meetings, or other needs.

• Business Delivery (GrabExpress)
Business people will get delivery services for goods, documents, parcels, event merchandise, or other shipping needs to make logistics delivery easier.

• Business Food (GrabFood and GrabMart)
Business people can also order food online via GrabFood for meeting consumption needs at the office or online. Likewise with GrabMart, which can help business people fulfill their food shopping needs, hampers or office needs for Office Stationery.

Benefits of Registering Grab for Business Services through Helios

• Grab for Business Portal & Dedicated Support
By becoming a part of Grab for Business with Helios, business people will get portal access to see how the company's operational costs are used in transportation services, delivery logistics, consumption, and other costs. And there will be dedicated support from Helios team.

• Corporate Billing Facility and Terms of Payment
In the Grab for Business payment system with Helios, business people are provided with Corporate Billing service facilities and Terms of Payment which will facilitate transaction activities on the Grab for Business service.

• Flexible Limits and Minimum Deposit
Business people can also determine and adjust limits and deposits flexibly, according to the needs and capabilities of the company.

Product Issuer	: Helios Mobility Suite
Issuer's Business Type	: Enterprise Mobility Management
Headquarter	: Indonesia
Product Website	: www.mobility.helios.id
Target Market	: Cross Industry
Solutions	: HMS Corporate Owned & BYOD
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Helios Mobility Suite (HMS) is an enterprise mobility solutions that are designed and developed based on the challenges that our customers facing in enterprise mobility adoption. HMS can address the issues about mobile security and device management, as well as increase the productivity of field workers or sellers. It provides end-to-end solutions, from configuring, managing and securing your mobile devices. It can easily integrates with your mobile applications. With Helios Mobility Suite, you can keep innovating your business through mobile solutions without hassle.

PRODUCT OVERVIEW

HMS Corporate Owned Devices

End Point Management
Managing and monitoring a huge number of corporate mobile devices have been an all-time challenge for most of enterprises.

HMS offers a solution to prevent data leakage by blocking the application access for a certain period of time if the device is not properly protected or not connected to the controlling system.

Corporate AppStore
Ensure all corporate applications can only be accessed and downloaded by your employees privately with Corporate AppStore.

HMS with its Application and Content Management module helps enterprises automatically install and update the corporate mobile applications without users even noticing.

Data Usage Management
 HMS Data Usage is an effective tool for organizations to managing the data usage on their corporate mobile workforce.

HMS Data Usage allow company to download the report of their employee internet data usage history.

HMS BYOD
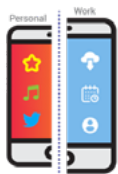

BYOD Containerization
HMS with its BYOD module helps enterprises automatically install and separate the corporate mobile applications from their personal devices. Using a separate work container & secure network enable companies to minimize the risks of data leakage.

Corporate Playstore
Ensure all corporate applications can only be accessed and downloaded by your employees privately with a Corporate Playstore in their workspace area. This feature is becoming one of the most secure ways for enterprises to deploy corporate mobile applications to their employees.

ABOUT

Kouvénta is an AI-integrated omni-channel business communication platform that enables your company to improve the customer experience by enabling you to seamlessly engage, interact, and transact with your customers. We strive to be flexible and provide the best solutions by understanding our clients' needs.

PRODUCT OVERVIEW

1. OTP
Ensure your customer with safe app login and transaction by using One Time Password (OTP)
via WA, email or text messaging

2. Marketing Campaign
Marketing campaigns are interactive communication to increase awareness, promote, and get customer feedback regarding your products. Marketing campaigns can be used to reach your customers in a variety of creative ways and involve multiple media.

3. AI Bot
Kouvénta harnesses the power of AI from Azure by integrating with Azure OpenAI Service, enabling us to offer an advanced chatbot solution that delivers humanlike experiences using ChatGPT

4. 1Click Contact Center (One3C)
- Enable your customers easily reach you through One3C anytime anywhere with just one click only.
- Provides omnichannel communication via free chat, call, and WhatsApp

5. Interactive Catalogue
Provides the capabilities to list your product items and enable your customers to transact in WhatsApp platform

Why choose Kouvénta?

1. Self Hosted Database
Your company has full access control and management over your customers data by deploying the solutions on your own premise

2. AI-Powered Chatbot Solutions
By integrating with Azure OpenAI Service, Kouvénta harnesses the power of AI from Azure, enabling them to offer an advanced chatbot solution that delivers humanlike experiences

3. Integration Capabilities
Kouvénta integration capabilities establish seamless connections with existing systems like CRM software, customer support platforms, and e-commerce platforms, ensuring a streamlined experience.

Product Issuer	: Microsoft
Issuer's Business Type	: Cloud & PaaS
Headquarter	: USA
Product Website	: www.microsoft.com
Target Market	: Cross Industry
Solutions	: Azure Cloud & Office 365
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Microsoft (Nasdaq "MSFT" @microsoft) enables digital transformation for the era of an intelligent cloud and an intelligent edge. Its mission is to empower every person and every organization on the planet to achieve more.

PRODUCT OVERVIEW

Microsoft 365

Microsoft 365 is designed to help you achieve more with innovative Office apps, intelligent cloud services, and world-class security. Get work done with productivity solutions and stay connected with your employees and clients whether you're working remotely or onsite.

Collaboration Tools
Host online meetings, make calls, chat, share files, and collaborate in real time with Microsoft Teams.

Office apps and services
Microsoft 365 has the tools you need to work anytime, anywhere, on any device. It has the same Office apps you've used for years, plus all the benefits of the cloud.

Business Email & Calendaring
Microsoft business email and calendaring products help you stay on top of what matters with a clear, unified view of your email, calendar, and contacts.

Online File Storage & Sharing
Microsoft file storage and sharing products are designed to help you store, access, co-author, and update files from anywhere, and easily share files inside and outside your organization. Manage your files from anywhere with 1 TB of OneDrive storage.

Security
Businesses are experiencing an increase in both the volume and sophistication of cyberattacks. With rapid technology adoption and increased hybrid work, the risk is greater for small and medium-sized customers contending with budget constraints and gaps in specialized security skills.
Microsoft offers comprehensive solutions to address this evolving threat landscape.

Microsoft Perpetual License

Microsoft Perpetual License is now available on Cloud Solution Provider program (CSP). Cloud Solution Provider program will support customers and partners with a streamlined buying experience. Empowers customers' transition to the cloud and gives partners the flexibility needed for customer hybrid cloud environments. Helios as Cloud Solution Provider will be able to sell commercial perpetual software licenses for on-premises deployment in the program. Microsoft Perpetual License will help you to reduce the time and costs associated with managing multiple licensing programs that lead to improved sales and operational, and management capabilities.

Microsoft CSP Perpetual License will help your business needs by:
• Simplified purchasing experience
• Accelerated Delivery Cycle
• One-stop destination for hybrid purchasing needs
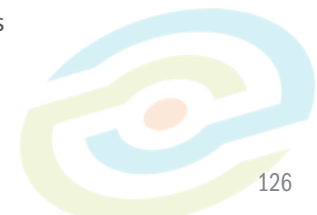

Azure Cloud Services

Azure Cloud Services gives you a staging environment for testing a new release, without affecting the existing release, which reduces the chances of customer downtime. When you're ready to deploy the new release to production, just swap the staging environment into production. Azure and its free Autoscale feature can help you during unexpected traffic spikes, by automatically scaling up or down to meet demand, while simultaneously minimizing costs. Azure helps you monitor the health and availability of your applications. The health metrics dashboard shows you key statistics at a glance. Set up real-time alerts to warn you when service availability or other metrics degrade.

Solve your business problems with proven combinations of Azure products and services in these areas:
- Hybrid cloud and infrastructure
- Business continuity and Disaster recovery (BCDR)
- Cloud migration and modernization
- Application Development
- Data and analytics
- Artificial intelligent (AI) and Machine Learning
- Security and governance
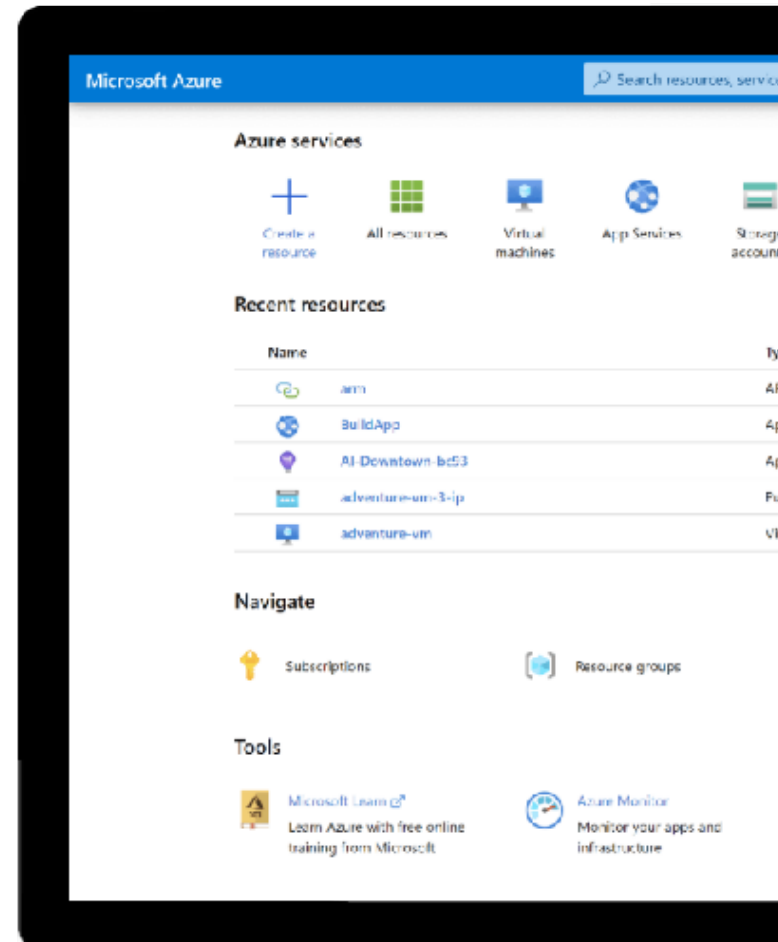

NUTANIX

Product Issuer	: Nutanix, Inc
Issuer's Business Type	: Distributed Computing and Storage Virtualization
Headquarter	: San Jose, California, United States
Product Website	: www.nutanix.com
Target Market	: Cross Industry
Solutions	: Enterprise Cloud Platform, Business Software, IoT
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Nutanix, Inc. is an American multinational cloud computing company founded at 2009 that sells hyper-converged infrastructure (HCI) software, cloud services (such as Desktops as a service, Disaster Recovery as a service, and cloud monitoring), and software-defined storage.

PRODUCT OVERVIEW

Hyperconverged Infrastructure

AOS Distributed Storage
Scalable, resilient, high-performance storage for all of your applications

AHV Virtualization
License-free virtualization for enterprise.

Karbon Kubernetes orchestration
Kubernetes management made simple.

Prism for Infra & IT Ops
Manage your global Nutanix HCI infrastructure from one console. Optimize virtualization and infrastructure management with predictive analytics and task automation.

DevOps & IT Operation

Calm Application Management
App-level orchestration across teams and clouds. Calm enables you to streamline how you manage applications and support the business while IT demands rising faster than ever

Era Database Management
Simplified database operations, Era enables database management on your terms. By providing simple, fast, consistent management from a single control plane, Era dramatically improves uptime, reduces tedious manual operations, and increases cost efficiency.

Security

Flow Microsegmentation
Protect your data and apps from cyber threats. Nutanix AHV with Flow delivers advanced networking, application-centric visibility and enterprise-grade microsegmentation for protection from network threats.

Storage & Data Services

Files Storage
Nutanix Files is a simple, flexible and intelligent scale-out file storage service for the data driven era.

Objects Storage
Simple, secure, scale-out object storage to your hybrid cloud to massive scale object storage with ease.

Volumes Block Storage
Nutanix Volumes bridges the physical and virtual, consolidating infrastructure into a single unified platform.

Business Continuity

Xi Leap
Protect apps, data & services from downtime. Achieve SLAs with a cloud-based disaster recovery service built for Nutanix HCI.

Mine
Modern data protection for today's business environment. Consolidate backup operations onto one turnkey solution that keeps up with rapid growth.

Cloud Services

Xi Beam
Xi Beam delivers savings for public and private clouds. Drive financial accountability with intelligent resource sizing and accurate visibility into cloud metering and chargeback.

IoT Edge Computing
Nutanix Karbon Platform Services for IoT delivers local compute and AI-driven processing to edge devices, converging the edge and cloud for real-time business insight.

End User Services

Xi Frame
Run any software in a browser. Deliver virtual apps and desktops to users worldwide. Either in the cloud with AWS, Microsoft Azure or Google Cloud Platform. Or on-premises with Nutanix AHV.

SAMSUNG

Product Issuer : Samsung
Issuer's Business Type : Enterprise Devices
Headquarter : South Korea
Product Website : www.samsung.com / www.samsungknox.com
Target Market : Cross Industry
Solutions : End Point & Enterprise Mobility Security Solution
Service Scale : SME, Enterprise & Multinational Company

ABOUT

Samsung is a South Korea multinational technology company that headquartered in Samsung town, Seoul. It provides electronic devices and management software to consumers, small and medium sized businesses (SMBs) and large enterprises. The Company's hardware products include Samsung electronic for home appliance, Mobile device, and mobile management software.
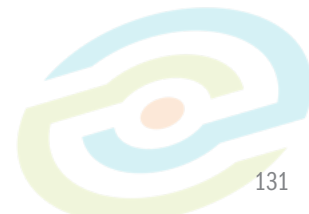

PRODUCT OVERVIEW

Enterprise Mobility Security Solution

Knox Configure

Remotely configure Samsung phones and tablets in bulk and tailor them to specific needs. Create custom devices with unique profiles, settings, restrictions, apps, and other content. Enrolled devices will automatically receive them via WiFi and mobile data.

Knox E-Fota

Knox Enterprise Firmware-Over-The-Air is a business solution that allows you to manage firmware versions on Samsung mobile devices to maximize cost efficiency. Ensure latest security patches are deployed to devices on schedule. IT admins can test updates before deployment, ensuring compatibility between in-house apps and new OS versions.

Knox Manage

Manage a fleet of devices with a cloud-based EMM solution that increases business efficiency and secures corporate data. Knox Manage can manage any Android, iOS or Windows 10 device, but is most secure on Samsung Galaxy devices integrated with the Knox platform.

Knox Mobile

Add thousands of Samsung devices to your enterprise at once, without having to manually enroll each one. Your users just power on their devices and connect to the network to enroll to your enterprise mobility management (MDM/EMM) provider.

Knox Platform for Enterprise

The Knox Platform for Enterprise solution provides a robust set of features on top of the core Android Enterprise platform, to fill security and management gaps and meet the strict requirements of highly regulated industries.

The additional features in KPE have been designed to address more sophisticated security needs for confidential data, providing powerful features for Android for stringent requirements in highly regulated industries.

Knox Guard

Remotely control Samsung devices to reduce financial risks and protect assets. Guard your device enterprise assets or payment plans with ease. Enable protection schemes against theft, loss, or financial default for all devices straight out of the box. Highly secure lock. Granular Restrictions. Streamlined user experience.

Knox Capture

Transform Samsung phones into enterprise-grade scanners and integrate captured barcode data into your business apps. Use your phones for work and turn them into powerful barcode scanners, liberating your field force with enhanced mobility and productivity. All while saving on total cost of operations with easy, customizable scanning UX that can be deployed in bulk.

Product Issuer	: Sangfor Technologies
Issuer's Business Type	: Enterprise Cloud & Network Security Solutions
Headquarter	: China
Product Website	: www.sangfor.com
Target Market	: Cross Industry
Solutions	: Hardware and Software
Service Scale	: SME, Enterprise

ABOUT

Sangfor Technologies is a leading global vendor of IT infrastructure solutions, specializing in Network Security & Cloud Computing with a wide range of products & services including Next Generation Firewall, Endpoint Protection, Managed Detection and Response, Internet Access Management, Hyper-Converged Infrastructure, Virtual Desktop Infrastructure, WAN Optimization, SD-WAN and many others.

PRODUCT OVERVIEW

Network Security Solution

IAM (Internet Access Management)

IAM is a superior Internet behaviour management solution consisting of professional internet bandwidth management, application control, URL filters, traffic control, information control, illegal hotspot/proxy control, behaviour analysis, wireless network management and many more features.

This solution can truly help you achieve effective Web Filtering and unified internet behaviour management of all clients in the entire network.

NGAF (Next Generation Application Firewall)

Sangfor NGAF is the world's first AI enabled and fully integrated NGFW (Next Generation Firewall) + WAF (Web Application Firewall) with an all-around protection from all threats powered by innovations such as Neural-X and Engine Zero. It is a truly secured, integrated and simplified firewall solution, providing holistic overview of the entire organization security network, with ease of management for administration, operation & maintenance.

Endpoint Secure

Endpoint Secure is constructed through cloud linkage and coordination that can provides the endpoint with a more detailed isolation policy, enabling more accurate search and destroy capabilities, sustainable detection capabilities and faster processing capabilities including prevention, defense, detection and response. Threat information sharing, multi-level response mechanisms and advanced threat response

Microsoft Perpetual License

Microsoft Perpetual License is now available on Cloud Solution Provider program (CSP). Cloud Solution Provider program will support customers and partners with a streamlined buying experience. Empowers customers' transition to the cloud and gives partners the flexibility needed for customer hybrid cloud environments. Helios as Cloud Solution Provider will be able to sell commercial perpetual software licenses for on-premises deployment in the program. Microsoft Perpetual License will help you to reduce the time and costs associated with managing multiple licensing programs that lead to improved sales and operational, and management capabilities.

Microsoft CSP Perpetual License will help your business needs by:
o Simplified purchasing experience
o Accelerated Delivery Cycle
o One-stop destination for hybrid purchasing needs

Network Optimization

SD WAN

With increasing internet bandwidth capacity and availability across country, we don't want to miss the opportunity to expand our business opportunity. But when it comes to new opportunity, there will be a great challenge waiting ahead. User experience, security and productivity while maintaining link availability at all time will become necessary. Sangfor SDWAN gives a flexible solution to answer your needs to build your unlimited network. With Sangfor SDWAN flexibility across platform, like firewall, internet access management or WAN optimization, you can choose what most suitable for your network.

Infrastructure Virtualization

Hyperconverged Infrastructure

It's time to turn your Infrastructure to Private Cloud from your existing server or build new powerful Hyperconverged Server with ease. SANGFOR 3rd Generation HCI is unique compared to other HCI vendors, you can Virtualize your Computing, Storage, Networking and Security into one single management console. No more 3rd Party software to run your business system High Availability, Easy to scale Cluster, Scheduled Backup and Replication all in one Solution.

VDI aDesk

This is the latest virtual desktop cloud solution based on hyper-converged infrastructure. Through deeply integrated server virtualization, desktop virtualization and storage virtualization, it only takes an aDesk thin client appliance and a cloud terminal to deliver rapid deployment of cloud platform.
This desktop virtualization solution assures an outstanding user experience, and software/hardware/peripheral comparable to PC.
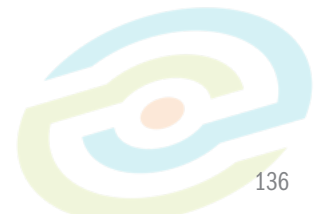

Product Issuer	: Tencent Cloud
Issuer's Business Type	: Cloud Computing
Headquarter	: Shenzhen Shi, China
Product Website	: https://intl.cloud.tencent.com/
Target Market	: Cross Industry
Solutions	: Compute and Container, Storage, Database, Networking and CDN, Microservice and Serverless, Security
Service Scale	: SMB, SMC, & Enterprise

ABOUT

Tencent Cloud provides 70+ product capabilities including computing, database, and networking, satisfying all your business needs. Operating 70 availability zones spread across 26 regions globally, Tencent has strong infrastructure to support your business expansion.

PRODUCT OVERVIEW

Compute and Container

Cloud Virtual Machine
Cloud Virtual Machine (CVM) provides you with secure and flexible computing capabilities. You can enable CVM in the cloud in just minutes to meet your diverse computing needs. Through CVM, you can easily scale up or down your computing resources as your business needs change. Billed based on your actual resource consumption, CVM reduces your computing costs and simplifies IT-related OPS.

Tencent Kubernetes Engine
Tencent Kubernetes Engine (TKE) is a container management service with high scalability and performance that enables you to easily run applications in a managed CVM instance cluster. This service frees you from installation, operations, and expansion of the cluster management infrastructure

Tencent Cloud Storage

Cloud Object Storage
Cloud Object Storage (COS) is a powerful Tencent Cloud distributed storage service that features low costs and high scalability, reliability, and security. It enables you to store a massive number of files and view them on the cloud anytime.

Cloud File Storage
Cloud File Storage (CFS) provides a scalable shared file storage service that can be used with Tencent Cloud services such as CVM, TKE, and BatchCompute. CFS offers standard NFS and CIFS/SMB file system access protocols as well as shared data sources for multiple CVM instances or other computing services.

Cloud Block Storage
Cloud Block Storage (CBS) is a highly available, highly reliable, low-cost, and customizable block storage device. It can be used as an independent and scalable disk for CVM, providing efficient and reliable storage devices. CBS provides long-term storage at the data block level

Tencent Cloud Databases

TencentDB for SQL Server
Licensed by Microsoft, TencentDB for SQL Server continuously provides you with the latest features and helps you avoid the risks with unauthorized use of the software. It features out-of-the-box usage, high stability, reliability, and security, data security protection, and failover in a matter of seconds, enabling you to focus more on application development itself.

TencentDB for mySQL
TencentDB for MySQL is a high-performance distributed data storage service developed by Tencent Cloud based on the open-source MySQL database. It enables you to set up, manipulate, and scale relational databases in the cloud more easily.
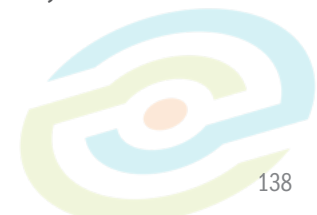

TencentDB for MariaDB

TencentDB for MariaDB is a highly secure enterprise-level cloud database dedicated to the online transaction processing (OLTP) scenario. It is compatible with MySQL syntax and has various advanced features such as thread pool, audit, and remote disaster recovery while delivering easy scalability, simplicity, and high cost performance of TencentDB.

TencentDB for PostgreSQL

TencentDB for PostgreSQL allows you to easily configure, work with and expand the PostgreSQL, one of the most powerful open-source databases, on the cloud.

SPECIALTY & UNIQUENESS

• Strong global infrastructure across 26 regions (Including Indonesia)
• One stop solution for various industries and scenarios
• Tencent cloud security compliance with various industry standards

UiPath™

Product Issuer	: UiPath Inc.
Issuer's Business Type	: Software
Headquarter	: One Vanderbilt, New York, US
Product Website	: www.uipath.com
Target Market	: Cross Industry
Solutions	: Robot Process Automation (RPA), API Integration
Service Scale	: SME, Enterprise, & Multinational Company

ABOUT

UiPath has been a leader in every Gartner Magic Quadrant, Forrester Wave, and Everest Peak Matrix for RPA. #1 in all Major Independent User Review sites for RPA including Gartner Peer Insights, GSCrowd, TrustRadius, Capterra, and ITCentralStation.

The company's software monitors user activity to automate repetitive front and back office tasks, including those performed using other business software.

PRODUCT OVERVIEW

Discover

Find automation opportunities powered by AI and your people. Crowd-source, build, and manage a high-ROI pipeline in one place.

- Automation Hub
- Task Capture
- Process Mining
- Task Mining

Build

Get rich, low-code build environments for simple to advanced automations. Automate more processes with API integrations and AI-rich tools and templates. And bring in great pre-built components with a few simple clicks

- Studio
- StudioX
- Document Understanding
- Automation Ops
- Integration Service
- Marketplace

Manage

Run your automation operations with integrated, enterprise-strength capabilities to manage, govern, maintain security, and measure. Manage and scale AI with ease. Test your robots and apps quickly and consistently. And get the data flows you need with no-code data modeling and storage.

- Orchestrator
- AI Center
- Test Manager
- Data Service
- Insights

Run

Access ready-to-go SaaS robots in UiPath Automation Cloud™ with a browser. Get robots that are equipped to work alongside their people on everyday tasks. Or choose robots that perform unattended processes tirelessly and accurately behind the scenes.

- Robots
- Attended Robots
- Automation Cloud Robots

Engage

Tap into the power of people and robots, working together. Give a digital assistant to everybody for everyday tasks. Quickly build apps that make using automations easier and more intuitive than ever.

- Apps
- Assistant
- Action Center

Specialty & Uniqueness:

The company's software monitors user activity to automate repetitive front and back office tasks, including those performed using other business (3rd party) software. UiPath software has the enterprise-proven scalability, governance, and security.

- Automate end-to-end with the UiPath Platform
- Best in class UI, API, and AI automation
- AI built in across the platform
- Proven ability to scale
- Robust governance and security
- Cloud-native, flexible delivery
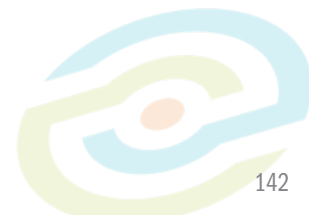

About
Jedi Global Teknologi (Jedi Solutions)

Founded in 2018 and now as part of CTI Group, Jedi Solutions is a Managed Service Provider (MSP) in Indonesia and have own Data Center to support our Customer business needs. Jedi provide a single point of responsibility for project management, detailed service design, ordering, provisioning, activation and maintenance of infrastructure and operational services. With Jedi's extensive partnership with technology vendors, they provide smooth delivery of services in many places, including 24/7 Network Operations Center (NOC) & proactive service management, helping to ensure that Our Customer's operational activities run well and avoid IT maintenance issues.

IT Operation as a Service

IT infrastructure environments need to adapt to a growing number of mission-critical applications, increasing service levels and fast-changing business requirements. Jedi IT Operations as a Service (JITOS) is designed to enhance and extend the capabilities of your IT team. Rather than spending the majority of their time on day-to-day operational challenges, your team can focus on providing business value. JITOS connects to the technologies you already have, which means no more struggling to manage multiple, disparate toolsets.

A service delivery model based on standardized, repeatable and scalable response to your operational challenges forms the foundation of JITOS. Jedi leverages industry best practices and deep technical in-house knowledge to help you dramatically reduce IT outages, improve time to resolution and maximize the value of your IT investments.

There is no denying that as your business grows, it becomes more challenging to manage and monitor your ever-expanding IT infrastructure, ranging from servers and storage to virtual machines and the cloud. Activities such as updating security patches, doing backups, and continuous monitoring will eventually be burdensome and impossible. Moreover, how to ensure we are catching up with the latest technology and standards. That is why IT Operations as a Service from Jedi is ideal.

Certifications:
• ISO 20000-1: 2018 IT Service Management
• ISO 27001:2013 Information Security Management System
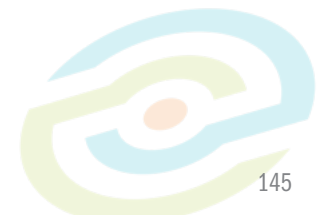

IT Audit & Consulting

Our Audit and IT Consulting Services solutions will help protect your organization's information systems, maintain compliance with regulatory requirements, and provide insights on how to utilize IT management to cut costs and gain a competitive edge.

By collaborating with Jedi Solutions, your organization will get guidance from IT assurance professionals with decades of IT consulting and audit experience across a broad range of industries. Our guidance is complemented by professional accreditations.

IT Audit Services:

- Providing IT Risk Management audit services for Banks in accordance with POJK.
- Provide compliance audit services according to POJK for Payment Service Providers.
- Providing IT Assessment services in accordance with ISO 27001 and PCI-DSS.

Consulting Service:

- Assisting consultant in obtaining ISO 27001, ISO 20000 and PCI-DSS certifications.
- Consultancy for creating Business Continuity Plan or Disaster Recovery Plan documents.
- Consultancy for creating Information Technology Audit Guidelines documents in accordance with POJK covering General Control and Application Control.

Product Issuer	: Jedi Global Teknologi
Issuer's Business Type	: Managed Services
Headquarter	: Jakarta, Indonesia
Product Website	: ocula.co.id
Target Market	: All Industries
Solutions	: Monitoring Dashboard
Services Scale	: Enterprise

ABOUT

Ocula is a network monitoring product developed and internally used by PT Jedi Global Teknologi (Jedi) since 2019. It serves as an advanced solution for monitoring the performance of your business network.

The Ocula system provides real-time monitoring capabilities and large-scale data monitoring, along with network performance analysis. It offers advanced reports & alerts, including email, Telegram, and Microsoft Teams notifications, to provide a comprehensive overview of your network performance.
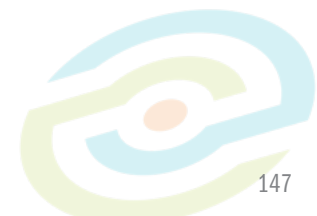

PRODUCT OVERVIEW

NMS (Network Monitoring System)

Ocula Network Monitoring Dashboard is a state-of-the-art product designed to optimize network performance and ensure the reliability of business networks. With its robust features and intuitive interface, Ocula empowers IT teams to proactively monitor, analyze, and troubleshoot network issues with ease.

The Ocula Network Monitoring Dashboard provides a comprehensive view of network health, allowing users to monitor key metrics such as bandwidth utilization,   latency, packet loss, and device status in real time. With customizable widgets and dynamic charts, IT professionals can easily visualize network data trends, identify bottlenecks, and take corrective actions promptly.

Ocula Features

- Network performance analysis and monitoring
- Monitoring the system status on the server
- Monitoring domains
- Monitoring expired SSL
- Keeping track of access points
- Notification of any issues with the network device or server

Product description, specialty, & uniqeness

Application Performance Monitoring (APM)
Monitors real-time application performance, tracking response time, throughput, and error rates. APM identifies performance bottlenecks and issues that can impact the user experience.

Infrastructure Monitoring
Focus on monitoring the infrastructure that supports applications-including servers, databases, and cloud services-to identify resource utilization, capacity issues, and overall system health.

Syntethic Monitoring
Provides mock monitoring tools that simulate the user experience with applications to help organizations proactively identify performance and downtime issues before users are affected.

Browser and Mobile Application Monitoring
Enables user experience monitoring across web browsers and mobile devices to help organizations understand application performance across platforms and devices.

Dashboard and Reporting
Provide customizable capabilities for visualizing and analyzing data related to application and infrastructure performance.

Alerting and Notification
Provide alerts and notifications triggered by pre-defined thresholds or anomalies, enabling teams to quickly resolve emerging problems.

Digital Experience Monitoring
Prioritizes end-user experience tracking, enabling organizations to see how users really interact with their applications and identify areas for improvement.

Logs and Error Tracking
Enable users to collect, analyze, and track application logs, errors, and exceptions to support troubleshooting and identification of areas for improvement.

AI and Machine Learning
Leverage Artificial Intelligence and Machine Learning to deliver insights and recommendations to optimize application and infrastructure performance.

Cloud and Container Monitoring
Ensure the highest levels of performance and reliability by monitoring applications and services in cloud and container environments.

PT. MEGA BUANA TEKNOLOGI

About MBT

Mega Buana Teknologi (MBT) is a new entity under Computrade Technology International (CTI Group) as one of the largest IT solution distributors in South East Asia. MBT was built to cover the rapid growth of technology evolution and to focus on Indonesia's business development. We offer an efficient, flexible, cost-effective, and scalable solutions for cross industries and make it easy to shift database workloads to the cloud.

Product Issuer	: Inspire-Tech Pte Ltd
Issuer's Business Type	: Enterprise File Synchronization and Sharing
Headquarter	: Singapore
Product Website	: www.easishare.com
Target Market	: Cross Industry
Solutions	: Integrated File Sharing Security
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

EasiShare is an Enterprise File Security Solution on a single platform to manage, share and govern files anywhere and anytime which being used in government agencies and large multinational enterprises today. EasiShare offers simple user interface to keep user experience richly consistent and productive without compromising on security on your organization's own data center. Deployment options can either be on-premise or private cloud.

Government & enterprise customers can count on EasiShare to access and share documents securely and conveniently. EasiShare does not keep any copies of the file exchanged between the client application and the storages. Coupled with a centralized audit log facility, this gives administrator peace of mind as they know exactly where the files are. Administrators can also centrally managed policies of both users and devices in the Central Admin portal provided.

PRODUCT OVERVIEW

Secure File Transfer

EasiShare securely enables external files transfer, replacing the traditional infrastructure of emails or secure-FTPs. An employee can send out classified information in files/folders to external users. The file sharing may have an expiration date, OTP and/or file level protect imposed; all actions are logged in the system's audit records.

Complete Audit & Visibility

- Get notified on who have download/upload files.
- Audit history of all downloads and uploads.

Outlook & Mobile Integration

- Select files directly from mobile for secure file sharing.
- Adjust the level of security when sending each email with attachment using similar Outlook user experience.

Military-Grade Security

- Uses AES 256bit encryption.
- AirGap architecture for data protection.
- Authenticates the server to the user for secure file sharing & request.
- One-time PIN protected access for guest users.
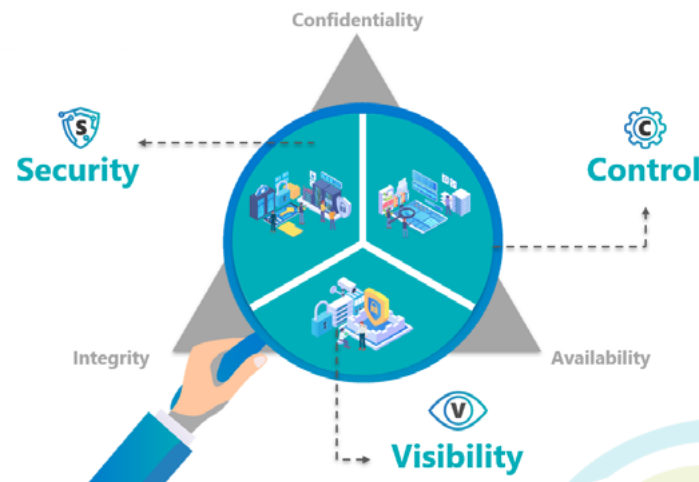

Secure Collaboration

Accessing and collaboration of files among co-workers needs to be secured. SMB vulnerabilities result in seeking alternatives. Empowers department heads to give permission to shared folders. One-click editing with auto locking of files.

No SMB connection
- Choice of connection like HTTPS, WebDav, Local Drive instead of SMB.
- Ideal replacement of protocol without files migration

Easy File Management & User Interface
- Similar Windows Explorer interface for managing files/folder and permission.
- Auto launch MS Office and PDF editors when clicking on the respective files.

Better Collaboration
- One-click edit with auto locking of files with indicators.
- File versioning, Check-In / Check-Out indicators
- Self-manage folder permissions to collaborate

Better Security and Controls
- Military grade encryption on storage available
- Configurable desktop app.

Paperless Boardroom

Often critical documents shared by organisations eg. Executive Papers and Council Papers are distributed using un-auditable or risky technologies. Facilitates easy meeting setup with user-friendly features while enhancing security.

Immediate Delivery
- Reports are distributed in a matter of seconds and will always be received.

Complete Visibility
- Always know what information has been delivered to who.

Easy, Secure Access
- Participants can access the documents from any devices, any time.
- Access is restricted to authenticated groups only.
- Multi-profile support for BODs that are on many organizations.

Better Meeting Participation
- Annotate on documents and read in full interactive mode.
- Audio and video can be part of the disseminated information.
- Create new notes and save to personal or corporate folders.

Smart Sync & Backup

Requires easy backup & recovery of files during PC damage or loss. EasiShare provides real-time synchronization of user's files and backup to organization's storage without external hard disks.

Un-intrusive backup
- Staff working on PC drives get files backed up through real time synchronization.
- Any updates and changes made to the files gets updated to the server promptly.

Selective Sync
- Mobile & Off-site employees can select files/folders from shared drives to sync and use when offline.
- Files get auto-sync when reconnect.
- Conflict management prompt if EasiShare detects concurrent changes.

Recover from Damage/Loss
- Recover easily from PC crashes or notebook loss by syncing down the backed-up files.

Service Scale	: SME, Enterprise, & Multinational Company

ABOUT

Huawei Cloud opens up Huawei's over three decades of expertise in ICT and digitalization. We work with our customers, partners, and developers to dive into digital and provide Everything as a Service, together building the cloud foundation for an intelligent world.
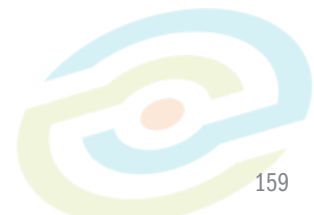

HUAWEI CLOUD SERVICES
Everything as a Service Building the Cloud Foundation for an Intelligent World

The future is all about intelligence, and digitalization is the path for enterprises to get there. The key to successful digitalization is to think cloud native, act cloud native. Here at Huawei Cloud, our approach is all digital, all cloud, AI-driven, and providing everything as a service. Huawei Cloud works with customers, partners, and developers, always innovating and bringing reality to our vision of building the cloud foundation for an intelligent world with ubiquitous cloud and pervasive intelligence.

Solve your business problems with proven combinations of Huawei products and services in these areas:

COMPUTE

Elastic Cloud Services (ECS)
General Computing-plus C6 ECS
Latest-generation Intel® Xeon® Scalable processors enable powerful and reliable computing, and Huawei 25GE high-speed intelligent NICs provide ultra-high network bandwidth and PPS.

Applications
- Websites and web applications with high requirements on computing and network performance
- Generalized databases and cache servers
- Medium- and heavy-load enterprise applications

STORAGE

Elastic Volume Service
Elastic Volume Service (EVS) provides highly durable block storage for cloud servers such as Elastic Cloud Servers (ECS) and Bare Metal Servers (BMS). EVS offers 99.9999999% durability and as little as 1 millisecond of read/write latency for a broad range of mission-critical applications.

CONTAINER

Cloud Container Engine (CCE)
Cloud Container Engine is a fully managed Kubernetes service for you to deploy, manage, and scale containerized applications. CCE supports Kubernetes ecosystem and tooling, allowing you to easily set up a container runtime environment in the cloud.

ANALYTICS

Data Lake Insight (DLI)
Data Lake Insight (DLI) is a serverless data processing and analysis service fully compatible with Apache Spark, Flink, and openLooKeng (Presto-based) ecosystems. You can effortlessly perform stream, batch, and interactive analysis to query mainstream data formats without data ETL. You can also use standard SQL, and Spark and Flink applications for convergent data analysis.

INTERNET OF THINGS

IoT Device Management
Easily connect any number of IoT devices to the cloud, manage them in a visualized manner, integrate and analyze data, and invoke open capabilities for service innovation.

DATABASES

RDS for PostgreSQL
Launch and scale RDS for PostgreSQL in minutes on the cloud - a fully managed database service powered by Postgres, a leading open-source relational database system with a focus on extensibility and SQL compliance.

Security & Compliances

Web Application Firewall (WAF)
Web Application Firewall acts as a shield for web apps and websites against multiple attacks such as SQL injection, malicious file execution, cross-site scripting, and more. Powered by Huawei's machine learning technology, WAF intelligently filters out malicious traffic to safeguard data, ensure fast load times, and maintain uptime.

NETWORKING

Virtual Private Cloud
Virtual Private Cloud (VPC) enables you to create a secure, private, and isolated virtual network. You can customize IP address ranges, subnets, security groups, and bandwidths, and assign Elastic IP (EIP) addresses.

MANAGEMENT & GOVERNANCE

Application Performance Management
Application Performance Management (APM) monitors and manages the performance of cloud applications in real time. APM provides performance analysis of distributed applications, helping O&M personnel quickly locate and resolve faults and performance bottlenecks
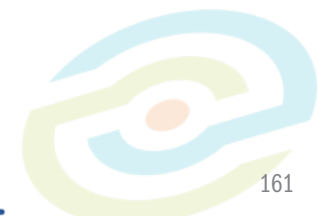

NetApp

Product Issuer	: NetApp, Inc.
Issuer's Business Type	: Data Management & Hybrid Cloud Services Company
Headquarter	: Sunnyvale, California, United States
Product Website	: www.netapp.com
Target Market	: Cross Industry
Solutions	: HCI, Cloud Data Management
Service Scale	: SME, Resource Industry, FSI

ABOUT

NetApp is the global leader in data management and hybrid cloud data services. Founded in 1992 as Network Appliance, NetApp has worked with customers across different industries in ensuring business critical data and applications are always in the right place at the right time. With more than 25-years of experience NetApp in data storage and management industry, NetApp helps customers from building data centers to building data fabrics, simplifying operations and innovating data integration across on-premises data centers, edge, and public cloud.

PRODUCT OVERVIEW

Data Storage System

Accelerate workloads, simplify operations, and achieve data center efficiencies with NetApp wide portfolio of All-Flash, Hybrid and Object storage systems.

NetApp AFF

Modernize and simplify your storage. AFF A-Series all-flash arrays combine industry-leading performance, efficiency, and data management with seamless cloud connectivity.

NetApp FAS

Simple, smart, trusted storage for shared NAS and SAN environments that require rich data management and easy cloud integration.

NetApp EF-Series

EF-Series all-flash arrays deliver fast, consistent response times to accelerate databases, high-performance computing and analytics workloads.

NetApp E-Series

Built for dedicated, high-bandwidth applications like data analytics, video surveillance, and disk-based backup that need simple, fast, reliable SAN storage.

StorageGRID Object Storage

StorageGRID provides greater data management intelligence on a simplified platform for your object data. Because StorageGRID leverages S3, it painlessly bridges hybrid cloud workflows and enables your data to be fluid to meet your business demands.

Cloud Services

Transform your business with speed, scale and the agility of public cloud with NetApp Cloud Volumes ONTAP and various cloud service offerings. NetApp provides you the capability to seamlessly integrate and move workloads across AWS, Azure and Google Cloud.

Cloud Volumes ONTAP (CVO)

Cloud Volumes ONTAP enables you to optimize your cloud storage costs and performance while enhancing data protection, security and compliance.

Cloud Volumes Services

Fully managed, cloud service that enables you to move your mission-critical workloads and applications to the cloud, and manage them with ease.

SaaS Backup

Guard your Office 365 and Salesforce data with secure backup and restore.

Azure NetApp Files

A Microsoft Azure native, high performance file storage service for your core business applications.

Hybrid Cloud Infrastructures

NetApp HCI allows your business to operate with public cloud agility on-premises, with predictable performance and flexible scaling to simplify data center growth planning.

NetApp HCI

NetApp HCI is a scalable, on-premises hyperconverged infrastructure for hybrid clouds. Build your private cloud into a deployable region of your multicloud – bring your public cloud on-premises and develop anywhere, on any cloud, with one experience.

Product Issuer	:Oracle
Issuer's Business Type	: IT Infrastructure

Product Website	: www.oracle.com
Target Market	: Cross Industry
Solutions	: Hardware, Cloud, Software & Security
Service Scale	: SME, Resource Industry, FSI

ABOUT

Oracle has come a long way from a small database management company to a power player in server and cloud industry. Oracle took at milestones in its History, and keep digging for new future innovation.

PRODUCT OVERVIEW

Oracle Database

Some people said "Data Is the New Oil", Data in the 21st Century is like Oil in the 18th Century: an immensely, untapped valuable asset. Like oil, for those who consume Data's fundamental value and have the right technology which capable to extract and process it, there will be huge benefits. Oracle has methodologies and principles to achieve high performance and best data security which capable to process this new oil to become something more valuable than every data in the world.

Oracle Database 19c Series

Oracle Fusion Middleware

Middleware enables the flow of real-time information access within and among systems in a network. In business, it helps streamline processes and improves efficiency in terms of organization. Since it facilitates communication between systems, it is able to maintain the integrity of information across a multitude of systems within a network. Oracle middleware has the highest performance and widest compatibility compared to its competitors

Oracle GoldenGate
WebLogic Server
**SOA Suite**

MySQL

Oracle brings MySQL to be the World's # 1 Open Source Database in the Oracle Cloud, and also makes MySQL the most affordable high-performance database on its class. Make it easier for MySQL open source customers who needs to move on to supported, highly available, and secure Database.

MySQL Enterprise Edition
MySQL Carrier Grade Edition

Oracle Cloud

Oracle will provide You with a Cloud Services Account which allows You to set up and use eligible Oracle Cloud Services for the applicable Cloud Services categories in accordance with the type of Credit Period You have selected. Oracle cloud can reduce overhead and operational costs, investments in hardware and associated maintenance, and run large workloads at scale without a jump in pricing. Available Services:

Platform as a Service
Infrastructure as a Services
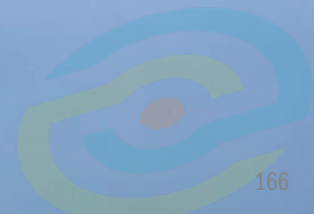

Oracle Linux

Oracle Linux is an open and complete operating environment that helps accelerate digital transformation. It delivers leading performance and security for hybrid and multi cloud deployments. Oracle Linux is 100% application binary compatible with Red Hat Enterprise Linux. And, with an Oracle Linux Support subscription, customers have access to award-winning Oracle support resources and Linux support specialists, zero-downtime patching with Ksplice, cloud native tools such as Kubernetes and Kata Containers, KVM virtualization and oVirt-based virtualization manager, DTrace, clustering tools, Spacewalk, Oracle Enterprise Manager, and lifetime support. All this and more is included in a single cost-effective support offering. Unlike many other commercial Linux distributions, Oracle Linux is easy to download and completely free to use, distribute, and update.

Oracle Hardware

Whether you're running your applications on a traditional IT infrastructure, looking to expand your server and storage footprint, or implementing cloud services, Oracle's Hardware can transform your business with advanced security, breakthrough integration and superior performance.

Oracle hardware includes a full-suite of scalable engineered systems, servers, and storage that enable enterprises to optimize application and database performance, protect crucial data, and lower costs. IT managers accelerate digital transformations with automated operations and exclusive features that improve database performance, lower software license costs, and simplify management.

Some of the Oracle hardware families are Oracle Exadata database machine, Oracle Engineered system, Server (Oracle's x86 and SPARC), and Oracle Storage

Oracle Exadata Database Machine
- Oracle Exadata Cloud Service
- Oracle Exadata Cloud@Customer
- Oracle Exadata Database Machine X8M

Oracle Engineered System
- Oracle Exadata Database Machine
- Oracle Database Appliance X8
- Oracle's Zero Data Loss Recovery Appliance X8M
- Oracle Private Cloud Appliance

Oracle Servers
- Oracle x86 servers
- Oracle SPARC M8-8
- Oracle SPARC T8 and S7 Servers
- Oracle Fujitsu SPARC servers
- Oracle NEBS-compliant server

Oracle Storage
- Oracle's Zero Data Loss Recovery Appliance X8M
- Oracle ZFS Storage Appliance
- Oracle StorageTek tape libraries
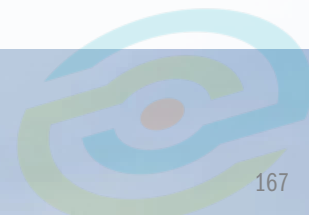

Product Issuer	: Stellar Cyber
Issuer's Business Type	: Software

Product Website	: stellarcyber.ai
Target Market	: Cross Industry
Solutions	: Security Operations Platform
Service Scale	: SME, Commercial, Enterprise

STELLAR CYBER®

ABOUT

The Stellar Cyber Open XDR platform delivers the capabilities commonly found in NG-SIEM, NDR, and SOAR products in a single platform with a single license - empowering lean security teams of all levels to effectively combat advanced cyber-attacks.

Threat intelligence (TIP) and advanced Machine Learning are integrated across all capabilities, providing a comprehensive threat detection and automated response platform that eliminates blind spots commonly found in other security products.

PRODUCT OVERVIEW

1. Next-Generation SIEM (NG-SIEM)

Stellar Cyber's NG-SIEM enables security teams to collect and normalize log data from any data source, automatically ensuring compliance audit readiness.

Once collected, it enhances search and threat detection capabilities by adding threat intelligence and additional contextual information. It also includes the ability to analyze the behavior of user entities to eliminate potential security threats that may have been missed by other security measures.

2. Network Detection and Response (NDR)

The Stellar Cyber NDR solution uses raw packet collection as well as NGFW logs, NetFlow, and IPFix from physical or virtual switch, container, server, and public cloud, enabling deep packet analysis of more than 4000 applications and L2-L7 metadata and files from network traffic.   Our solution includes IDS and malware sandbox, which safely detonates suspicious files to determine their intent.

3. Security Orchestration and Automated Response (SOAR)

Stellar Cyber SOAR enables security teams to effectively respond to cyber threats with pre-determined playbooks, guaranteeing consistent security results. With its countless pre-existing integrations into security, IT, and productivity products, users can establish nearly any necessary workflow to address identified cyber threats.

4. Open Extended Detection and Response (Open XDR)

Stellar Cyber Open XDR allows organizations to collect log and alert data from any security control, from the endpoint to the cloud and everything in between. The platform identifies, correlates, and responds to sophisticated cyber-attacks in real-time using advanced machine learning techniques and threat detection rules. Unlike closed XDR solutions that are simply extensions of a vendor's EDR product and limited to that vendor's specific EDR data, Stellar Cyber's ""bring your own EDR"" strategy allows organizations to use any EDR product in conjunction with Stellar Cyber.

Currently, Stellar Cyber supports all major EDR vendors.
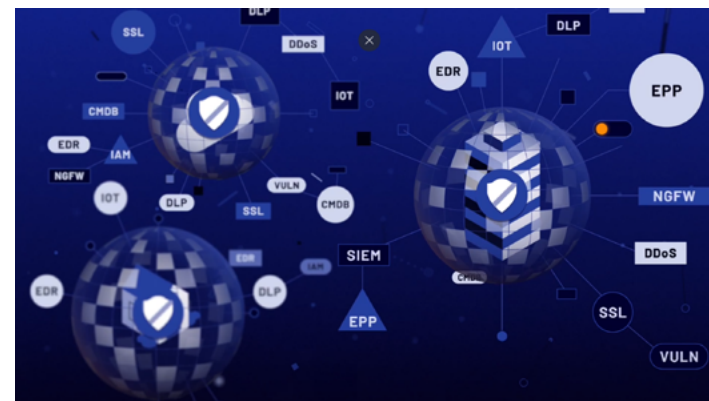

About Magna

As one of trusted IT solution providers in Indonesia, since 2017, SMG is continuously adopting and discovering new solutions to solve today's business challenges. As part of CTI Group, SMG comes with the goal to be the most preferred IT solution partner in Indonesia. SMG will work closely to every client's business to determine what IT solutions they need and how it will benefit their company to compete in today's competitive world with fast-changing market demands.

Cloud Solution

1) Google Cloud Platform

Google Cloud Platform (GCP), offered by Google, is a suite of cloud computing services that runs on the same infrastructure that Google uses internally for its end-user products, such as Google Search, Gmail, Google Drive, and YouTube.[3] Alongside a set of management tools, it provides a series of modular cloud services including computing, data storage, data analytics and machine learning.

Solutions:

1. Application Modernization
Develop and run applications anywhere, using cloud-native technologies like containers, serverless, and service mesh.

2. Artificial Intelligence
Add intelligence and efficiency to your business with AI and machine learning.

3. APIs and Applications
Securely unlock important data with APIs, automate processes, and create applications across clouds and on-premises without coding.

4. Databases
Migrate and manage enterprise data with security, reliability, high availability, and fully managed data services

5. Data Cloud
Unify data across your organization with an open and simplified approach to data-driven transformation that is unmatched for speed, scale, and security with AI built in.

6. Digital Transformation
Accelerate business recovery and ensure a better future with solutions that enable hybrid and multicloud, generate intelligent insights, and keep your workers connected.

7. Infrastructure Modernization
Migrate and modernize workloads on Google's global, secure, and reliable infrastructure.

8. Productivity and Collaboration
Change the way teams work with solutions designed for humans and built for impact.

9. Security
Detect, investigate, and protect against online threats

10. Smart Analytics
Generate instant insights from data at any scale with a serverless, fully managed analytics platform that significantly simplifies analytics.

11. Startups and SMB
Accelerate startup and SMB growth with tailored solutions and programs.

Product Overview

Compute Engine
Virtual machines running in Google's data center.

Cloud Storage
Object storage that's secure, durable, and scalable.

Cloud SDK
Command-line tools and libraries for Google Cloud.

Cloud SQL
Relational database service for MySQL, PostgreSQL, and SQL Server.

Google Kubernetes Engine
Managed environment for running containerized apps.

BigQuery
Data warehouse for business agility and insights.

Cloud CDN
Content delivery network for delivering web and video.

Dataflow
Streaming analytics for stream and batch processing

Operations
Monitoring, logging and application performance suite.

Cloud Run
Fully managed environment for running containerized apps.

Anthos
Platform for modernizing existing apps and building new ones.

Not seeing what you're looking for?

2) Google Collaboration [Google Workspace]

Google Workspace seamlessly integrates all of the core elements of work, like email, chat, voice and video calling, document, storage, task management, security tools, and admin controls so everyone can easily connect, create and collaborate, easily and secure.

Flexible
A solution that makes it easy to work securely from anywhere.

Innovative
Immersive, human-centered experiences keep people connected.

Helpful
Industry-leading AI Helps focus on high-value work.

Trusted
Secure, cloud-based controls that are easy to manage

IT Security

Providing reliable IT security solutions, SMG allows enterprise maintains the integrity and confidentiality of sensitive information by mitigating enterprise from any potential cyber threats.

Network Access Control

Control and manage all the access that connect to your network with network access control (NAC). By providing NAC, SMG will help you to set policies and security perimeter to manage user's access and protect your network from unauthorized users.

Next Generation Firewall

Overcome the advancement of today's cyber threats with Next-Generation Firewall (NGFW) by SMG. This solution will inspect incoming or outgoing traffic, control your applications, prevent intrusions, and gain threat intelligence, allowing you minimize the risk of data breaches.

Privileged Access Management

Develop a better enterprise's cybersecurity strategies by applying privileged access management (PAM). SMG provides PAM system that offers a high level of security by monitoring and recording all activities of privileged users, keeping credentials of privileged users are in a centralized vault to prevent data breaches and insider threats.
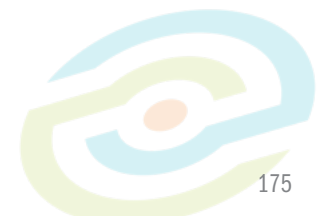

Web Application Firewall

As enterprise becomes more reliant to the web to enhance customer's experience, deploying web application firewall (WAF) has become an indispensable part. Providing comprehensive and advance WAF, SMG is trusted to help you avoid app vulnerabilities, detect attacks earlier, and stop them from occurring to your system.

Vulnerability Management

Proactively mitigate and prevent the exploitation of your IT vulnerabilities with SMG's vulnerability management. With comprehensive vulnerability management, SMG will help you identify, evaluate, report, and treat security vulnerabilities that exist in your IT infrastructure, to stay ahead from cyber threats.
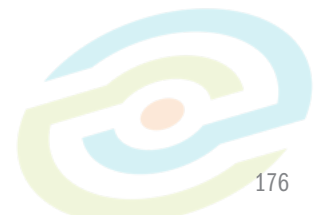

Services

Implementation
Deploy and integrate your IT infrastructure and solutions quickly and effectively with the most qualified manners possible provided by SMG.

Preventive
Get the best way to prevent any hardware failure or IT system downtime with SMG's best preventive maintenance service.

Corrective
SMG will assist you to identify, isolate, and rectify the existing IT issues, intended to perform restoration for every IT asset's failure and let you resume business operations as quickly as possible.
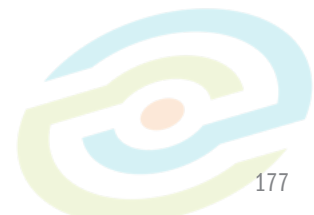

About VTI

Founded in 2007 and now part of the CTI Group, Virtus delivers a comprehensive portfolio of IT infrastructure solution products as well as supporting services for enterprise information systems. Being a fully supported member of the PT. Computrade Technology International (CTI) Group of Companies, Virtus has gradually earned an outstanding reputation in its unpararelled expertise and on-time product distribution and service in the IT industry. We strive to ensure that our company and people guarantee our business partners and end-users the highest levels of service,responsiveness and dependability.

Product Issuer   : 3Dolphins
Issuer's Business Type   : Social Relation Management
Headquarter   : Indonesia
Product Website   : https://3dolphins.ai/ & https://www.inmotion.co.id/
Target Market   : Cross Industry
Solutions   : Marketing SRM, Chatbot SRM, Sales SRM, Service SRM
Service Scale   : SMB & Enterprise

ABOUT

3Dolphins is a solution to improve customer digital experience where marketing, sales and service can create an ecosystem with customer-centric approach

PRODUCT OVERVIEW

Marketing SRM to post social media dan broadcast message.

- Schedule broadcast: Get the content distributed timely.
- Fallback broadcast: When messages are failed to be sent, you can set the notification to stay in the know.
- Personal or bulk broadcast: Send message by per person or customized list of group.
- Configure profile: You can set the detailed profile about your company.
- Overview message: Review your message before send them away.
- Inquiry contact: We help you to check the contact validity.
- Download report: Save the details and analytics of your campaigns.
- Submit and status template: Create and track your content approval inside the dashboard.
- APIs access: Integrate with third-party system easily with our open API.
- Schedule social media post: We won't let you slip away any campaign schedule you've made.

Chatbot SRM with ability to make conversation 24/7 to provide customer service through chat.
Dealing with customers' transactional inquiries might be exhausting and reducing our focus in maintaining great communication with those who are more potential. Provide better communication with Conversational Automation through Chatbot.

Sales SRM for analyzing, task reminder pekerjaan and manage pipeline.

- Deals automation: Our flexibility lets you see which works and which takes a long time without bothering to track each manually.
- Deals analytic dashboard: Look at the insights of what your team has done in the progress of the sales.
- Rotten deals and reminder: Don't let your deals rot! We remind you when your deal idles too long.
- Task management: Get your team focus on the things that matters.
- Easy integration to any system with ProcessFlow: Enrich your accessibility in customer journey with Process Flow integrations.
- Single sign On: Log in quicker and more secure using SSO. We support SAML 2.0 & LDAP.
- Available on mobile app: All are available on your mobile phone.

Service SRM for booking ticket from CS to team related with the case.

- Supports 20+ channels: We connect you through 20+ channels to serve customers.
- Ticket analytic dashboard: Get on the ticketing flow with analytic tickets dashboard.
- Ticket automation: Automate your tickets to eliminate repetitive works.
- Single sign on: Log in quicker and more secure using SSO. We support SAML 2.0 & LDAP.
- Service hour & SLA management: Set the service hours and manage SLA for the team's KPI.
- NPS survey: The tools to record all data analysis of your customer's satisfaction feedback.
- APIs access: API Connect offers multi-layered security and can move information through a single gateway using some of the highest levels of encryption.
- Easy integration to any system with ProcessFlow: The simple way to translating codes into nodes enables you to overview the end-to-end process of source enrichment for a bot in a simple interface.
- Advanced ticket distribution system: A powerful feature that allows you to create rules for handling tickets automatically.
- Available on mobile app: All are available on your mobile phone.

Specialty and uniqueness:
Fitur Advance NLP - Think Conversation, customizable with flexibility to serve the customer. Integrated from marketing, chatbot, sales and service SRM.

Product Issuer	: Schneider
Issuer's Business Type	: Electrical equipment
Headquarter	: West Kingston, South Kingstown, Rhode Island, United States
Product Website	: https://www.apc.com/id/en/
Target Market	: Home/home office, Business networks, Access provider networks, Data centers and facilities
Solutions	: Datacenter Facility
Service Scale	: Enterprise

ABOUT

Schneider's purpose is to empower all to make the most of our energy and resources, bridging progress and sustainability for all. At Schneider, we call this Life Is On.

We drive digital transformation by integrating world-leading processes and energy technologies to realize full efficiency and sustainability opportunities for your business. We provide endpoints to cloud integration connecting products, controls, software and services. We enable lifecycle solutions from design and build to operate and maintain phases through a digital twin. We deliver capabilities to transform from site-to-site to an integrated company management. Our integrated solutions are built with safety, reliability and cybersecurity for your homes, buildings, data centers, infrastructure and industries.

PRODUCT OVERVIEW

Offers / List of Products

- Uninterruptible Power Supply (UPS)
- Surge Protection and Power Conditioning
- Cooling
- Security and Environmental Appliances
- Racks and Accessories
- IT Power Distribution
- Prefabricated Data Center Modules
- Critical Power and Cooling Services

Uninterruptible Power Supply (UPS):

Schneider Electric's fully integrated uninterruptible power supply solutions can provide your business with the highest levels of availability, reduced total cost of ownership (TCO) and improved energy efficiency.

Surge Protection and Power Conditioning:
Explore Schneider Electric surge protection, harmonic filtering and voltage regulation from home to data center to industrial environments.

Cooling:
Discover Schneider Electric cooling solutions for IT equipment from network closets to data centers.

Security and Environmental Appliances:
Explore Schneider Electric security and environmental appliances to ensure your IT assets are protected against environmental or human physical threats causing disruption or downtime.

Racks and Accessories:
Explore Schneider Electric racks, enclosures and accessories for IT equipment from network closets to data centers.

IT Power Distribution:
Explore Schneider Electric power distribution and transfer switch solutions for IT equipment from network closets to data centers.

Prefabricated Data Center Modules:
Discover Schneider Electric prefabricated IT modules available in a large range of sizes and configurations to provide simple and easy to deploy data center infrastructure for any application.

Schneider Electric prefabricated powers and skids significantly reduce the complexity and time to deploy critical data center power.

Critical Power and Cooling Services:
Schneider Electric Critical Power & Cooling Services provide the expertise, services, and support you need for your building, industry, power, or data center infrastructure. Our world-class services offer a smart way to protect your equipment, ensuring that your system is always operating at peak performance, prolonging its lifespan.

Data Center Monitoring:
EcoStruxure IT offers DCIM solutions for today's and tomorrow's data center challenges. It delivers higher levels of resiliency, security and sustainability to meet these challenges. EcoStruxure IT software revolutionizes the management of hybrid IT infrastructures. It ensures accurate and effective communication.
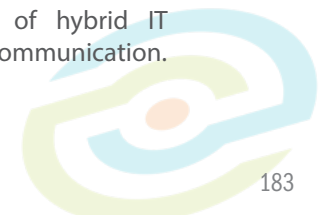

ARCHER

Product Issuer	: RSA Security
Issuer's Business Type	: Computer & Network Security
Headquarter	: USA
Product Website	: https://www.archerirm.com/
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Cross Industry
Solutions	: Hardware, Software & IS/Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

RSA, The Security Division of EMC, is the premier provider of intelligence-driven security solutions. RSA helps the world's leading organizations solve their most complex and sensitive security challenges: managing organizational risk, safeguarding mobile access and collaboration, preventing online fraud, and defending against advanced threats. RSA delivers agile controls for identity assurance, fraud detection, and data protection; robust Security Analytics and industry-leading GRC capabilities; and expert consulting and Advisory services.

PRODUCT OVERVIEW

RSA Web Threat Detection
Is Software that collects and analyzes massive amounts of real-time data from website traffic to provide web session intelligence and real-time analysis of user behavior
- Real Time threat detection
- Enhanced visibility
- Streaming Analytics
- In-line visibility, without hassle

RSA Identity and Access Management
Are Provide identity, security, and access management for physical, virtual, and cloud-based environments

RSA Archer GRC
The ultimate goal of this solution is build an efficient governance, risk, and compliance (GRC) program that supports collaboration across IT, finance, operations, and legal units.

RSA Fraud Prevention
Achieve fraud prevention regardless of channel by preventing cybercrime, identity theft, and other external threats targeting your customers.

RSA Secure ID
RSA SecurID provides world-leading two-factor authentication. RSA SecurID extends security to bring your own device (BYOD), cloud, and mobile as well as traditional virtual private network (VPN) and web portals. RSA SecurID solutions comprise three primary components: authenticator, platform, and agents.

RSA Security Analytics
Is Software that gives security operations teams' complete visibility to detect, investigate, and take targeted action against even the most advanced of attacks before they can impact the business.
- Complete visibility from the endpoint to the cloud
- Detect and analyze advanced attacks
- Investigate incidents at warp speed
- Choose the deployment that is right for you

ARISTA

Product Issuer	: Arista Networks
Issuer's Business Type	: IT Infrastructure
Headquarter	: USA
Product Website	: www.arista.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Cross Industry
Solutions	: Data Center Networking
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Arista Networks was founded to pioneer and deliver software-driven cloud networking solutions for large data center storage and computing environments. Arista's award-winning platforms, ranging in Ethernet speeds from 10 to 100 gigabits per second, redefine scalability, agility and resilience. Arista has shipped more than five million cloud networking ports worldwide with CloudVision and EOS, an advanced network operating system. Committed to open standards, Arista is a founding member of the 25/50GbE consortium. Arista Networks products are available worldwide directly and through partners.

PRODUCT OVERVIEW

Arista Networks is the leader in building scalable high-performance and ultra-low-latency networks for today's data center and cloud computing environments.

Arista vEOS®
World's Most Advanced Network Operating System

EOS CloudVision®
Network-Wide Cloud Automation

Arista 7500E Series
High Density 10/40/100 GbE Big Buffer, Lossless Modular Spine Switch

Arista 7320X Series
High Density Cloud Optimized 40/100GbE Modular Spine Switch

Arista 7300X Series
High Density 10/40 GbE Modular Spline™ Switching

Arista 7200E Series
High Performance 10/40/100GbE, Ultra Deep Buffer, Lossless Leaf Switches

Arista 7260X and 7060X
High Performance 10/40/100GbE Fixed Configuration Switches

Arista 7250QX Series
Dense 10/40 GbE 2RU Spline platform

Arista 7150 Series
Leading Ultra Low Latency 1RU Leaf Platform

Arista 7050X Series
Arista 7050X Series 1RU and 2RU 10/40 GbE Multilayer Leaf Switches

Arista 7048 Switch
Data Center Class Gigabit Ethernet Leaf Switch

Arista 7010 Switch
High Performance and Power Efficient 1G Ethernet Switch

Purpose-built hardware, and Arista EOS, the world's most advanced network operating system, provide single-binary system images across all platforms, maximum system uptime, stateful fault repair, Zero Touch Provisioning, Latency Analysis and a fully accessible Linux Shell. Arista Ethernet switches are the perfect network solution for your most demanding workloads.With native support for VMware Virtualization and hundreds of Linux applications integrated into hardware platforms designed to meet the stringent power and cooling requirements of today's most demanding data centers, Arista delivers the most efficient and best performing 10Gb Ethernet platforms.

virtual Cloud Builders

ARISTA

ACCESS POINT SOLUTION

Arista Access Point Solution

Arista's WiFi architecture overcomes the challenges and limitations of legacy controller architectures with a scalable management plane leveraging cloud principles, distributed control plane and modern data plane architecture.

Secure

WiFi Networking:

The rising number of connected end-users and IoT devices on campus networks makes them appealing targets for cybercriminals. Arista's WiFi solution is built on a zero-trust architecture and includes a comprehensive set of security features, including.

- Security features, including the industry-leading Wireless Intrusion Prevention System, which provides secure BYOD policy enforcement
- Zero Trust Networking

Choose from a variety of indoor and outdoor Wi-Fi 6 and the latest WiFi 6E access points to provide users with reliable, high-performance wireless connectivity.
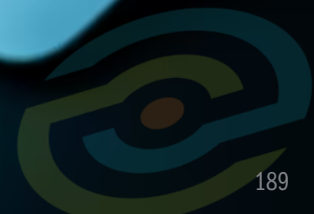

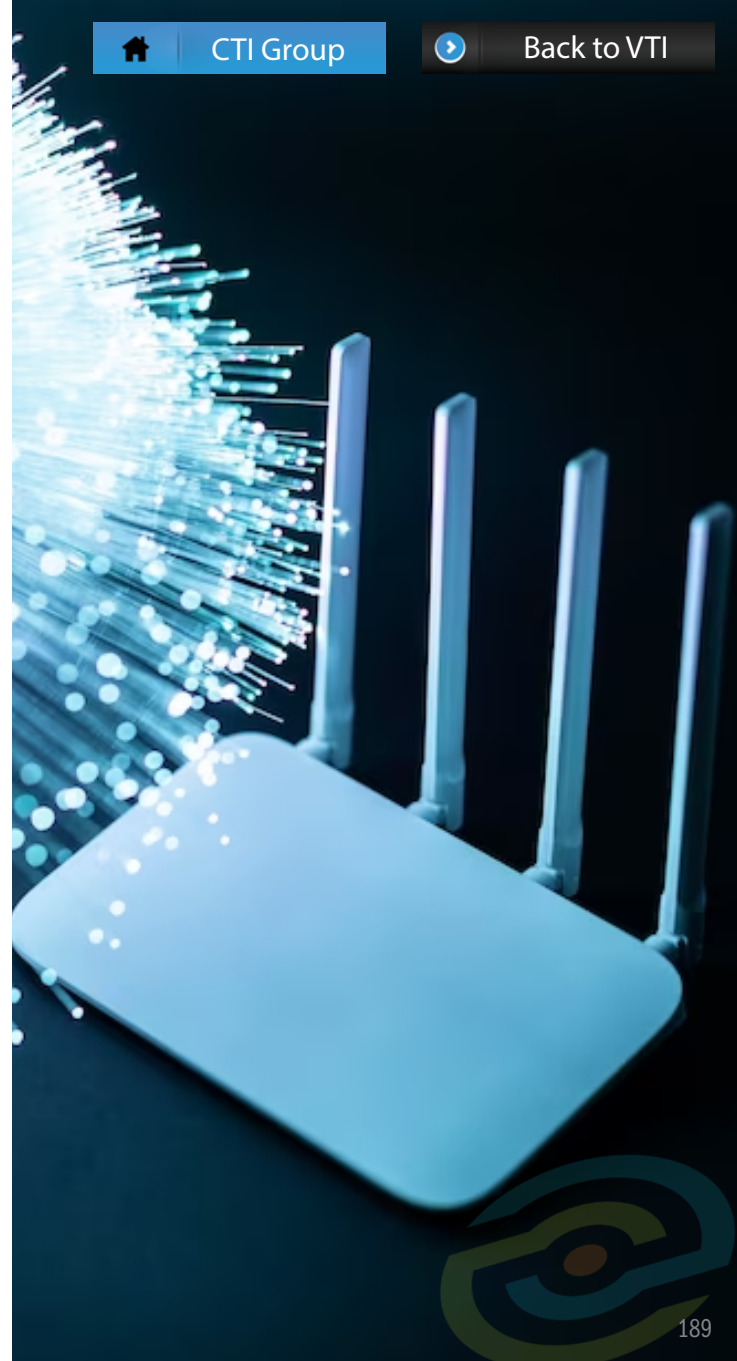

WiFi 6E Access Points

Are advanced WiFi technology, and the Arista WiFi 6E access points offer optimized wireless performance for high bandwidth, ultra-low latency applications, and IoT connectivity. WiFi 6E access points are engineered for immediate and future global use while protecting investments.

WiFi 6 Access Points

All Arista WiFi Access Points support Wireless Intrusion Prevention System (WIPS) functionality, either via the multi-function radio or with background scanning enabled on the access radios. WiFi 6 is ideal for critical, high-density networks serving a wide range of clients and applications. Large schools, remote offices, auditoriums, meeting rooms and corporate campuses are common deployment scenarios. A variety of indoor or outdoor access points are available.

Arista NDR Solution

Arista NDR helps organizations accelerate their journey to Zero Trust. By seamlessly integrating with existing security investments, security teams can easily monitor high-risk incidents and compromised entities on a single platform, right out of the box, without agents, manual setup, or complicated integrations.
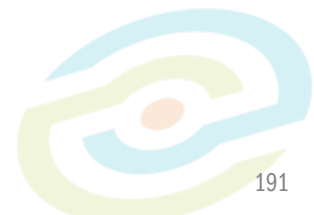

Understand the Attack Surface

- View the complete potential attack surface and associated business assets across the entire enterprise environment.
- Track all assets as they move across the network, while detecting malicious intent across all entities.
- Watch as the platform autonomously develops an understanding of the relationships and similarities between entities.

Identify the threats that others may have missed

- Examine cumulative evidence over time to understand each entity's malicious intent.
- Go beyond alerts by using the platform to autonomously investigate threats; enable security teams to visualize the complete incident kill chain across entities, protocols, and time
- Automate threat hunting and build custom detection models for unique risks, enabling security analysts to resolve threats in context.

Deliver faster, more effective reactions

- Access actionable information about the entities that pose the greatest business risk and respond effectively.
- Access comprehensive, descriptive, and investigative responses that provide context for threats and event details.
- Provide forensic artifacts and timelines to arm defenders with strong evidence.
- Share insights with IT and security infrastructure teams to leverage investments in place.

Product Issuer	: CrowdStrike
Issuer's Business Type	: Endpoint Security & Protection Products, Manage Services
Headquarter	: Austin, Texas, United States
Product Website	: https://www.crowdstrike.com
Target Market	: All Industry
Solutions	: Next-Gen Antivirus, Threat Intelligence, USB Device, Host Firewall Control, Endpoint Detection&Response, Threat Hunting, IT Hygine, Incident Response & Proactive Services
Service Scale	: Enterprise environments

ABOUT

CrowdStrike has redefined security with the world's most advanced cloud-native platform that protects and enables the people, processes and technologies that drive modern enterprise. CrowdStrike secures the most critical areas of enterprise risk – endpoints and cloud workloads, identity, and data – to keep customers ahead of today's adversaries and stop breaches. Powered by the CrowdStrike Security Cloud, the Falcon Platform leverages real-time indicators of attack, threat intelligence on evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities – all through a single, lightweight agent.

With CrowdStrike, customers benefit from superior protection, better performance, reduced complexity and immediate time-to-value.

PRODUCT OVERVIEW

- Falcon Prevent
CrowdStrike's cloud-native next-gen antivirus protects against all types of attacks from commodity malware to sophisticated attacks - even when offline. Falcon Prevent is fully operational in seconds, no need for signatures, fine-tuning, or costly infrastructure. From initial deployment through ongoing day-to-day use, Falcon Prevent operates without impacting resources or productivity.

- Falcon X
Automatically investigate incidents and accelerate alert triage and response. Built into the Falcon Platform, it is operational in seconds.

- Falcon Device Control
Falcon Device Control provides the insights and granular control required to enable safe usage of USB devices across your organization. Automatically gain the complete visibility needed to monitor how USB devices are used in your environment according to your prescriptive policies. Falcon Device Control does not require any additional endpoint software installation or hardware to manage

- Falcon Firewall Management
Falcon Firewall Management makes it easy to create, manage and enforce policies with a simple, centralized approach. Defend against network threats, and gain instant visibility to enhance protection and inform action. Delivered via the same lightweight Falcon agent, management console and cloud-native architecture, it deploys and is operational in minutes.

- Endpoint Detection & Response
Continuous monitoring captures endpoint activity so you know exactly what's happening - from a threat on a single endpoint to the threat level of the organization. Falcon Insight delivers visibility and in-depth analysis to automatically detect suspicious activity and ensure stealthy attacks - and breaches - are stopped. Falcon Insight accelerates security operations, allowing users to minimize efforts spent handling alerts and reduce time to investigate and respond to attacks.

- Falcon Overwatch
OverWatch hunts relentlessly to detect and disrupt the stealthiest sophisticated threats: the 1% of the 1% of threats that go undetected. OverWatch delivers the best results by leveraging cloud-scale data, custom tools and up-to-the-minute threat intelligence and augmenting this with insights from skilled analysts to hunt with unprecedented speed and scale. OverWatch delivers results for organizations of all sizes, operating as a seamless extension of your team - minimizing overhead, complexity and cost.

- Falcon Discover
Monitor everything from one convenient, powerful dashboard, and quickly dive in to explore applications, accounts and assets using real-time and historical data. Get contextual information for all of your systems instantly, utilizing dashboards, graphs, charts and search functionality to drill down into supporting data. Leverage the single lightweight CrowdStrike Falcon agent to keep your systems and users free to do their jobs.
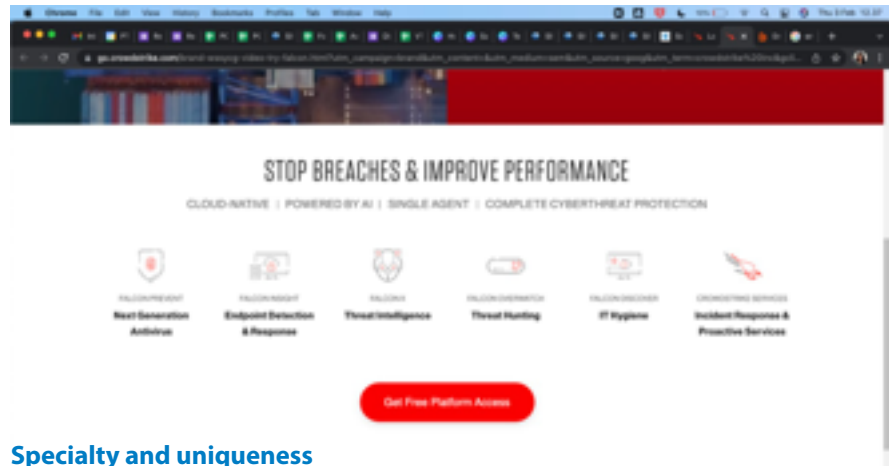

- Falcon LogScale

Centralized log management technology that allows organizations to make data-driven decisions about the performance, security and resiliency of their IT environment. Falcon LogScale enhances observability for all log and event data by making it fast and easy to explore critical log information, eliminate blind spots and find the root cause of any incident, gives IT organizations a single platform that can store, analyze and retain all log and events data at petabyte scale, and minimizes the computing and storage resources required to ingest, search, transform and retain log data.

- CrowdStrike Services

Reduce risk across the critical areas of your IT attack surface with CrowdStrike Services. We help you prepare and train to defend your organization against sophisticated threat actors. We help you respond to attacks and recover from incidents with speed and precision. We provide actionable recommendations so you can fortify your cybersecurity practices and controls.

STOP BREACHES & IMPROVE PERFORMANCE

CLOUD-NATIVE | POWERED BY AI | SINGLE AGENT | COMPLETE CYBERTHREAT PROTECTION

Specialty and uniqueness

SINGLE UNIVERSAL AGENT AND POWERFUL APIs

An intelligent, lightweight agent unlike any other blocks attacks — both malware and malware-free — while capturing and recording endpoint activity. Leverage rich APIs for automation of the Falcon platform's management, detection, response and intelligence

• Minimal impact on endpoint performance and end-user productivity
• Accelerated threat investigation and response with smart-filtering technology to capture and record relevant host activity
• Easy deployment with cloud-based architecture for speed and instant operationalization — no reboots required after installation
• Optimal performance by automating and managing all platform functionality with APIs
• Seamless integration with existing workflows and CI/CD pipelines

Target Market	: All industries
Solutions	: Server, Storage, Network, Backup/Data Protection, Disaster Recovery

ABOUT

Dell Technologies, formerly known as Dell EMC since its acquisition in 2016, committed to provide all solution for transforming businesses, shaping the future of innovation.Dell Technologies enables organizations to modernize, automate and transform their data center using industry-leading converged infrastructure, servers, storage and data protection technologies. Businesses get a trusted foundation to transform their IT and develop new and better ways to work through hybrid cloud, the creation of cloud-native applications and big data solutions.

PRODUCT OVERVIEW

1. Hyper Converged Infrastructure (HCI) Solutions

Dell Technologies HCI portfolio is built on the pillars of modern IT: flash, cloud-enabled, scale-out and software-defined technologies. Accomplish complex workloads with ease and agility. Scale as business expands. Operate more efficiently.

VxRail
A fully integrated systems appliances. It consolidates compute, storage, and virtualization which pre-configured with VMware. Simplifies VMware cloud adoption, drives operational efficiencies with full stack integrity and automated end-to-end lifecycle management and inclusive AI based predictive analytics.

PowerFlex
Dell PowerFlex, a software-defined infrastructure, provides a strong foundation for customers looking to modernize their IT infrastructure. The journey begins with full consolidation, enabling customers to unify separate, disparate workloads onto a unified platform, maximizing TCO savings. PowerFlex provides a comprehensive set of out-of-the-box tools, including PowerFlex REST API, Dell Container Storage Modules (CSM) and CSI drivers, and PowerFlex Ansible modules, all designed to increase operational efficiency and business agility. In addition, software-based storage optimization ensures uninterrupted IO and superior throughput capabilities with sub milli-second latency and linear scalability up to a thousand nodes. These key differentiators enable customers to achieve the best possible

results, whether they are upgrading a high performance database or streamlining an extensive application landscape.

AzureHCI
Dell's Integrated System for Microsoft Azure Stack HCI provides a fully productized, validated, and supported hyperconverged solution that enables infrastructure modernization for improved application uptime and performance, simplified management and operations, and lower TCO. Azure Stack HCI combines Azure Stack HCI OS software-defined compute, storage, and networking capabilities with Dell AX nodes, providing a secure, scalable, high-performance foundation for software-defined infrastructure.

XC Series
The Dell XC family of HCI solutions combines Nutanix HCI software with Dell XC nodes based on the Dell PowerEdge server platform. These nodes offer a wide range of configurations with support for the latest generations of Intel and AMD processors, providing one of the industry's most versatile and scalable HCI platforms for Nutanix deployments. In addition, the factory-tested XC systems can be quickly deployed for any virtual workload.

2. Converged Infrastructure - Modular Infrastructure

PowerEdge MX
An integrated solution designed for enterprise data center density with easy deployment, management, and maximum longevity. PowerEdge MX is a 7U height and features scalable fabric architecture to support new compute technologies, new storage types and new connectivity innovations well into the future.

PowerOne
This is a new all-in-one system that harnesses the power of Dell Technologies, bringing together compute server, storage, networking, virtualization, and data protection into one streamlined autonomous infrastructure system. With all-in-one simplicity, autonomous operations, and flexible consumption options, PowerOne can accelerate your organization's shift from traditional operations to modern cloud outcomes.

3. Data Storage System

Entry
PowerVault (SAN Storage)

Midrange
Unity and PowerStore (SAN and NAS Storage)

High End
PowerMax (SAN Storage)

UDS (Unstructured Data Storage)
ECS (Object Storage)
PowerSale (File Storage)

4. Data Protection (Backup & Recovery)

Backup Storage
Data Domain

Appliances (Bundling Hardware and Software)
DP Series
PowerProtect DP Series is the integrated appliance solution in the PowerProtect portfolio.

In addition to accelerating backup and recovery, this latest version of the IDPA provides replication, deduplication, instant access, and recovery with seamless VMware integration. One-stop data protection with low cost of protection, long-term retention and disaster recovery to the cloud makes this the ultimate data protection solution for organizations of all sizes. Dell Technologies Storage improves the efficiency of our storage portfolio with each generation, demonstrating our commitment to sustainability.

DM 5500
Easy to configure and manage, the PowerProtect Data Manager appliance provides a consistent user experience while automating the discovery and protection of databases, virtual machines, file systems, and Kubernetes containers. Orchestrate protection instantly through an intuitive interface. Enable data owners to perform self-service backup and restore operations from within their native applications, with centralized governance and oversight. Keep your data secure and available with PowerProtect Data Manager.

DPS (Data Protection Suite)
Software Networker + Software Avamar

Software Backup
PPDM (Power Protect Data Manager)
PowerProtect Data Manager provides efficient data protection capabilities using Dell's latest Trusted Protection Storage architecture. With operational simplicity, agility, and flexibility, PowerProtect Data Manager enables you to protect, manage, and recover your data and quickly adapt to future IT needs. Protect cloud-native workloads across multiple public clouds with our included SaaS-based PowerProtect Cloud Snapshot Manager.
- Directly oversee the protection process through an intuitive interface and empower data owners to independently perform backup and recovery operations from their original applications.
- Ensure compliance and meet the most stringent service level objectives.
- Expand optimized protection to multiple clouds with cloud-to-cloud backup, in-cloud backup, long-term retention, and cloud disaster recovery.
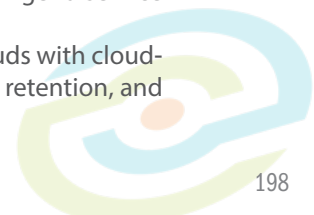

- Improve business security with cyber resilient data protection for rapid recovery.
- Use CloudIQ for cloud-based monitoring and analytics for rapid response and resolution.
- Maintain continuity and reliability with your existing Dell PowerProtect devices.

CRS (Cyber Recovery Solution)

Modernize and automate your recovery and continuity strategies while leveraging the latest intelligent cyber threat detection and response tools to reduce business risk from cyber attacks and create a more cyber resilient approach to data protection. Dell PowerProtect Cyber Recovery provides proven, advanced and intelligent protection to isolate critical data, identify suspicious activity and accelerate data recovery so you can quickly resume normal business operations.

5. Servers

PowerEdge Rack & Tower Server

Choose from a complete portfolio of one, two or four-socket rack/tower servers to deliver high core density for your traditional applications, virtualization and cloud-native workloads. R series for Rack density model and T series for Tower model.

PowerEdge Blade Server/Modular.

- PowerEdge MX – Modular, 7U integrated solutions designed for enterprise data center density and future extensibility with easy deployment and management
- PowerEdge FX Series – Hybrid 2U rack integrated solution delivering scalable performance with rack flexibility for demanding workloads

- PowerEdge VRTX – Single, compact tower- and rack-capable integrated server solutions optimized for small, remote and branch offices
- PowerEdge C Series – Server node providing a dense, accelerated computing platform for high-performance cognitive workloads

6. Networking

PowerSwitch

Networking solutions help optimize your data center based on an open ecosystem where organizations can pick from innovative, industry-standard network applications, OS and hardware.

PowerEdge Modular System Switches

Maximize the demanding connectivity needs of today's data center workloads while also lowering overall costs and network management complexity.

PowerSwitch Campus and Access

Dell Technologies N-series is a family of energy-efficient, cost-effective 1GbE and 10GbE switches designed for modernizing and scaling Campus network fabric

Product issuer	: Elastic
Business type	: Search and Analytics Engine
Headquarter	: Mountain View, CA
Website	: www.elastic.co
Target Market	: Cross Industry
Solutions	: Elastic Enterprise Search, Elastic Observability, Elastic Security

ABOUT

Elasticsearch is a distributed, open source search and analytics engine for all types of data, including textual, numerical, geospatial, structured, and unstructured. Elasticsearch is built on Apache Lucene and was first released in 2010 by Elasticsearch N.V. (now known as Elastic). Known for its simple REST APIs, distributed nature, speed, and scalability, Elasticsearch is the central component of the Elastic Stack, a set of open source tools for data ingestion, enrichment, storage, analysis, and visualization. Commonly referred to as the ELK Stack (after Elasticsearch, Logstash, and Kibana), the Elastic Stack now includes a rich collection of lightweight shipping agents known as Beats for sending data to Elasticsearch.

PRODUCT OVERVIEW

SEARCH. OBSERVE. PROTECT.

Search is foundational to a wide variety of experiences — from finding documents to monitoring infrastructure to protecting against security threats. Elastic is a search company that powers three solutions built on one powerful stack: the Elastic Stack. Deploy them anywhere (from the cloud to bare metal) to instantly find actionable insights from any type of data.

THREE SOLUTIONS :

Enterprise Search
Powerful search for documents and results living in websites, applications, and workplaces.

Observability
Unified analysis across logs, metrics, APM, and uptime monitoring.

Security
Threat prevention, detection, and response with SIEM and endpoint security.

Product Issuer	: ExtraHop
Issuer's Business Type	: Cybersecurity (Network, Detection, and Response)
Headquarter	: Seattle, WA, United States
Product Website	: www.extrahop.com
Target Market	: Cross Industry
Solutions	: Hardware & Software
Service Scale	: Enterprise & Multinational Company (CISO, SOC, Security Architect)

ABOUT

ExtraHop is on a mission to stop advanced threats with security that can't be undermined, outsmarted, or compromised. We are part of a dynamic cyber defense platform that uses cloud-scale AI to help enterprises detect and respond to advanced threats before they can compromise your business. With complete visibility from ExtraHop, enterprises can detect intrusions, conduct threat hunting, and investigate incidents with confidence.

PRODUCT OVERVIEW

Reveal(x) is the only Cloud-Native Network Detection and Response product that provides the scale, speed, and visibility required by enterprise security teams to detect and respond to threats and rise above the noise of increasingly complex hybrid networks architectures, containerized applications, and the cloud.

Security:
ExtraHop Reveal(x) Enterprise

Cloud:
ExtraHop Reveal(x) 360

IT Ops:
ExtraHop Reveal(x) Network Performance

EXTRAHOP PRODUCTS

SECURITY
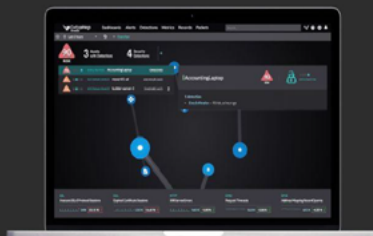

CLOUD

PERFORMANCE

ExtraHop Reveal(x)
Network detection and response for the hybrid enterprise

ExtraHop Reveal(x) 360
Cloud-native, SaaS-based network detection and response

ExtraHop Reveal(x) for IT Operations
IT analytics powered by machine learning

Speciality
"DETECT THREATS THAT OTHER TOOLS MISS"

Automated Inventory
Reveal(x) ensures an always up-to-date device inventory with no manual effort by auto-discovering and classifying everything that talks on the network.

Peer Group Detections
By automatically sorting devices into highly specific behavioral peer groups, Reveal(x) can spot strange behavior with minimal false positives.

Perfect Forward Secrecy Decryption
Reveal(x) decrypts SSL and TLS 1.3 encryption passively in real-time so you can maintain visibility while leveraging the latest encryption standards.

Advanced Machine Learning
With machine learning using 5,000+ features, Reveal(x) detects, prioritizes, and surfaces threats against your critical assets.

Automated Investigation
Reveal(x) contextualizes detections from an entire transaction with threat intelligence, risk scores, and asset criticality for easier triage and response.

Confident Response Orchestration
Reveal(x) handles detection and investigation while powerful integrations with solutions like CrowdStrike, Phantom, Demisto, and Palo Alto Networks help you automate remediation.

Reveal(x) Enterprise
ExtraHop Reveal(x) network detection and response automatically discovers and classifies every transaction, session, device, and asset in your enterprise at up to 100Gbps, decoding over 70 enterprise protocols and extracting over 5,000 features to keep our machine learning accurate and precise.

- Automatically detect new, rogue, and unmanaged devices so you always know what's active in your network.
- Comprehensively detect late-stage attack activities using ML-based behavior, rules, and custom triggers.
- Validate and remediate threats rapidly with one-click access to contextual evidence & intelligent response options.

UNIQUENESS » Phantom servicenow paloalto NETWORKS ANOMALI splunk>

Reveal(x) 360

Securing the modern enterprise means protecting a complex web of workloads consisting of hardware, applications, and data spread across the edge, core, remote workforce, and cloud deployments. As organizations expand their presence in the cloud they are also increasing their use of containerized deployments and experiencing challenges in maintaining visibility. With ExtraHop Reveal(x) 360, you can unify security controls across hybrid, multi-cloud, containerized, and IoT environments with network detection and response (NDR)—truly cloud-native security.

Reveal(x) 360 takes a SaaS-based approach to deliver NDR for hybrid and multi-cloud (AWS, Google Cloud, Azure) deployments. To start using Reveal(x) 360, simply identify environments you want to secure and deploy a Reveal(x) 360 sensor to gain unified visibility in a single management pane—accessible from anywhere. ExtraHop sensors decrypt and analyze network traffic, using cloud-scale machine learning, for behavioral analysis, real-time threat detection, and investigation performed in Reveal(x) 360.

Reveal(x) 360 offers two models for sensor purchases: reserved priced and consumption-based.
- Detect Advanced Threats
- Inventory & Configuration
- Dependency Mapping
- Monitor Sensitive Workloads & Data
- Forensic Investigation
- Compliance & Audit
- Incident Response
- Vulnerability Assessment
- Threat Hunting

Speciality
"DETECT ADVANCED THREATS THAT OTHER NDR TOOLS MISS"

Hybrid Cloud Security
Access and analyze all cloud-based transactions using the same interface as on-prem infrastructure.

Inventory and Configurations
Automatically discover and classify all cloud assets, track rogue instances, and flag exposed resources.

Hygiene and Compliance
Keep detections in tune with your unique policies with easily customizable alerts and dynamic activity groups.

Decryption and Decoding
Decrypt all SSL/TLS-encrypted traffic and decode 70+ enterprise protocols for comprehensive risk management.

Identity and Access Management
Analyze Active Directory payloads to automatically flag indicators of credential harvesting and brute force attacks.

Cloud-Native Integrations
Automate security settings and limit tool sprawl by integrating with AWS CloudTrail, Amazon CloudWatch and VPC Flow Logs, orchestration systems, and more.

UNIQUENESS

| aws | Google Cloud | Azure |

Reveal(x) Network Performance

Reveal(x) for IT Operations provides real-time visibility into everything from database to cloud traffic by securely decoding over 70 enterprise protocols, including SSL/TLS-encrypted sessions, at line rate (100 Gbps). Using stream processing, Reveal(x) transforms your network data in flight into structured wire data while cloud-scale machine learning helps you uncover and respond to hidden problems and opportunities with zero impact to performance.

ExtraHop offers fully SaaS-based network monitoring through ExtraHop Reveal(x) 360, or self-managed NDR with Reveal(x) Enterprise. By pairing full internal visibility with advanced machine learning that drives automated detection, investigation, and response, Reveal(x) helps IT and network teams work closely with security teams to deliver a reliable, secure experience across hybrid, cloud, and multicloud environments.

Features

a. COMPLETE VISIBILITY

Real-time visibility into all network traffic makes it easy to troubleshoot issues. Reveal(x) works on-premises, in the public cloud, and in hybrid environments, so you have all the data you need in a single unified platform.

b. REAL-TIME DETECTION

Advanced machine learning automatically detects and correlates performance issues and security threats in real time, giving teams the information and context they need to solve problems before they impact customers.

c. INTELLIGENT RESPONSE

Reveal(x) puts you three clicks away from the root cause of any performance issue. With broad context and precise packet details at your fingertips, you'll find answers right away and cut time to resolve by up to 90%.

Product Issuer	: Forcepoint
Issuer's Business Type	: CyberSecurity
Headquarter	: Austin, Texas
Product Website	: https://www.forcepoint.com/
Target Market	: Leading Companies
Solutions	: Network Security Products
Service Scale	: Enterprise

ABOUT

Forcepoint is the leading user and data security cybersecurity company, entrusted to safeguard organizations while driving digital transformation and growth. Our solutions adapt in real-time to how people interact with data, providing secure access while enabling employees to create value

Data-first security: Converged capabilities that protect from endpoint to cloud
Threat and behavior intelligence research: Applying up-to-date threat and behavior intelligence for stronger cyber protection solutions
AI and data science: Leveraging machine learning and analytics for behavioral understanding

Offers / List of Products

Cloud Native Platform:
Forcepoint ONE SSE
Cloud Access Security Broker (CASB)
Zero Trust Network Access (ZTNA)
Secure Web Gateway (SWG)
Remote Browser Isolation (RBI)
Zero Trust Content Disarm & Reconstruction (ZT CDR)

Data Security:
Data Loss Prevention Software-as-a-Service (DLP SaaS)
Data Loss Prevention Enterprise (DLP)
Forcepoint Data Visibility
Risk-Adaptive Protection DLP
Insider Threat

Network Security:
Secure SD-WAN
Next-Gen Firewall
Cross Domain Solutions

Forcepoint ONE SSE:

Forcepoint ONE is a cloud-based, Security Service Edge (SSE) platform. It unifies, simplifies and provides services to enable Zero Trust access and data security, and provides enhanced visibility with security analytics.

Cloud Access Security Broker (CASB):

Sensitive data is difficult to control in the cloud. Forcepoint ONE CASB provides full visibility and control over data in any application, including shadow IT, for safe, high-performance use everywhere.

Forcepoint ONE Zero Trust Network Access (ZTNA):

Forcepoint ONE ZTNA provides controlled access to private apps from anywhere, enabling advanced control over data in use across managed or unmanaged devices.

Forcepoint ONE Secure Web Gateway (SWG):

Forcepoint ONE SWG enables integration of RBI for secure-container rendering of risky sites, and Zero Trust CDR for complete sanitization of all downloadable documents.

Forcepoint Remote Browser Isolation (RBI):

Forcepoint RBI with Zero Trust Content Disarm and Reconstruction (CDR) makes Zero Trust Web Access easy to implement and adopt. Zero Trust Web Access allows employees to safely and efficiently be more productive from anywhere.

Zero Trust Content Disarm & Reconstruction (CDR):

Zero Trust CDR delivers threat-free, pixel perfect, fully revisable and usable files and data to users in near real-time.

Data Loss Prevention Software-as-a-Service (DLP SaaS):

Prevent data exfiltration on the broadest range of devices in real-time across all your channels from a cloud-native DLP platform. Simplify DLP management with over 190 pre-defined policies out of the box.

Data Loss Prevention Enterprise (DLP):

Data security is a persistent challenge. Forcepoint Data Loss Prevention (DLP) enables businesses to discover, classify, monitor, and protect data intuitively with zero friction to the user experience. Audit behavior in real-time with Risk-Adaptive Protection to stop data loss before it occurs.

Forcepoint Data Visibility:

Forcepoint Data Visibility strengthens your data security management and enhances Data Loss Prevention by providing a panoramic view of unstructured data located both on-premises and the cloud. It achieves this by leveraging the power of Artificial Intelligence (AI) and Machine Learning (ML) to significantly increase the speed and accuracy of classification

Risk-Adaptive Protection:

Simplifying data security through personalized automation

Insider Threat:

Unrivaled visibility into user behavior to detect threats from within

Secure SD-WAN:

For Secure Access Service Edge (SASE) to be successful, it requires an alignment of both technology and teams. Not only must the SD-WAN and Security Service Edge (SSE) components of SASE be carefully selected to seamlessly integrate, but Network and Security IT teams must work closely together in the planning and execution to be faster and more successful.

Forcepoint Next-Generation Firewall:

Next-Generation Firewall can be deployed via eight different appliance series to suit any size organization and their unique needs. Each model comes with centralized management, industry-leading integrated security and the dependability needed in modern network security.

Forcepoint Cross Domain Solutions:

Forcepoint Cross Domain Solutions allow organizations to centralize servers where data is stored – be that in a datacenter, the cloud or a hybrid of the two

Headquarters	: Hangzhou, China.
Website	: www.hikvision.com
Target market	: Education, Retail, Traffic, Building, Banking, Safe City
Solutions	: Access Control, Building Solution, Display Solution, Industrial Solution, Education Solution, Seaport Solution, Airport Solution, Smart Parking Solution, Warehouse Solution, Safe City Solution, Intelligent Traffic Solution, Alarm Solution

ABOUT

Hikvision is a world leading provider of security products and solutions. Featuring an extensive and highly skilled R&D workforce, Hikvision manufactures a full suite of comprehensive products and solutions for a broad range of vertical markets. In addition to the security industry, Hikvision extends its reach to smart home tech, industrial automation, and automotive electronics industries to achieve its long-term vision. Hikvision products also provide powerful business intelligence for end users, which can enable more efficient operations and greater commercial success.

PRODUCT OVERVIEW

1. IP CCTV PRODUCT

At Hikvision, we offer a wide array of IP products including Network Video Recorders (NVRs), PTZ dome cameras, panoramic cameras, cameras for special applications and a variety of network transmission equipment and accessories. Designed with the state-of-the-art technology and manufactured to high levels of quality, Hikvision is your one-stop-shop to build a security system that can meet the most complex and demanding requirements.

DeepinView Series

Whether it's a camera focusing at people or vehicles, the DeepinView Series always try to see more with its Deep Learning technology inside. They capture more faces in a single frame from much wider angles; they detect and distinguish human beings and vehicles from other objects with higher accuracy; they recognize vehicle number plates at 98%+ accuracy; and they analyze flows by detecting the queue time and status for resource optimization during peak times. What the DeepinView cameras can offer is not just video and image data, it's the insight you need to build a smarter and safer world.

Panoramic Series

Hikvision's PanoVu Series cameras are perfectly designed for this purpose. The all-in-one cameras can capture excellent panoramic images as well as close-up images to give consideration to both a panorama and detail. The panoramic images are captured by multiple sensors, rendering 180° or 360° imaging with real-time ultra-HD resolution. The integrated design of panoramic and PTZ cameras offers fast detail positioning over panoramic areas.

PTZ Series

Hikvision offers a wide selection of PTZ cameras for different application scenarios: high-end DF series network PTZ, AF series Turbo HD PTZ, PTZ positioning cameras, traffic PTZ, and more. These PTZ cameras work well as a standalone solution and integrated with other cameras. With Hikvision's PTZ cameras, you can rapidly respond to security events and leave no blind spot unnoticed.

Explosion-Proof & Anti-Corrosion Series

Hikvision's Explosion-proof and Anti-Corrosion series offer special cameras for applications in hazardous and extreme environments. The explosion-proof cameras use 3.5-mm stainless steel housing and a specially designed joint to survive external explosions and keep providing continuous services in the event of fire and explosions. The Hikvision anti-corrosion cameras, constructed of 316L stainless steel, are robust enough to withstand most corrosive

Thermal Series

Hikvision thermal products feature three innovative functions for better environmental adaptability: Auto Gain Control (AGC), Digital Detail Enhancement (DDE), and 3D Digital Noise Reduction (DNR). AGC adjusts the dynamic range of the image to help the image retain balanced brightness; DDE, based on an algorithm defining region of interest, renders more detail in the on-screen image; and 3D DNR further minimizes the influence of "hot pixels", making images appear even sharper.

Network Video Recorders

Hikvision embedded Network Video Recorders offer the benefits of managing bandwidth and storage with the latest H.265+ compression technology. The all-in-one NVRs have powerful capabilities, supporting up to 32 MP resolution for recording. Ultra-high definition output up to 4K is now supported on all NVR models, from entry level to professional models. For data safety, Hikvision Network Video Recorders provide RAID, N+1 hot spare and ANR functions, ensuring stable and reliable video recording. With Deep Learning units, Hikvision video recording becomes more powerful and more intelligent than ever.

2. ACCESS CONTROL PRODUCT

Complete, end-to-end solutions – from cameras to access controllers, from alarm relays to IP architecture, from door locks to DVRs, and more – have been meticulously engineered by the world's largest R&D Development team in the security industry. Hikvision's development facilities lead the industry in advancing the technology of every essential piece in an Access Control system. And we're just getting started.

Face Recognition Terminals

For quick and reliable ID verification – even under difficult lighting conditions – Hikvision does it all! Hikvision's deep-learning-empowered face recognition terminals set a new standard in access control. With face recognition technology, user authorizations are more secure and reliable, granting access only to verified personnel and eliminating possible fraudulent activities.

Fingerprint Terminals

These standalone terminals integrate the latest fingerprint algorithms while supporting multiple verification methods, including ID cards and PIN codes. Identification becomes faster and time attendance reports are more accurate.

Turnstiles

Hikvision Turnstiles integrate not only with face recognition terminals. They also offer users advanced access control functions and multiple combinations of authentication methods.

Controllers

Hikvision Access Controllers offer users various functions of access control. With its high adaptability, the device is suitable for a range of different application scenarios, and can be integrated with various other devices, such as card readers, locks or push buttons, to satisfy any user's unique requirements.

3. ITS (INTELLIGENT TRAFFIC SYSTEM) PRODUCT

Across the world, city authorities are beginning to look for smart technologies to make people's journeys faster and safer. One of these is Hikvision's portfolio of surveillance solutions that incorporate various cutting-edge technologies. From dedicated high-performance cameras for event capture to centralized video management platforms and comprehensive smart parking systems, our ITS solutions perfectly integrate all the devices and deliver scalable applications to cover various transportation scenarios.

Entrance & Exit Management

The whole system relies on ANPR technology, and it can help improve the efficiency of vehicles entering and exiting. Some related E&E applications, such as barrier gate control, park toll management, and passing vehicle recording, are performed with different, specific sub-solutions

Checkpoint Systems

As a critical part of Hikvision's intelligent traffic systems, checkpoints provide key data on traffic flow and violations. Whenever a vehicle passes through an ITS-equipped checkpoint, the camera captures an optimized image of the vehicle. And information such as license plate number, vehicle type, vehicle color, and radar-detected vehicle speed will be overlaid onto the captured image. Moreover, a checkpoint camera can detect unsafe driving behaviors such as driving with an unfastened seatbelt and phone use while driving, which will help regulate driving behaviors and improve public safety.

Intersection Violation Systems

Hikvision's Intersection Violation Systems capture unlawful and unsafe driving behaviors such as wrong-way driving, red-light running, and illegal lane change with cameras powered by GMOS sensors that render clear and colorful images even in low-light environments. They help regulate responsible driving, prevent traffic accidents, improve transportation efficiency, and facilitate law enforcement, allowing operators in traffic control centers to alert the authorities who can take action in real time to improve public safety and hold drivers accountable.
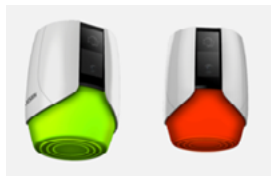

Parking Guidance

The Parking Guidance solution is equipped with deep learning algorithms and video monitoring technology to show real-time information on parking space availability.
A parked vehicle can easily be located on the map and a suitable route from the user's position to the car is recommended on the query terminal.

Traffic Flow System

Hikvision's Traffic Flow Systems monitor traffic densities and rates, process original data, and display traffic status. They control traffic light duration and guide drivers to alleviate congestion. These systems collect traffic information at crucial intersections and on highways to provide video-based vehicle detection services, including detection and statistics of traffic flow, average speeds, space and time headway, space and time occupation, vehicle type and queue length, and traffic status.

4. TRANSMISSION AND DISPLAY PRODUCTS

Hikvision's transmission and display product lines offer a wide range of equipment and accessories that do more than just create a complete security system – they transform it into a system that boosts high efficiency and optimal performance.

Network Switches
Push power and data further than ever before with Hikvision's new series of Power-over-Ethernet (PoE) Switches. The 3E Series PoE switches feature maximum 250-meter, ultra-long-distance transmission. With Hikvision's 3E Series PoE switches as the backbone, your network cameras can go as far as you need them to go – and perhaps even further than that!

Commercial Displays
Hikvision offer many types of display

| LCD Video Walls | LED Displays | Digital Signage | Interactive Tablets |

Our LCD video walls feature tiny bezel screen splicing, uniform color and brightness, and an industrial grade hardware design. Video wall controllers feature signal transmission without delay and loss, flexible control modes, and multiple signal and resolution. Hikvision's Indoor and outdoor LED displays come equipped with a variety of high-quality components and have been expertly designed to suit any environment. Today's interactive tablets are becoming more widely used for their multi-function capabilities. And Hikvision products lead the curve in these flexible solutions with ultra 4K resolution, accurate on-screen writing, build-in whiteboard software, and wireless screen mirroring. Our digital signage solutions provide personalized layout with multiple content blocks, free management software, and large-scale integrated management solution.

ABOUT

Huawei is a leading global information and communications technology (ICT) solutions provider. Driven by customer-centric innovation and open partnerships, Huawei has established an end-to-end ICT solutions portfolio that gives customers competitive advantages in telecom and enterprise networks, devices and cloud computing.

By leveraging Huawei strong R&D capabilities and comprehensive technical expertise, Huawei's strategy in the enterprise domain focuses on close cooperation and integration with partners to deliver a wide range of highly efficient customer-centric ICT solutions and services that are based on a deep understanding of customer needs. In line with Huawei's strategy, Huawei offer a broad portfolio of innovative ICT solutions that cater to global vertical industry and enterprise customers across government and public sector, finance, transportation, energy, large enterprises and Small and Midsize Enterprises (SMEs). Our portfolio covers enterprise networking, Unified Communications & Collaboration (UC&C), cloud computing & data center, enterprise wireless, network energy and infrastructure services.

* Huawei Switches

Huawei's extensive range of products and solutions
Huawei's wide range of products and solutions enables seamless digital transformation and rapid growth of virtualization, big data, and cloud services.

Our switches are tailored for every industry and have
Huawei's switches have helped many customers in the financial, Internet, retail, education, manufacturing, and public service sectors achieve success. With Gartner rating our solutions as both challenging and visionary, Huawei can take your business to the next level.

Huawei works with a wide range of partners around the world to deliver customized products and solutions that effectively meet your specific needs.

* Huawei High-Quality AirEngine WiFi 7 Network Solution

Wins the "Best Enterprise Wi-Fi Network 2023" Award from the Wireless Broadband Alliance.

Our network employs innovative technologies such as OFDMA & MU-MIMO joint scheduling, air interface traffic pre-aggregation and CoSR to reduce co-channel interference and improve user concurrency.
In addition, we use intelligent multimedia scheduling
to identify application types and dynamically allocate resources to ensure audio and video quality. Audio and video traffic is prioritized without impacting other services.

Seamless coverage with our industry-leading intelligent antenna coverage, even in motion. Our exclusive AI roaming algorithm directs endpoints to the access point with the best signal quality. This ensures uninterrupted connectivity. During roaming, terminal signal remains strong without any loss of bandwidth.

* iMaster NCE-Campus

iMaster NCE-Campus, Huawei's next-generation autonomous network management and control system for campus networks, incorporates management, analysis, control, and AI functions for full-lifecycle campus network automation. It also provides intelligent fault resolution by leveraging big data analysis and AI. Through automated and intelligent network management, iMaster NCE-Campus accelerates the cloud and digital transformation of organizations, helping them reduce both OPEX and O&M costs.

* CloudEngine S Series Switches

CloudEngine S Series switches are high-performance, high-performance core switches designed specifically for high-performance 10 Gbps campus networks. The series delivers an unmatched ultra-high-speed forwarding capability of 14.4 Tbps per slot, superior data switching, and massive endpoint access. Most notably, the CloudEngine S delivers 99.9999 percent reliability by being the first to implement Multichassis Link Aggregation Group (M-LAG) technology in campus networks. Other CloudEngine S16700 features include Virtual Extensible Local Area Network (VXLAN), free mobility, Quality of Service (QoS), Internet Packet Conservation Algorithm (iPCA), easy service provisioning, and fast troubleshooting. These features make the CloudEngine S16700 an excellent option for customers around the world who are looking to move into the era of 400 Gbps campus networking.

- **Super large capacity**

1 device for 100,000 terminals, 30% larger capacity, ready for evolution in the next 10 years

- **Superfast forwarding**

Backplane-free orthogonal architecture, 14.4 Tbit/s bandwidth per slot, 4x the industry average

- **Ultra-high reliability**

M-LAG for uninterrupted service upgrades,

Service Scale   : SME, Enterprise and Multinational Company

ABOUT

Providing location- and device-independent network connectivity that is secure and controls resource access for authorized users is a difficult challenge for enterprises and service providers. Breaches and threats continue to spiral out of control, and an increasing number of employees and users are connecting from outside the office as the "working from anywhere" revolution continues to grow.

· Mobile Iron Access

PRODUCT OVERVIEW

IT has become siloed. At the same time, IT professionals are bombarded with information. The lack of communication between tools and teams increases risk and cost, slows IT response, and leaves users and the business exposed. Meanwhile, security threats are skyrocketing.

UNIFIED ENDPOINT MANAGEMENT

Ivanti® Unified Endpoint Manager—or Ivanti UEM— increases user and IT productivity by helping IT administrators gather detailed device data, automate software and OS deployments, personalize workspace environments, and fix user issues quickly. Ivanti UEM is the only solution that personalizes the user workspace, while letting IT Analysts and Admins do their magic for all devices from one management experience—not through two, three, four or more consoles.

SECURITY MANAGEMENT

Ivanti® Security Suite prevents, detects, isolates, and remediates even the most sophisticated ransomware and other threats. Powerful, multi-layered protections automate discovery, inventory, and patch management, prevent malware from running or spreading, and enable remote control and remediation of infected systems. Flexible reporting and information visualization features improve compliance and help to pass more audits. Integration with systems management tools increases efficiency and control over your IT environment

SERVICE MANAGEMENT

Ivanti® Service Manager is a proven, robust IT service management solution that transforms service and support teams, service desks, and help desks from tactical service providers into strategic business enablers. Available in the cloud or on-premise, this fully multi-tenant solution improves day-to-day operations and increases the ability of IT teams to achieve world-class service management capabilities for IT and for other business departments.

XTRACTION

IT organizations everywhere struggle to measure and communicate metrics around the value they bring to the business. IT performance and productivity reporting alone doesn't reveal how IT supports business-critical initiatives. Xtraction lets IT and non-technical staff create and view interactive reports and dashboards, easily pulling from multiple data sources without coding. Gain a consolidated business view of all types of data instantly and visualize the state of IT environment for better-informed decisions.

IT ASSET MANAGEMENT

IT Asset Management (ITAM) is not just a matter of tracking assets. It's a matter of managing them throughout their lifespan to ensure they don't fall off the radar and begin to deteriorate. Discover, normalize, and reclaim your IT assets to avoid the financial risk of mismanaged hardware and software. Losing track of assets puts your organization at risk from non-compliance, software overspend, hardware downtime, or even security threats from theft or loss.

BENEFIT

1. Flexible launch options (standalone client, browser-based launch)
2. Supports Cloud Secure Solution
3. Pre-configuration options (Windows and Mac only)
4. Authentication Options

KEY FEATURES AND CAPABILITIES

1. DEVICE MANAGEMENT AND SECURITY

• **Security and Management**

Available on-premises and as a cloud service to secure and manage endpoints across multiple operating systems, including iOS, macOS, iPadOS, Android, and Windows.

• **Mobile Application Management (MAM)**

Secure business apps on contractor and employee devices with Ivanti AppStation without requiring device management.

• **Easy On-Boarding**

Leverage services such as Apple Business Management (ABM), Google Zero-Touch Enrollment and Windows AutoPilot for automated device enrollment.

• **Secure Email Gateway**

Ivanty Sentry, an in-line gateway that manages, encrypts, and secures traffic between the mobile endpoint and the back-end enterprise.

• **App Distribution and Configuration**

Apps@Work, an enterprise app storefront combined with the Apple Volume Purchase Program (VPP) facilitates the secure distribution of mobile apps. Additionally, features such as iOS Managed Apps and Android Enterprise make it easy to configure app-level settings and security policies.

2. DEVICE MANAGEMENT AND SECURITY

• **Secure Email and Personal Information Management (PIM) App Ivanti Email+ is a cross-platform**

Secure PIM application for iOS and Android. Security controls include government-grade encryption, certificate-based authentication, S/MIME, application-level encryption, and passcode enforcement.

• **Secure Web Browsing**

Web@Work enables secure web browsing by protecting both data-in-motion and data-at-rest. Custom bookmarks and secure tunneling ensure that users can access to business information quickly and securely.

• **Secure Content Collaboration**

Docs@Work enables users to securely access, create, edit, markup, and share content securely from repositories such as SharePoint, Box, Google Drive, and more.

• **Mobile App Containerization**

Deploy the AppConnect SDK or App Wrapper to provide an additional layer of security for your in-house mobile apps or choose from our ecosystem of AppConnect-integrated apps.

• **Derived Credentials**

Ivanty Sentry, an in-line gateway that manages, encrypts, and secures traffic between the mobile endpoint and the back-end enterprise.

• **App Distribution and Configuration**

Support two-factor authentication using Common Access Cards (CAC) and Personal Identity Verification (PIV).

3. SECURE CONNECTIVITY

• **Per App VPN**

Ivanti Tunnel is a multi-OS VPN solution that allows organizations to authorize specific mobile apps to access corporate resources behind the firewall without requiring any user interaction.

4. SCALE IT OPERATIONS

- **Helpdesk Tools**

With Help@Work, IT can remotely view and control user's screen, with the user's permission, to help troubleshoot and resolve issues efficiently.

- **Reporting**

Gain depth visibility and control over all managed devices with custom reports and automated remediation actions.

5. CONDITIONAL ACCESS

- **Trust Engine**

Combine multiple signals such as user, device, app, network, geographic region, and more to provide adaptive access control.

- **Passwordless User Authentication**

Passwordless multi-factor authentication using device-as-identity for a single cloud or on-premises application.

- **Device Ownership and Access Rules**

Improve security, increased efficiency, and user experience by enabling organizations to easily identify and monitor BYOD/COBO/COPE devices, customize authentication paths, and provide secure and seamless access to the corporate network.

Target Market	: Cross Industry
Solutions	: DevOps, Security-Risk & Governance, Hybrid IT Management, Predictive Analytics

ABOUT

At Opentext, we help you run and transform your business. Driven by customer-centric innovation, our software provides the critical tools you need to build, operate, secure, and analyze the enterprise. By design, these tools bridge the gap between existing and emerging technologies – which means you can innovate faster, with less risk, in the race to digital transformation.

PRODUCT OVERVIEW

DIGITAL TRANSFORMATION

Digitalization has changed everything. Organizations are unleashing the power of IT to supercharge innovation. But as you scramble to respond to the demands of digitally empowered customers, you also need to keep your business running smoothly. We offer comprehensive solutions that cover all your digital transformation needs.

Product Issuer	: Palo Alto
Issuer's Business Type	: Cybersecurity
Headquarter	: Tannery Way Santa Clara, CA
Product Website	: https://www.paloaltonetworks.com/
Target Market	: All Industry
Solutions	: Network Security, Cybersecurity, Cloud computing
Service Scale	: Public Company

ABOUT

Palo Alto Networks, Inc. is an American multinational cybersecurity company with headquarters in Santa Clara, California. Its core products are a platform that includes advanced firewalls and cloud-based offerings that extend those firewalls to cover other aspects of security.

PRODUCT OVERVIEW

Enterprise Product

Palo Alto Networks offers an enterprise cybersecurity platform which provides network security, cloud security, endpoint protection, and various cloud-delivered security services.

Next-generation firewalls, running PAN-OS, offered in multiple forms including:

- **PA series,**
  which includes small form-factor firewalls such as the PA-220 for small business and offices, to the PA-7000 series built for large enterprises and service providers.

- **VM series,**
  allowing the firewall to be run as a virtual machine to secure virtualized data centers and private clouds. It is also compatible with public cloud environments such as Amazon Web Services, Microsoft Azure, and Google Cloud.

- **GlobalProtect Cloud Service.**
  1. **Panorama,** a network security control center that allows customers to manage a fleet of firewalls at an enterprise scale from a single console.
  2. **Traps,** advanced endpoint protection, focuses on analyzing the behavior of programs to detect zero-day exploits. Threat intelligence is shared with and obtained from Wildfire.
  3. **Wildfire,** a cloud-based threat-analysis service which uses dynamic analysis, static analysis, machine learning, and bare-metal analysis to discover and prevent unknown threats.

Cloud Storage and Analysis Products

In 2019, Palo Alto Networks reorganized its SaaS offerings under the Cortex branding.

- **Cortex Data Lake -** Cortex data lake provides a cloud-delivered log aggregation service for Palo Alto Networks devices located in on-premise networks, directly from endpoints, or cloud-based products such as Prisma Access. This data lake information is then fed into the Hub apps that provide analysis, response, and other added services

- **Hub** - Hub is an open cloud-delivered ecosystem where customers can subscribe to security applications developed by 3rd-party developers or Palo Alto Networks. Some applications from Palo Alto Networks such as XDR (analytics) and AutoFocus (threat intelligence) are Cortex branded apps on Hub.

- **Cortex XDR** - XDR is the primary tool for data analysis from Palo Alto Networks that leverages modern threat detection and response capabilities on the centralized data collected in the Cortex Data Lake.

- **AutoFocus** - This service provides threat intelligence to enhance the analytic capabilities of the hub applications as an external source of relevant security information.

- **Cortex XSOAR** - Integrating its acquisition of Demisto into the Cortex cloud suite, XSOAR is the Security Orchestration and Response component responsible for automation and integration with other security and network systems for the automation of incident response and intelligence gathering processes.

- **Prisma Access** - Prisma Access is the Palo Alto Networks offering for moving the enterprise network monitoring and analysis functions into the cloud. It is the most comprehensive SASE solution of its kind, secures access, protects users and applications, and controls data for remote users and locations.

- **Prisma Cloud** - Prisma Cloud secures any cloud environment and all compute form factors used to build and run cloud native applications, including multi- and hybrid-clouds environments. It is Palo Alto Networks cloud native security solution that integrates with devops continuous integration and continuous development (CI/CD) processes for a more holistic control of the security life-cycle of cloud assets.
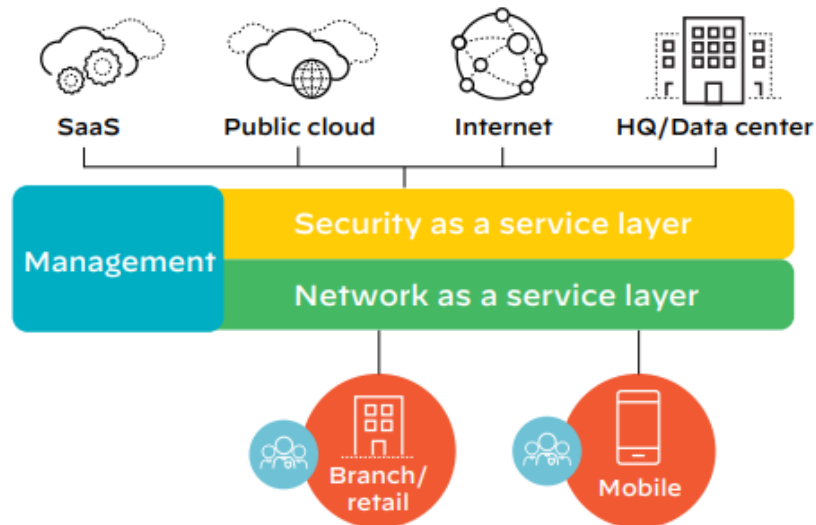

Prima SASE SD-WAN

Prisma SASE is the next-generation SD-WAN that powered by AI/MP to deliver flexible connectivity, with zero routing complexity, and featuring controller-based architecture that seamlessly builds, manages, and updates the network, while ensuring edge resiliency. It enables customers to reimagine their IT infrastructure by allowing them to deliver branch services at speed and scale.

Benefits of Prisma SASE:
- Simplified and fully automated connectivity to public cloud services.
- SD-WAN capabilities in the cloud for streamlined application access.
- Modernized IT operations with fully automated incident management.

- Instant SD-WAN visibility anywhere, improving branch uptime.

Why Prisma SASE?
- **Exceptional User Experience**
Prisma SD-WAN ensures application availability, based on real-time application performance SLAs and visibility, delivering 10x performance improvement while eliminating the challenges of packet-based networks.
- **Simplified Operations**
Reduces trouble tickets by up to 99% by simplifying tedious network functions, while helping customers expedite SASE migrations.
- **Improved Security Outcomes**
Natively applies best-in-class security to branches with ZTNA 2.0, helping to reduce breaches by 45%.

Cortex

Cortex Xpanse protects organizations by discovering risks on the internet that no one else can find. Recognized as the most trusted external attack surface solution by multiple organizations, including the DoD and four military branches, it continuously discovers and controls your unmanaged cloud assets, reducing mean time to inventory and staying ahead of attackers.

Benefits of Cortex Xpanse:
- **Deliver a Single Source of Truth**

Xpanse provides a complete and continuously updated inventory of assets across your organization and supply chain partners, providing a single source of truth.
- **Detection at the Speed of the Internet**

Attackers scan the entire internet for vulnerabilities in 45 minutes and within 15 minutes of CVE disclosures, SecOps moves faster with Xpanse.
- **Securing the Unknown**

Unknown assets make your mean time to effective response infinite and make attack surface reduction impossible.

How Cortex Xpanse Works?
- **Know Your Attack Surface**

Xpanse scans the entire IPV4 space up to several times a day to discover all your Internet-connected assets. It keeps track of changes that put you at risk. Identify security vulnerabilities of supply chain partners and third-party vendors, and locate relevant stakeholders for mitigation assistance.
- **Quickly Discover and Assign Risk for Remediation**

Mitigate risks faster by ensuring your asset inventory is up to date. Xpanse mitigates and traces back to the stakeholders to ensure remediation is done quickly.

- **Build an Integrated Attack Surface**

Discover all your unsanctioned and unmanaged cloud assets and services with Cortex Xpanse and secure your unmanaged cloud with Prisma Cloud. Automate the routing of exposure notifications and remediation of your unknown risks with Xpanse and XSOAR playbooks.
- **RDP is The Most Common Exposure and Attack Vector**

RDP accounted for 25% of total exposures, more than double the next most common exposure; Unit 42 research found that RDP was the initial attack vector in 50% of ransomware attacks.
- **Kickstart Your ASM Plan**

Our customer discovers 35% more internet-connected assets than they were tracked in inventory.
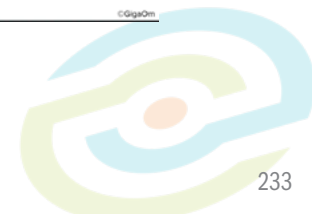

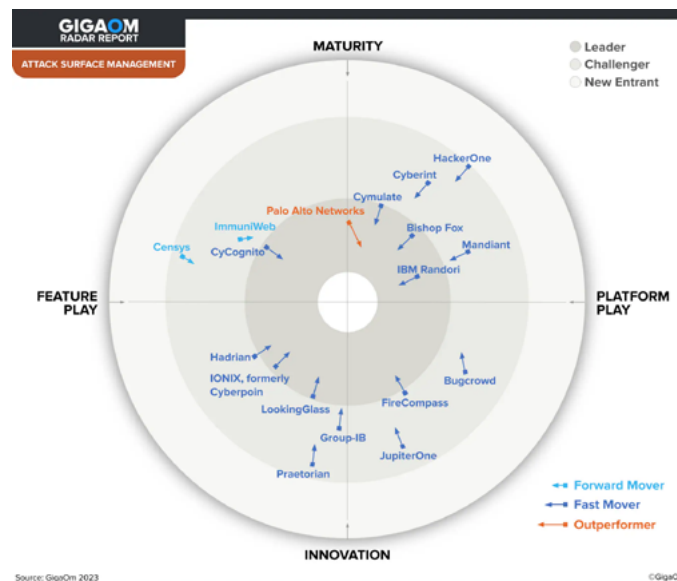

Product Issuer   : QUEST

Distributor in Indonesia   : PT. Virtus Technology Indonesia
Target Market   : Cross Industry
Solutions   : IT Asset Management, Data Protection, Database Management
Service Scale   : Enterprise

ABOUT

Quest is a global provider to 130,000 companies across 100 countries, including 95% of the Fortune 500 and 90% of the Global 1000. So, Quest has the experience to help you manage and protect your data, take control of your hybrid environments, keep track of all network-connected devices and govern every identity across the enterprise. With Quest, you and your organization can spend less time on IT administration and more time on business innovation.

PRODUCT OVERVIEW

CLOUD MANAGEMENT

Cloud access management
Cloud Access Manager (CAM) is a web-access management solution that offers secure and unified access to all your internal and cloud-based web applications while simultaneously enhancing security and IT efficiency.

Identity manager
Mitigate risk, secure data, meet uptime requirements and satisfy compliance by giving users access to data and applications they need. Identity and access management (IAM) can be driven by business needs, not IT capabilities. With Identity Manager you can unify security policies and satisfy governance needs— today and into the future.

Rapid recovery
Optimize your users' application experience and simplify backup and recovery. Rapid Recovery lets you protect anything — systems, apps and data — anywhere, whether it's physical, virtual or in the cloud.

DATA PROTECTION

NetVault
Protect data in complex, diverse IT environments — from one intuitive console — in this scalable backup and recovery solution. NetVault Backup supports multiple server and application platforms in both physical and virtual environments. That means you can ensure availability of business-critical applications, including Oracle, Exchange, MySQL, SQL Server, DB2 and SAP.

QoreStor
Break free of backup appliances, and accelerate backup performance, reduce storage requirements and costs, and replicate safer and faster to the cloud for data archiving, disaster recovery and business continuity. Quest® QoreStor™ is a software-defined secondary storage platform based on Quest's proven DR Appliance resilient deduplication and replication technologies.

Rapid recovery
Optimize your users' application experience and simplify backup and recovery. Rapid Recovery lets you protect anything — systems, apps and data — anywhere, whether it's physical, virtual or in the cloud.

vRanger
vRanger software provides high-speed backup and recovery of VMware®, Microsoft® Hyper-V®, and physical Windows Server® environments. It also provides high-speed replication for VMware.

DATABASE MANAGEMENT

Foglight for database

Ensure optimal database performance with comprehensive database, storage and virtualization monitoring and advanced workload analytics. Foglight for Databases enables you to consolidate and standardize database performance monitoring across your diverse multi-platform environments – even when you use native or third-party tools — to promote collaboration, improve service levels and reduce costs. Get a wealth of information at a fraction of the impact of conventional collection methods, which means you spend less time fighting database fires and more time improving the customer experience.

SharePlex

Achieve high availability, scalability and data integration through real-time database replication across on-premises, cloud or hybrid databases. Take advantage of emerging, open source or streaming databases with zero impact to mission-critical applications on Oracle or SQL Server databases.

TOAD

You're taking on more database responsibilities than ever before. Growing demands for shorter release cycles coupled with declining resources put critical databases and applications at risk. What if you could use a single toolset to modernize your Oracle database operations, build high quality applications faster, reduce risk and save money?

ENDPOINT SYSTEM MANAGEMENT

Kace

Streamline IT asset management, secure network-connected devices, and service end-user systems more efficiently. It's all possible with one of the industry's easiest and most comprehensive endpoint systems management solutions, available as a virtual appliance or hosted solution.

IDENTITY & ACCESS MANAGEMENT

Identity manager

Mitigate risk, secure data, meet uptime requirements and satisfy compliance by giving users access to data and applications they need. Identity and access management (IAM) can be driven by business needs, not IT capabilities. With Identity Manager you can unify security policies and satisfy governance needs— today and into the future.

Password manager

Password Manager provides a simple, secure, self-service solution that enables end users to reset forgotten passwords, and unlock their accounts. Now your organization can implement stronger password policies while reducing help desk workload. With Password Manager, there's no need to sacrifice security to reduce costs.

SafeGuard

The methods that hackers use to gain access to your systems and data are constantly evolving. Ultimately, hackers want access to your privileged accounts as they provide unlimited access to systems and data. In nearly every recent high-profile breach, lapses in privileged account management have been exploited. To limit the damage when a breach occurs, you need a secure, efficient and compliant way to provide access to privileged accounts.

MICROSOFT PLATFORM MANAGEMENT

Active administrator

Active Administrator is a complete and integrated Microsoft® Active Directory® (AD) management software solution that fills the administration gaps native tools leave behind. With Active Administrator, it's easier and faster than native tools to meet auditing requirements and security needs while also maintaining business continuity and increasing IT efficiency.

Change auditor

Change reporting and access logging for Active Directory (AD) and enterprise applications is cumbersome, time-consuming and, in some cases, impossible using native IT auditing tools. This often results in data breaches and insider threats to AD and other Microsoft platforms, and can go undetected without protections in place.

Product Issuer	: Radware
Issuer's Business Type	: Application and Network Security
Headquarter	: Israel
Product Website	: www.radware.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Cross Industry
Solutions	: Software & IS/Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Radware's product portfolio maximizes ROI from IT investments by ensuring fast, reliable and secure delivery of Web applications and network services that drive business productivity. The portfolio consists of comprehensive application Delivery Solutions, Attack Mitigation System (AMS), Real-Time Intelligence and Centralized Management & Reporting System. All products leverage Radware's On Demand Switch® with its "pay-as-you-grow" approach.

CERTIFICATION:
Certified Radware Alteon Specialist

PRODUCT OVERVIEW

Application Delivery and Load Balancing Products

An Application Delivery Network (ADN) is a suite of technologies that, when deployed together, provide application availability, security, visibility, and acceleration. While in computing, load balancing distributes workloads across multiple computing resources, such as computers, a computer cluster, network links, central processing units or disk drives. Load balancing aims to optimize resource use, maximize throughput, minimize response time, and avoid overload of any single resource. Here in Radware we provide:
- Alteon
- Fast View
- Link Proof
- App Wall
- App XML

Application and Network Security

Solutions and products from Radware are:
- Defense Pro
- Attack Mitigation Service
- Defense Pipe
- Defense Flow
- Emergency Response Team
- In Flight

Management and Monitoring

Solutions and products from Radware are:
- AP Solute Vision
- Application Performance Monitoring (APM)
- V Direct

Target Market	: Cross Industry
Solutions	: Software
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Red Hat is more than a software company. Red Hat enables the rapid adoption of open source technology in mission-critical enterprise environments by combining an exceptional development model with an easy-to-use business approach that gives customers the choice, adaptability, and ability to solve their business problems and turn IT into a strategic advantage.

Open technology build for change
Red Hat delivers robust open source solutions that simplify enterprise operations across platforms and environments, from the core data center to the network edge. Our transparent and accountable approach catalyzes open source communities to help you build adaptive, powerful IT infrastructure solutions.

Red Hat Certification:
Red Hat Certified Architect Infrastructure Level II, RHCS : Virtualization, Container & Kubernetes, Completed OpenShift Solutions, RHCE, RHCSA.

VTI Red Hat Value Added Services
Presales Consulting, Event, PoC, Local Demo Lab Access, Project Documents Support, Deployment & Add-on Local Maintenance.

SOLUTION SUMMARY

Red Hat Enterprise Linux
A reliable, proven foundation that adapts to new applications, virtualized environments, and a secure hybrid cloud.

Red Hat OpenShift
Enterprise open source Kubernetes container solutions deliver development platform

to build, modernize, and deploy applications at scale on your hybrid cloud infrastructure.

Red Hat Ansible Automation Platform
A platform for implementing enterprise-wide automation, no matter where you are on your automation journey.

Red Hat OpenStack Platform
A cloud computing platform that virtualizes, organizes, and manages resources from industry-standard hardware to ensure users get what they need, when they need it.

JBOSS Middleware
Red Hat® JBoss® Middleware is a family of lightweight, cloud-enabled, enterprise-ready products that help organizations innovate faster and smarter. List of solutions : accelerate, integrate, automate. And more enterprise open source solutions...

Target Market	: Cross Industry
Solutions	: Hardware, Software & IS/Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Riverbed delivers performance for the globally connected enterprise. With Riverbed®, enterprises can successfully and intelligently implement strategic Initiatives such as virtualization, consolidation, cloud computing, and disaster Recovery, without fear of compromising performance.

CERTIFICATION:
- Riverbed Certified Solutions Professional WAN Optimization (RCSP)

PRODUCT OVERVIEW

Application Performance Management

SteelCentral application monitoring tools is the only application performance management solution with integrated end-user experience monitoring, granular transaction capture, and Analytics™.

List of Products:
- SteelCentral AppResponse
- SteelCentral Web Analyzer
- SteelCentral AppInternals
- SteelCentral Portal

Network Performance Management

Riverbed Network Performance Management solutions are end-to-end visibility and analytics tools to deliver actionable information to resolve performance problem rapidly and proactively.

List of Products:
- SteelCentral AppResponse
- SteelCentral NetShark
- SteelCentral Packet Analyzer
- SteelCentral Packet Analyzer Personal Edition
- SteelCentral Portal
- SteelCentral Transaction Analyzer
- SteelCentral Flow Gateway
- SteelCentral NetSensor
- SteelCentral Network Planning and Configuration
  Management
- SteelCentral NetProfiler

- SteelCentral NetExpress
- Riverbed AirPcap
- SteelCentral UCExpert
- Riverbed Modeler
- SteelCentral NetAuditor
- SteelCentral NetCollector
- SteelCentral NetPlanner

Central Management & Control

SteelCentral is Riverbed tools that provide a central point of control for the infrastructure that optimizes and enhances application performance. List of Products:
- SteelCentral Controller for SteelHead Mobile
- SteelCentral Controller for SteelHead

SteelHead for Optimization, Visibility and Control

Riverbed SteelHead is the industry's #1 optimization solution for accelerated delivery of all applications across the hybrid enterprise.

List of Products:
- SteelHead CX
- SteelHead DX
- SteelHead EX
- SteelHead SaaS
- SteelHead Mobile
- SteelHead Interceptor

Product Issuer	: RUBRIK
Issuer's Business Type	: Cloud
Headquarter	: USA
Product Website	: www.rubrik.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Cross Industry
Solutions	: Cloud Data Management
Service Scale	: Enterprise

ABOUT

Rubrik is the market leader in cloud data management, the world's first anytime, anywhere data orchestration platform for hybrid cloud enterprises. Rubrik combines future-proof architecture with consumer-grade simplicity to pioneer a new approach to an old problem. The company is valued at more than $1B and is known for its rapid growth and transparent company culture. Rubrik - Zero Trust Data Security™, our mission is to secure the world's data. Without data, business comes to a halt. Fortunately, businesses can access more data in more ways than ever before. Unfortunately, this access has made data much more difficult to defend. Despite heavy investments in cybersecurity, bad actors still find ways to access data. This is where it comes in.

PRODUCT OVERVIEW

Rubrik Cloud Data Management integrates backup, instant recovery, replication, search, analytics, archiving, compliance, and copy data management into a scale-out fabric. Enterprises use Rubrik to easily and securely manage all data, whether it's physical or virtualized, across all locations - on-premises, at the edge, and in the cloud. Enterprises achieve unprecedented data mobility and accessibility, eliminate management complexity, and align technology.

Rubrik cloud data management is designed to be:

- Software-Defined: We distill physically disparate hardware and software components underlying the multi-tiered, legacy backup and recovery architecture into one software. Rich data services are embedded into this software fabric so that managed data can be repurposed for use cases beyond protection.

- Simple: We solve for ease of use by infusing consumer-grade usability into enterprise software, from rapid installation to painless management.

- Scale-out: We adopt the same web-scale technologies used by Google, Facebook, and Amazon, allowing our users to easily handle rapidly increasing volumes of information with a linear architecture. Users avoid painful forklift upgrades and continue to easily manage Rubrik as a single system.

USER CASES

Backup and instant recovery
Rubrik introduces a radically simple backup solution that delivers near-zero RTOs without additional storage provisioning. Quickly test upgrades or recover from Ransomware without data loss. Stop wasting time managing backup jobs, and start automating backup policies. Search for VMs, physical databases and applications, or less just as you search on the web, with suggested search results as you type. Backup and recovery cloud-native applications by deploying Rubrik as a software instance in public cloud.

Data archival and compliance
Rubrik offers easy-to-manage data archival that remains instantly accessible. Automate long-term data retention by setting policies in the same policy engine as your backup and replication schedules. Instantly access your archived data by searching a global index that catalogues all data, even if it's stored in the cloud. Automate SLA compliance reporting and get noticed early on capacity utilization and growth. Archive cloud-native data to a public cloud provider's blob storage service.

Replication and DR
Rubrik provides asynchronous, deduplicated replication for site-to-site recovery. One policy engine allows you to setup backup, replication, and archival schedules on-site or in the cloud. Accumulate more recovery points for all your applications. Deliver point-in-time recoveries for database applications. Achieve near-zero RTOs from any VM replica without rehydration or additional storage provisioning. Deliver cloud-to-cloud
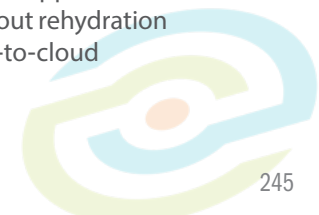

replication as well as bi-directional replication from cloud to an on-premises Rubrik cluster.

Remote and branch offices

Rubrik Edge is a software appliance that extends data protection and management to remote and branch offices. Deploy Edge at remote locations to backup locally, replicate to a central data center, and archive to the cloud with an easy-to-use interface. Use the same Rubrik interface to gain visibility into VMs, physical databases and applications, snapshots, SLA policies, and more.

Copy data management

Rubrik can be used to accelerate application test and development by providing multiple copies to developers from just one "golden image." Rubrik native linked- cloning capabilities to allow any number of mounts to be created with no storage penalty. Users can provision as many copies to developers as needed within a sandbox environment. With Rubrik, enterprises can stand up, test, and tear down environments in minutes for databases and applications.

ENVIRONMENT SUPPORT

Managed environments

- Virtualization: VMware vSphere 5.1, 5.5, 6.0, 6.5 (VMs can run all operating systems and applications supported by VMware), Microsoft Hyper-V 2008R2+ (via connectors), 2016+ (native support using WMI and RCT), Nutanix AHV 5.1, 5.5, 5.6, vCloud Director
- Storage Protocols: NFS, iSCSI, and internal/external local storage devices supported by AHV, ESXi, and Hyper-V
- Cloud Instances: AWS Elastic Cloud Compute (EC2) instances
- Network Attached Storage (NAS): SMB and NFS supported
- Pure Storage: All Purity Flash Array OE running 4.0 or higher

Archival locations

- Public Cloud: Amazon Web Services S3, S3-IA, S3-RRS and Glacier; Microsoft Azure Blob Storage LRS, ZRS and GRS; Google Cloud Platform Nearline, Coldline, Multi-Regional and Regional. Includes support for Government Cloud Options in AWS and Azure.
- Private Cloud (S3 Object Store): Basho Riak, Cleversafe, Cloudian, EMC ECS, Hitachi Content Platform, IIJ GIO, Red Hat Ceph, Scality
- NFS: Any NFS v3 Compliant Target
- Tape: All Major Tape Vendors

Os & applications

- Physical/Virtualized Linux RHEL 5/6/7, CentOS 5/6/7, Oracle Linux 5/6/7, Debian Linux 8+, SUSE 11/12, Ubuntu 14.04/16.04
- Physical/Virtualized Windows 2008 R2, Windows 2012 and 2012 R2, Windows 2016
- Physical/Virtualized Microsoft SQL Server 2008/2008 R2/2012/2014/2016 running on Windows 2008 R2/2012/2012 R2/2016
- Physical/Virtualized IBM AIX 7.1, 7.2
- Oracle Database 12c R1(12.1.0), 11g R2 (11.2.0), and 10g R2 – ASM & RAC Supported
- Application-aware backup and recovery is available through Microsoft VSS integration for Microsoft Windows 2012/2008 R2, Microsoft Exchange Server 2010/2013, Microsoft SharePoint 2013, Microsoft SQL Server 2008/2008 R2/2012/2014, Microsoft Active Directory in Windows Server 2012/2008 R2

RUBRIK SECURITY CLOUD

Be unstoppable against cyberattacks and operational failures. Protect your data, monitor data risk, and recover data and applications to keep your business moving forward with the Rubrik Security Cloud.

THE STATE OF DATA SECURITY

Cyber attacks are becoming more frequent and more sophisticated. Despite major investments in infrastructure security tools, bad actors are finding their way to data. This is why it is becoming more common to target backup data.

- 99% of IT and security leaders will have experienced at least one attack in 2022.
- 93% of external facing organizations have reported reported that malicious actors have attempted to backup data during a cyberattack.
- 73% of attempted backups were at least partially successful.

It's time to take a new approach-one that combines the investments you've made in securing infrastructure with securing data. Security for your data, wherever it is. Protect data across the enterprise, cloud, and SaaS applications.

ZERO TRUST BY DESIGN

Rubrik Security Cloud is designed with zero trust to prevent data-level threats. Our use of native immutability, secure protocols, logical air gap, encryption, role-based access controls, multi-factor authentication, and native services ensure the integrity and availability of your data.

GLOBAL POLICY DRIVEN AUTOMATION

Ensure data availability, maintain policy compliance and orchestrate recovery workflows with Rubrik's Global Policy Driven Automation. Rubrik enforces data security policies with automated discovery and policy-driven workflows, while ensuring fast and predictable recoveries with an understanding of application relationships.

DATA RISK ASSESSMENT & ANOMALY DETECTION

Understand your data exposure, investigate threats faster, and prevent malware reinfection with Rubrik's Data Risk Assessment & Anomaly Detection.

virtus
a member of CTI Group

WHY RUBRIK?

- **Data protection**

Protect your data from insider threats with air-gapped, immutable, and access-controlled backups.
- **Enterprise Data Protection** - Keep your enterprise data safe from attacks or disasters.
- **Cloud Data Protection** - Protect your cloud data from compromise.
- **SaaS Data Protection** - Secure your SaaS application data with automated protection
- **Unstructured Data Protection** - Protect, monitor, and quickly recover from petabyte-scale cyberattacks.
- **Mass Recovery** - Restore business operations quickly by recovering apps, files, or objects at scale.

- **Data Threat Analytics**

Continuously monitor for data threats, including ransomware, data destruction, and indicators of compromise.
- **Anomaly Detection** - Determine the scope of cyberattacks using Machine Learning to detect deletion, modification, and encryption.
- **Threat Monitoring** - Detect threats early by automatically identifying indicators of compromise within backups using a current feed of threat intelligence.
- **Threat Hunting** - Prevent malware reinfection by analyzing the time-series history of data for indicators of compromise to identify the initial point, scope, and time of infection.

- **Data Security Posture**

Identify and monitor sensitive data exposure and use intelligent risk insights to maximize data security posture.
- **User Access** - Reduce the risk of data exposure by identifying

and restricting who has access to sensitive data.
- **Sensitive Data Monitoring** - Reduce sensitive data exposure and manage exfiltration risk by understanding what types of sensitive data you have and where it is stored.
- **Data Security Command Center** - Identify security gaps, quantify data risk, and provide actionable recommendations to improve data security posture.

- **Cyber Recovery**

Improve cyber readiness by easily testing and orchestrating recovery workflows.
- **Threat Containment** - Ensure safe and fast recovery by quarantining malware-infected data.
- **Cyber Recovery Simulation** - Improve cyber readiness and incident response by easily creating, testing, and validating cyber recovery workflows.

Product Issuer	: Ruckus
Issuer's Business Type	: Wi-Fi Technology
Headquarter	: USA
Product Website	: www.ruckusnetworks.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Cross Industry
Solutions	: Hardware, Software & IS/Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

RUCKUS Networks builds and delivers purpose-built networks that perform in the harsh, unique environments we serve. By leveraging network assurance and enterprise-wide automation powered by AI and machine learning (ML), we enable our customers to deliver exceptional experiences to every employee, guest, customer, student and resident who relies on these networks to connect to their digital lives. RUCKUS Wi-Fi products and AI/ML-driven Wi-Fi security outperformed the competition in an independently validated test.

CERTIFICATION:
Ruckus Wireless Solution Engineer (WiSE)

PRODUCT OVERVIEW

1. Software & SaaS
- Secure Network Access: Cloudpath
- Network Reporting: SCI
- Assurance & Intelligence: RUCKUS Analytics
- Local Analytics: SPoT

2. Control & Management
- Physical Appliance: SmartZone, ZoneDirector
- Virtual Appliance: SmartZone
- Cloud-managed: RUCKUS Cloud, RUCKUS CBRS
- Controller-less: RUCKUS Unleashed
- IoT: RUCKUS IoT Controller

3. Switches
- Access: ICX 7150, ICX 7250, ICX 7450
- Aggregation: ICX 7550, ICX 7650,
- Core: ICX 7750, ICX 7850

4. Access Points
- Outdoor: T, P series
- Indoor: R series
- Specialty: H, C, M, E series
- LTE: Q series

RUCKUS ADVANTAGES

✔ **Performance**
Consistently deliver the required network performance to each end user, no matter how demanding the environment.

✔ **Simplicity**
Provide a single platform to manage multiple access networks with zero-touch provisioning and simple, intuitive management.

✔ **Adaptability**
Our interchangeable deployment options provide easy capacity expansion for future flexibility and investment protection.

✔ **Innovation**
Delivers patented RF core technologies, AI-driven cloud RRM, AI-driven network assurance and more.

✔ **Interoperability**
Open APIs enable RUCKUS technologies to integrate with third-party and homegrown apps.

Product Issuer	: SolarWinds
Issuer's Business Type	: IT Management Software
Headquarter	: USA
Product Website	: www.solarwinds.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Cross Industry
Solutions	: Hardware, Software, and IS/Application
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

SolarWinds (NYSE: SWI) provides powerful and affordable IT management software to customers worldwide from Fortune 500 enterprises to small businesses. In all of our market areas, our approach is consistent. We focus exclusively on IT Pros and strive to eliminate the complexity that they have been forced to accept from traditional enterprise software vendors. SolarWinds delivers on this commitment with unexpected simplicity through products that are easy to find, buy, use and maintain while providing the power to address any IT management problem on any scale. Our solutions are rooted in our deep connection to our user base, which interacts in our online community, thwack, to solve problems, share technology and best practices, and directly participate in our product development process.

PRODUCT OVERVIEW

I. NETWORK

Featured Products:

Network Performance Monitor
Powerful Network Fault & Availability Management.
• Simplifies detection, diagnosis, & resolution of network issues
  – before outages occur
• Tracks response time, availability, & uptime of routers, switches,
  & other SNMP-enabled devices
• Shows performance statistics in real time via dynamic, drill-
  able network maps
• Includes out-of-the-box dashboards, alerts, reports, & expert
  guidance on what to monitor & how
• Automatically discovers SNMP-enabled network devices &
  typically deploys in less than an hour

IP Address Manager
Centralized DHCP, DNS, and IP Address Management
• Streamlines IP infrastructure administration through centralized
  visibility & control
• Automates IP address management tasks to save time, reduce
  errors & increase efficiency
• Consolidates multi-vendor DHCP & DNS management for
  enhanced reliability & performance
• Simplifies troubleshooting via unified dashboard, real-time
  views & historical tracking
• Prevents network issues with automatic scans, IP conflict
  detection & proactive alerts

More Network Management Products:

Net Flow Traffic Analyzer
Real Time Network Utilization & Bandwidth Monitoring

VoIP & Network Quality Manager
Proactive VoIP & WAN Performance Monitoring & Troubleshooting

Network Configuration Manager
Automated Network Configuration & Compliance Management

Firewall Security Manager
Multi-vendor Firewall Security & Change Management

User Device Tracker
Device Tracking & Switch Port Management

Network Topology Mapper
Network Discovery & Mapping for Microsoft Visio®

Engineer's Toolset
Over 50 Must-Have Network Tools

Kiwi® Syslog Server
Comply With Regulations for Log Retention, Send Simple Alerts
and Forward Messages

II. APPLICATION & SERVER

Featured Products:

Server & Application Monitor

Server Monitor Made Simple - Deploy, Monitor & Resolve
• Quickly downloads and deploys in less than an hour, is simple to use, and easy on your budget
• Multi-vendor hardware monitoring for HP® ProLiant®, IBM System x®, DellTM PowerEdgeTM, blade chassis, and VMware® ESX/ESXi hosts
• Application monitoring and user experience for virtually any application—Microsoft® Exchange, Active Directory®, IIS, any ODBC database, and more
• Eliminate the guess work with expert guidance on what to monitor, why to monitor it, and optimal thresholds
• Resolve problems quickly with built-in server management to start/stop services, kill processes, and restart servers

Dame Ware Remote Support

Remote Windows Administration and Desktop Remote Control
• Manage and Administer Windows machines on your network from the comfort of your desk
• Desktop remote control of Windows, Linux and OS X computers
• Remotely control Windows computers from your iPhone, iPad or Android device
• Export detailed information from remote windows computers to create inventory reports
• Manage Active Directory®, users and groups, files and directories, printers, and more
• Start, stop and restart Windows services without having to use remote control

More Application & Server Management Products:

Virtualization Manager
Comprehensive Multi-vendor Virtualization Management—From VM to Storage

Storage Manager, Powered by Profiler
Multi-Vendor Storage Performance & Capacity Management

Patch Manager
Automated Patching of Servers & 3rd-Party Apps

Web Performance Monitor
Easy-To-Use Website & Web Application Monitoring

Web Help Desk TM
Easy-to-use Web-based IT Help Desk, Asset Management, Change Management & Knowledge Base for Windows®, Mac OS X®, and Linux® Computers and VMs

Dame Ware Mini Remote Control
Remote Control for Windows®, Mac OS X®, and Linux® Computers

Serv-U® Managed File Transfer Server
Transfer Securely Using Web Browsers, FTP Clients and Mobile Devices

Mobile Admin TM
Agent-less IT management & monitoring from any mobile device

Alert Central
Free Multi-Vendor Alert Management, Escalation, & On-Call Scheduling

III. SECURITY

Featured Products:

Log & Event Manager
Security Information & Event Management (SIEM) made Simple & Affordable
• Automatic log collection, analysis, alerting, and reporting
• Real-time event correlation for immediate threat detection
• Built-in Active Responses for automated and rapid remediation
• Advanced search capabilities for fast and easy forensic analysis
• Pre-packaged templates for simplified compliance reporting
• All-in-one virtual appliance for quick and simple deployment

SOPHOS

PRODUCT OVERVIEW

Sophos is a developer and vendor of computer security software and hardware, providing communication endpoint, encryption, network security, email security and mobile security as well as Unified Threat Management products.

Their products including:

Network Protection
- UTM & Next-Gen Firewall
- Secure Wi-Fi
- Secure Web Gateway
- Secure Email Gateway

End User Protection
- End User Protection Bundles
- End Point Antivirus
- Sophos Cloud
- Mobile Control
- Safe Guard Encryption

Server Protection
- Virtualization Security
- Server Security
- Share Point Security
- Network Storage Antivirus
- Pure Message

Product Issuer	: ThriveDX
Issuer's Business Type	: Education and Training Services (B2B)
Headquarter	: Coral Gables, United States
Product Website	: https://thrivedx.com/
Target Market	: All Industry
Services	: Security Awareness Training, Application Security Training, Advanced Training
Service Scale	: SMEs, Enterprises & Multinational Company

ABOUT

Provider of cybersecurity training services intended to spread knowledge and saturate the market with competent specialists. The company's services offer advanced, workforce and professional development programs in digital technology, enabling students to learn as per their personal interests, abilities, and professional level.

PRODUCT OVERVIEW

1. Security Awareness Training

Test Employees With Real-World Scenarios: Simulate the full cyber threat landscape using customizable, easy-to-edit templates for any type of phishing attack.

- Spear phishing simulations
- SMS & portable media attacks
- File attacks (PDF, Java, Macro, etc).
- Website cloner
- And more..

Train Employees With Tailored Interactive Content: Hundreds of interactive, web-based training modules help you elevate your company's security awareness culture.

Monitor Success With Real-Time Reporting: Our real-time reporting dashboard and automatic monthly reports allow you to measure employee progress, while maintaining full control and visibility of the program.

2. Application Security Training

Application security training with effective training, based on relevant real-world content, delivered in the methodologies that developers like, on the tools they use, with the skills they need to learn.

3. Advanced Training

Keep Your Workforce Technology-Strong and Driven : Keep employees' digital skills sharp with advanced training and short courses that address real-world technical and cybersecurity topics.

Specialty and uniqueness:
Our phishing and awareness solution is fully customizable and offers relevant and realistic training, real-time insights, and full data privacy with multiple quick deployment options.

Product Issuer	: Trend Micro
Issuer's Business Type	: IT Security Software
Headquarter	: Japan
Product Website	: www.trendmicro.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: All industry
Solutions	: Cross Solution, Hybrid Cloud Security, User Protection, Network Security
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

Trend Micro, a global leader in cybersecurity, enables secure global digital information exchange. With years of experience, extensive global threat research, and continuous innovation, our comprehensive cybersecurity platform protects more than 500,000 organizations and more than 250 million individuals across networks, devices, endpoints, and the cloud.

As a top enterprise cybersecurity company, our platform provides essential visibility to improve detection and response time, and utilizes a robust range of advanced threat defense techniques optimized for cloud environments such as AWS, Microsoft, and Google. With a team of more than 7,500 employees, including seasoned executives and world-renowned security experts in 65 countries, Trend Micro has a strong commitment to security and is dedicated to creating a safer world.

PRODUCT OVERVIEW

I. User Protection

Trend MicroTM Smart Protection Complete
Trend MicroTM Smart Protection Complete is a software suite that delivers the best protection at multiple layers, supports flexible on- premise, cloud and hybrid deployment models, and lets you manage users across multiple threat vectors from a single pane of glass with a complete view of your security. Includes endpoint security, mobile security, secure web gateway, email and collaboration security, integrated data loss prevention, and centralized management.

Trend MicroTM Smart Protection for Endpoints
Trend MicroTM Smart Protection for Endpoints is a software suite that protects virtual and physical desktops with multiple layers of threat and data security across devices and applications. Features cloud flexibility and user-centric visibility supported by a full range of endpoint security, integrated data loss prevention, and centralized management.

II. Cloud and Data Center Security

Trend Micro Deep Security
Trend MicroTM Deep SecurityTM platform, available as software or as a service, provides centralized protection for physical, virtual, and cloud servers as well as virtual desktops. Tightly integrated modules expand its capabilities to include anti-malware, integrity monitoring, intrusion prevention for virtual patching, web application control, and firewall and log inspection. And it can unify security management, enforcing the same corporate policies across private and public clouds or different policies for self-service, multi-tenant clouds.

Trend Micro Deep Security as a Service
Trend Micro Deep Security as a Service is a cloud-hosted solution designed specifically for customers using Amazon Web Services (AWS), Microsoft Azure, and VMware vCloud Air.

Trend Micro Server Protect
Trend MicroTM ServerProtectTM malware protection simplifies and automates security operations on physical servers for leading storage systems as well as for Linux, Microsoft Windows, and Novell NetWare.

Trend Micro SSL
Trend MicroTM SSL provides unlimited SSL certificates with a management console to increase the cost-effectiveness of protecting every web page.

III. Custom Defense Against Targeted Attacks

Trend Micro Deep Discovery

Trend MicroTM Deep DiscoveryTM is an advanced threat protection platform that enables you to detect, analyze, and respond to stealthy, targeted attacks. It uses specialized detection engines, custom sandboxing and global threat intelligence from the Trend Micro Smart Protection Network to defend against attacks that are invisible to standard security products. Deep Discovery uniquely detects and identifies evasive threats in real time, then provides the in-depth analysis and relevant actionable intelligence that will protect your organization from attack.

Deep Discovery Inspector

Deep Discovery Inspector delivers 360-degree monitoring for network-wide detection of malware and attacker activities.

Deep Discovery Analyzer

Deep Discovery Analyzer enhances existing detection capabilities with advanced heuristics, sandboxing, and intelligence - sharing to discover targeted attacks and advanced threats.

Deep Discovery Email Inspector

Deep Discovery Email Inspector uses a variety of advanced techniques to detect and block spear-phishing and other targeted email attacks.

Deep Discovery Endpoint Sensor

Deep Discovery Endpoint Sensor provides detailed endpoint activity tracking that enables rapid attack validation and analysis.

IV. Centralized Management and Reporting

Trend Micro Control Manager

Trend MicroTM Control ManagerTM software provides a central platform to manage the configuration, policies, and operation of Trend Micro enterprise security products.

Trend Micro Remote Manager

Trend MicroTM Remote Manager is a multi-tenant, cloud-based management console that makes it easy for Managed Service Providers to oversee and manage Worry-Free Security and Hosted Email Security products across multiple customer deployments.

PRODUCT OVERVIEW

App Platform

Modernize apps faster with a multi-cloud Kubernetes platform to help you build and run all apps consistently across clouds. Build, run, secure, and manage all of your apps across any cloud with application modernization solutions and guidance from VMware.
- Tanzu Kubernetes Grid
- Tanzu Application Platform
- Tanzu Data Services
- Tanzu Mission Control
- Tanzu Observability
- Tanzu Service Mesh

Cloud & Edge Infrastructure

Accelerate cloud transformation with an enterprise infrastructure, multi-cloud operations and modern app platform across the edge and any cloud. Run enterprise apps at scale with a consistent cloud infrastructure across public clouds, data centers and edge environments.
- vSphere
- vCenter Server
- VSAN
- vRealize Log Insight
- vRealize Operations
- vRealize Automation
- vRealize Network Insight
- VMware Cloud Foundation
- VMware Cloud Disaster Recovery
- VMware Cloud on AWS

- Azure Vmware Solution
- Alibaba Cloud VMware Service
- CloudHealth
- CloudHealth Secure State
- Telco Cloud Infrastructure
- Telco Cloud Automation
- Telco Cloud Platform
- Telco Edge

Anywhere Workspace

Empower your employees to be productive from anywhere, with secure, frictionless access to enterprise apps from any device. Enable any employee to work from anywhere, anytime with seamless employee experiences.
- Workspace ONE
- Workspace ONE Access
- Workspace ONE Assist
- Workspace ONE Unified Endpoint Management
- Workspace ONE Intelligence
- Horizon
- Horizon Cloud
- Workstation Pro
- Fusion for Mac

Security & Networking

With connected security that delivers full visibility and frictionless operations, your apps and data are more secure with VMware, in any environment. Deliver security and networking as a built-in distributed service across users, apps, devices, and workloads in any cloud.
- Carbon Black Cloud
- Carbon Black Container
- Carbon Black Endpoint
- Carbon Black Workload
- NSX-T Data Center
- NSX Firewall
- NSX Distributed IDS/IPS
- NSX Network Detection and Response
- NSX Managed Detection and Response
- NSX Intelligence
- NSX Advanced Load Balancer
- VMware SD-WAN
- Secure Access Service Edge (SASE)

The VMware Cloud Provider Program (VCPP) is comprised of VMware software-as-a-service offerings and our global ecosystem of VMware Service Provider Partners. It is the ideal solution for all companies that offer hosted services to third parties, including infrastructure as a service (IaaS) providers, cloud service providers (CSPs), application service providers (ASPs), Internet service providers (ISPs) and platform as a service (PaaS) providers.

As the largest network of validated cloud services based on VMware technology, VCPP enables partners to consume VMware products on a flexible monthly subscription model. VMware Service Provider Partners can offer a wide range of VMware-based cloud services on a geographical basis, allowing customers to seamlessly extend their data center into the cloud using familiar VMware products and tools.

ABOUT

xFusion Digital Technologies Co., Ltd. (hereinafter referred to as "xFusion") provides global leading digital infrastructure and services. xFusion continuously creates value for customers and partners and accelerates the digital transformation of the industry. xFusion has 11 research institutes, 7 regional offices, and 5 major supply centers in total around the world (some still under preparation). Currently, xFusion is serving customers in 130 countries and regions, including 211 Fortune Global 500 companies and covering telecoms, finance, Internet, governments, and other industries.

Offers / List of Products

Servers:
FusionServer V7
Rack Servers
High-Density Servers
GPU Servers
Rack-Scale Servers
Intelligent Management Software Platform

HCI Solution:
FusionOne for VMware Solution
FusionOne for Microsoft HCI Solution

HPC Solution:
FusionOne HPC Solution

PRODUCT OVERVIEW

FusionServer V7:
Superior Computing Power in All Scenarios, with Solid Reliability and Optimal Energy Efficiency

Rack Servers
FusionServer series rack servers are the ideal choice for cloud computing, virtualization, HPC, big data, data warehouses, and HANA scenarios

High-Density Servers
FusionServer series high-density servers are ideal for service applications, such as cloud computing, web-based applications, and HPC

GPU Servers
FusionServer GPU servers are designed for data centers and are applicable to AI, HPC, database, and video analysis scenarios

FusionPoD Rack-Scale Server
*   The FusionPoD 720 liquid-cooled server (FusionPoD 720) adopts a computing cluster server cabinet that features high density, powerful performance, high energy efficiency, robust reliability, and integrated delivery.
*   It is applicable to cloud computing, virtualization, big data, high-performance computing (HPC), and other applications, and can be widely deployed in enterprise business, Internet data centers (IDCs), telecom, Internet, and other data centers.

FusionDirector Centralized Infrastructure Management Platform
Purpose-designed to manage servers throughout their entire lifecycles, FusionDirector provides five intelligent management functions covering intelligent maintenance, upgrade, discovery, energy saving, and deployment, improving O&M efficiency by 30%. Its real-time visual interface provides customers with the ultimate experience.

FusionOne for VMware Solution
Integrating the VMware hyperconverged infrastructure software and xFusion-developed management software into FusionServer servers, this solution provides performance-leading, reliable, and stable hyperconverged infrastructure with simple operation and maintenance, fitting into various application scenarios, such as general-purpose computing, desktop virtualization and branch offices.

FusionOne for Microsoft HCI Solution
From hardware infrastructure to HCI solutions, xFusion join hands with Microsoft and integrate the technical advantages of the two companies to provide customers with converged, efficient, extremely reliable, and scalable solution products, supporting business development of enterprises at different development stages to easily meet the challenges of digital transformation. It is a reliable choice for enterprises in digital transformation.

FusionOne HPC Solution
xFusion FusionOne HPC solution provides customers with an integrated HPC platform. Through self-developed OneMind intelligent engine where software and hardware are deeply integrated, it provides customers with intelligent HPC solutions that are highly efficient in operation, safe and reliable, simple in O&M, and green energy-saving, fitting into HPC business scenarios in industries such as education and research, manufacturing simulation.

Product Issuer	: YugabyteDB
Issuer's Business Type	: Database Technology
Headquarter	: Sunnyvale, California
Product Website	: www.yugabyte.com
Target Market	: Cross Industry
Solutions	: Distributed Database, Database Platform, Database-as-a-service
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

YugabyteDB is a high-performance distributed SQL database for powering global, internet-scale applications. Built using a unique combination of high-performance document store, per-shard distributed consensus replication and multi-shard ACID transactions (inspired by Google Spanner), YugabyteDB serves both scale-out RDBMS and internet-scale OLTP workloads with low query latency, extreme resilience against failures and global data distribution. As a cloud native database, it can be deployed across public and private clouds as well as in Kubernetes environments with ease.
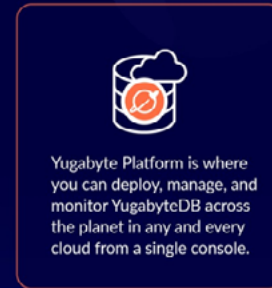

PRODUCT OVERVIEW

YugabyteDB

YugabyteDB is an open source distributed SQL database that uniquely combines enterprise-grade RDBMS capabilities with the horizontal scalability and resilience of cloud native architectures. For enterprises that want to use yugabyteDB in cloud native environments at scale

Yugabyte Platform

Gives you the simplicity and support to deliver a private database-as-a-service (DBaaS) at scale. Use Yugabyte Platform to deploy YugabyteDB across any cloud anywhere in the world with a few clicks, simplify day 2 operations through automation, and get the services needed to realize business outcomes with the database.

Yugabyte Cloud

a fully managed cloud DBaaS for YugabyteDB available on your choice of AWS, Google Cloud, and Azure Yugabyte Cloud delivers continuous availability,scalability,and support based on pwerful automation and operational best practice, allowing you to focus on building awesome applicationsProduct's speciality

yugabyteDB

YugabyteDB is the open source, high-performance, distributed SQL database for global, internet-scale apps.

Yugabyte Platform is where you can deploy, manage, and monitor YugabyteDB across the planet in any and every cloud from a single console.

yugabyte cloud

Yugabyte Cloud, a fully-managed YugabyteDB-as-a-Service running on Amazon Web Services or Google Cloud Platform. Currently in BETA.

Specialty & Uniqueness:

YugabyteDB is a transactional database that brings together 4 must-have needs of cloud native apps, namely SQL as a flexible query language, low-latency performance, continuous availability and globally-distributed scalability. Other databases do not serve all 4 of these needs simultaneously.

- Monolithic SQL databases offer SQL and low-latency reads but neither have ability to tolerate failures nor can scale writes across multiple nodes, zones, regions and clouds.
- Distributed NoSQL databases offer read performance, high availability and write scalability but give up on SQL features such as relational data modeling and ACID transactions.
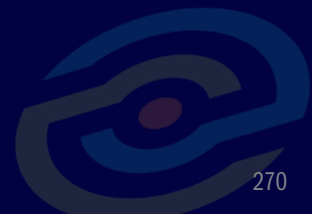

Product Issuer : Zimbra
Issuer's Business Type : Email Management

ABOUT

Zimbra powers collaboration for the way you work. Zimbra connects people and information with unified collaboration software that includes email, calendaring, file sharing, activity streams, social communities and more. With technology designed for social, mobile and the cloud, Zimbra gives individuals the flexibility to work from virtually anywhere, through nearly every computer, Tablet and mobile device.

PRODUCT OVERVIEW

Zimbra Collaboration
is an open, secure collaboration tool for email, calendaring, tasks and more.

Zimbra Social
Yes, it an exclusive-private Social Media platform for your company. It's drive engagement in your organization and with your customers with Zimbra

Zimbra® Sync and Share™
Is quickly and efficiently launch a secure, branded cloud storage solution with consumer-like usability

Product Issuer	: Tenable
Issuer's Business Type	: Cybersecurity Company
Headquarter	: Columbia, USA
Product Website	: www.tenable.com
Distributor in Indonesia	: PT. Virtus Technology Indonesia
Target Market	: Organizations, Enterprises, and SMEs
Solutions	: IT/IOT, App Security, Cloud Security, Compliance
Service Scale	: Cybersecurity

ABOUT

Tenable, known as The Cyber Exposure Company, provides a vulnerability management solution that identifies vulnerabilities in devices and IT systems. It's also provides a remediation solution that prioritizes risk on the basis of vulnerability identification.

SOLUTION LINEUP

1. IT/ OT
The convergence of Operational Technology (OT) and IT systems can optimize production, drive innovation, and improve sustainability. You can also monitor and measure your cybersecurity risk.

2. Application Security
Manage risk by implementing modern application security measures to perform vulnerability assessments, detect malware, and ensure compliance before deploying applications to secure your DevOps process.

3. Cloud Security
Gain full visibility and accurate insight into your dynamic cloud assets. Detect vulnerabilities, malware, and misconfigurations across your cloud-based and on-premises environments.

4. Compliance
Reduce your organization's cyber exposure gap with a single protective control foundation that supports multiple compliance and security frameworks.

virtus
a member of CTI Group

1. Improved security posture

Analyze the output of multiple preventive security tools to gain a better understanding of the organization's overall security posture. Easily identify strengths and weaknesses and quickly address security gaps that may have gone unnoticed in a siloed, multi-vendor environment. Trend analysis is more consistent due to a single cyber risk score from a single platform, which makes it easier to track and measure KPIs and SLAs.

2. Reduced Complexity

Integrate security solutions to create a cohesive system that enforces a consistent set of security policies and procedures. This approach provides you with a unified method for managing the various aspects of your proactive security program, resulting in more efficient and effective at detecting, responding to, and managing vulnerabilities, misconfigurations, and other weaknesses.

3. Improved Prioritization of Exposure for Remediation

Organizations can get a more accurate picture of the risks to their systems by combining and prioritizing vulnerabilities, misconfigurations, identity and privilege issues, and other weaknesses, both on-premises and in the cloud. Then focus on remediation of the most pressing issues within the most critical assets and information.

4. Simplified Management

A single platform makes it easy to manage multiple preventive security solutions from multiple vendors and interfaces. Technical support is simplified with a single point of contact for both initial and ongoing operations.

5. Improved Integration of Tools

Integrates multiple cybersecurity systems into a unified solution to reduce security gaps, facilitate data exchange between tools, and improve overall enterprise security.

6. Unified Reporting

Consolidates reporting in one place, eliminating the need to switch between reporting tools, dashboards, or spreadsheets, making it easier for security teams to analyze vulnerabilities, track progress, and measure performance. Identify issues before they become significant problems, enabling faster implementation of preventative measures. A single cyber risk score from multiple sources enables clear communication of security status to non-technical stakeholders in the C-suite who need to know how secure the organization is.

7. Cost Effective

With a single platform and licensing model, organizations can take advantage of bundled pricing and economies of scale. This also improves time-to-value through the reduction of procurement and deployment time. Tenable can facilitate price negotiations and reduce overhead costs.

PRODUCT OVERVIEW

- **Tenable.cs (cloud security)**

Unify your cloud security posture and vulnerability management.

- **Tenable.ad (active directory)**

Continuously detect and respond to Active Directory attacks. No agents, no privileges, on-premises and in the cloud.

- **Tenable.io (web app scanning)**

Simple, scalable, and automated web applications vulnerability scanning.

- **Tenable.io (vulnerability management)**

The visualization, analytics, and measurement solution to transform vulnerability data into meaningful insights.

- **Nessus**

#1 vulnerability assessment solution for the modern attack surface.

- **Tenable.sc (security center)**

See everything, predict what matters, and managed it on-premises.

- **Tenable.ot (operational technology)**

Gain comprehensive visibility, security, and control of your OT network.

Product Issuer	: Airlabs
Issuer's Business Type	: Environmental Research
Headquarter	: London, England
Product Website	: www.airlabs.com
Target Market	: Car owner, Public Transportation, Medical Vehicle
Solutions	: Car Air Purifier
Service Scale	: Limited Warranty

ABOUT

AirLabs is a pioneer in clean air technology. We map, measure, monitor and clean polluted air to make it safe for people to breathe. We understand the exact chemical makeup of pollution and combine atmospheric chemistry, airflow engineering and out of the box thinking to develop solutions that are founded in science and shaped by our customers.

PRODUCT OVERVIEW

Airbubbl

The Airbubbl is the only in-car air cleaner that able to remove gaseous pollutants such as Nitrogen Dioxide (NO2), Ozone and Volatile Organic Compounds (VOCs). It also removes particulates such as dust, pollen, soot, fibres, PM2.5 and PM10 along wiht bacteria and viruses

Filter Type   : Airlabs filter catridge contains a high grade particle filter, along with a patented nanocarbon layer.
Clean Air Delivery Rate : 30m3/h
Size & Weight   : 31x12 cm & 0,8 kg
Colour   : Space grey,brushed aluminium, grey fabric cover, grey strap

A BREATH OF FRESH AIR

Pollution from exhausts... you cannot see, feel, touch or smell it. However it can damage or even kill you. Only Airbubbl cleans ALL the deadly gases and particles that enter your vehicle.

ABOUT

KEENON Robotics Co., Ltd. is an artificial intelligence enterprise committed to providing intelligent unmanned delivery solutions for global enterprises. Founded in 2010, KEENON Robotics has become a dependable business partner in the global markets with coverage of over 60 countries worldwide. By applying advanced intelligent service robots and AI technology, the company has created efficient, stable, reliable and practical solutions, helping enterprises in various industries around the world improve service efficiency and realize intelligent upgrading. At present, the Company serves customers from various fields, including catering, medical care, hotel, venue, business office, community pension, and airports.

With stable and reliable products, rich global project experience, and efficient and high-quality after-sales service, KEENON Robotics has become the partner of many other well-known brands at home and abroad, including Haidilao, Grandma's Home, Guangzhou Restaurant, Quanjude, Sofitel Hotels, Westins Hotels, Hilton Hotels.

Hello

Offers / List of Products

T5 Dinerbot, food delivery robot (Label Ver & Laser Ver)
T6 Dinerbot, food delivery robot
T8 Dinerbot, food delivery robot
W3 Butlerbot, Hotel delivery robot
G2 Guiderbot, guidance robot
M2 Disinfection robot, medical robot for disinfecting

Product's description, specialty & uniqueness

T5, food delivery robot (Label Ver & Laser Ver)
It has 4 trays, which are also adjustable in terms of different needs. 4 trays are suitable for large restaurants with large delivery requirements. The total load capacity is about 40kg. It has a built-in LED screen in the front, with two eyes on it, it can make different vivid expressions. The biggest feature of this robot is that it is very stable, thanks to the materials it adopted, the anti-vibration chassis it equipped. It is even easy to deliver a cup of water or food with soup. At present, T5 is one of the main models that we are selling in overseas markets.

T6, food delivery robot
Just like the T5, it also has a 4-trays structure. You may ask what's different compared with the T5, it's more like an economical model, with a lot of simplified structure and removed some unnecessary functions, so that its cost can be much lower than T5. But its performance is still very good. It has a built-in touch screen on the top front side, you can operate on the screen, it turns to be a face during delivery time, it can make 9 vivid express. This robot has been widely used in the Canadian and Malaysian markets and has been well praised by customers.

T8, food delivery robot
Around 1 meter high, 32kg weight, with 3 layers and capacity of 20kg, T8 is small but powerful. With 10inch touch screen, which is the biggest one among the Keenon robots, with 6 microphones to provide perfect voice collecting and intercom ability. For the upper two trays, it has a plate inspection camera

for each one, to detect if the plate has been taken or not. Which means the customer doesn't have to tap on the screen to ask the robot to leave anymore, you just take out the food, and that's it.

W3, Hotel delivery robot
There are 4 compartments, 2 in the upper space, 2 in the lower space to put different things in different compartments and deliver to different rooms at one time. It has 90 liters of space in total, which can meet most of the requirements.

And the compartments can be switched freely. It can be changed from 4 into 2, you just remove the partition plate in the middle, and you combine 2 small ones into 1 big one. You can even switch it in to 3 by remaining 1 plate in the middle.

This flexible design can meet different requirements, and it increased the delivery efficiency by 300%.

G2, guidance robot
G2 have a very special design , like a child holding a screen by his hands. The screen he is holding is not for operating, it is for placing some advertisement on it. It is double sided. You can put both videos and pictures on it, you can use it to put on some welcome words, you can use it to put on some special dishes, you can use it to put on some promotional videos.

M2, medical robot for disinfecting
On the top are 6 nozzles for spraying the disinfectant, it can spray 0.5 liters to 1.5 liters per hour. Below the nozzles, there is filler port, which is used for filling the disinfectant fluid, this maximum volume is 10 liters. Which means the robot can work for about 10 hours until the fluid is used up. In the middle part of the robot, is a set of 4 UV lamps, iwhich can cover the 360-surround environment. It can go to multiple different rooms for disinfection at one time, and you don't need to reset it after each task.

Through long-term experience in research and development, Teltonika developed a broad portfolio of products for the most complex areas of Industry 4.0, Smart City, and Green Energy. Teltonika controls every stage of the product development cycle, enabling to respond to market needs quickly and effectively.

PRODUCT OVERVIEW

INDUSTRIAL CELLULAR ROUTER

1. RUT200 (Wi-Fi router manage / Retail)
4G/LTE (Cat 4), 3G, 2G / 16 MB Flash, 128 MB RAM, 4-pin power socket, 9-30 VDC / 2 x 10/100 Mbps Ethernet ports: 1 x WAN (configurable as LAN), 1 x LAN / IEEE 802.11b/g/n, Access point (AP), Station (STA) / On 4-pin socket: 1 x Digital input, 1 x Digital open collector output

Housing & Mounting
Aluminum housing, plastic panels with DIN rail mounting option

Measurements & Weight
83 x 25 x 74 mm, 125 g

2. RUT901 (Wi-Fi router manage / Retail)
4G/LTE (Cat 4), 3G, 2G / 16 MB Flash, 128 MB RAM / 4-pin power socket, 9-30 VDC / 4 x 10/100 Mbps Ethernet ports: 1 x WAN (configurable as LAN), 3 x LAN / IEEE 802.11b/g/n, Access point (AP), Station (STA) / On 4-pin socket: 1 x Digital input, 1 x Digital open collector output

Housing & Mounting
Aluminum housing with DIN rail mounting option, plastic panels with flat mounting option

Measurement & Weight
110 x 50 x 100 mm, 297 g

3. RUT956
4G/LTE (Cat 4), 3G, 2G / 16 MB Flash, 128 MB RAM / 4-pin power socket, 9-30 VDC / 4 x 10/100 Mbps Ethernet ports: 1 x WAN (configurable as LAN), 3 x LAN / IEEE 802.11b/g/n, Access point (AP), Station (STA) / 1 x RS232; 1 x RS485; 1 x USB host; On 4-pin socket: 1 x Digital input, 1 x Digital open collector output; On 10-pin socket: 1 x Isolated digital input, 1 x Digital dry input, 1 x Analog input, 1 x Isolated open collector output (requires external voltage), 1 x Relay output (non-latching); GNSS

Housing & Mounting
Aluminum housing with DIN rail mounting option, plastic panels with flat mounting option

Measurements & Weight
110 x 50 x 100 mm, 287 g

4. RUTX50
INDUSTRIAL 5G ROUTER
5G Sub-6Ghz SA/NSA, 4G/LTE (Cat 20), 3G / 256 MB Flash, 256 MB RAM / 4-pin power socket, 9-50 VDC / 5 x RJ45 ports, 10/100/1000 Mbps: 1 x WAN (configurable as LAN), 4 x LAN / IEEE 802.11b/g/n 2.4GHz, IEEE 802.11ac/n/a 5GHz, Access point (AP), Station (STA) / 1 x USB host; On 4-pin socket: 1 x Digital input, 1 x Digital open collector output; GNSS

Housing & Mounting
Aluminum housing with DIN rail mounting option

Measurements & Weight
132 x 44.2 x 95.1 mm, 533 g

5.RUTX11

4G/LTE (Cat 6), 3G / 256 MB Flash, 256 MB RAM / 4-pin power socket, 9-50 VDC / 4 x RJ45 ports, 10/100/1000 Mbps: 1 x WAN (configurable as LAN), 3 x LAN / IEEE 802.11b/g/n 2.4GHz, IEEE 802.11a/n/ac 5GHz, Access point (AP), Station (STA) / 1 x USB host; On 4-pin socket: 1 x Digital input, 1 x Digital open collector output; GNSS / Bluetooth 4.0 (Low energy)

Housing & Mounting
Aluminum housing with DIN rail mounting option

Measurements & Weight
115 x 44.2 x 95.1 mm, 456 g

DIN RAIL SWITCH

1. TSW010 (Non POE)
2-pin power DC socket, 9 - 30 VDC / 5 x RJ45 ports, 10/100 Mbps / Bw (Non-blocking) 1 Gbps

Housing & Mounting
Anodized aluminum housing and panels; Integrated DIN rail bracket

Measurements & Weight
113.1 x 27.4 x 80.5 mm, 146.5 g

2. TSW200 (POE)
2-pin power socket, 7-57 VDC (input voltage range for PoE 44-57 VDC) / 802.3af and 802.3at, 240 W / 8 x RJ45 ports, 10/100/1000 Mbps / Bw (Non-blocking) 20 Gbps / 2 x SFP

Housing & Mounting
Aluminum housing; Integrated DIN rail bracket (on a standart order code)

Measurements & Weight
132 x 44.2 x 95.1 mm, 517 g"

Issuer's Business Type : Project Based
Headquarter : 128 Av. du Maréchal de Lattre de Tassigny, 87045 Limoges, France
Product Website : https://www.legrand.co.id/en/ups
Target Market : Manufacturing, Hospital, Data Center, Hotel
Solutions : Measurement, monitoring and analysis of active energy to improvements in the quality and guarantee of energy continuity. Regardless of the stage of efficiency maturity we are in, we can go through the steps to achieve maximum energy efficiency and reduce the environmental impact and work on saving consumption and responsible use.
Service Scale :

ABOUT

Legrand is a French industrial group historically based in Limoges in the Limousin region. Legrand is the global specialist in electrical and digital building infrastructures, offering high-value-added products and solutions that improve lives by transforming the spaces where people live, work and meet. Operating worldwide, Legrand works to enhance electrical and digital building infrastructures, embracing the shift to digital technologies while contributing to reduced carbon footprints. Legrand solutions are used in residential and non-residential buildings, as well as in datacenters, industrial spaces and infrastructure. Legrand's beginnings were essentially European, but today it has a global presence. Operating on international markets, Legrand is established in close to 90 countries, and its products are distributed on every continent, in nearly 180 countries. Legrand offers over 300,000 references of products and solutions that are sold worldwide and are easy to use, innovative and sustainable. These are installed in spaces where people live, from individual and collective housing to hotels and more. In spaces where people work, including datacenters, offices and industrial sites. And in spaces where people meet, from housing to shops, hospitals, schools, universities and more.

PRODUCT OVERVIEW

- Keor S
- Keor LP
- Daker DK Plus
- Keor Compact

- Keor T Evo
- Keor HP
- Keor HPE
- Keor XPE

legrand®

Product's description, specialty

Keor S
The integrated maintenance bypass simplifies the maintenance operations, increases the service continuity and helps to reduce the complexity of the installations.

Keor LP
The distributed power, from 1000 VA to 3000 VA, provides high level electrical protection for medium power devices. All models have a backup time that can be extended by adding battery cabinets

Daker DK Plus
The main parameters of the system and the status of the UPS, including the battery charge level and faults, are displayed on the LCD screen. The models from 5 to 10 kVA have power factor1 with an efficiency up to 94%

Keor Compact
It delivers a rated power of 10-15-20 kVA.With its compactness and easy installation and use, Keor Compact is perfect for all typical three phase small power applications, special for small technical room

Keor T Evo
KEOR T EVO UPS is a three-phase uninterruptible power supply, On-line Double Conversion to provide continuity the rated power of 10-15-20-30-40-60 kVA. Based on Transformer-Free Architecture and 3-Level IGBT technology, it is able to operate at High Efficiency supplying High Quality Energy to the load.
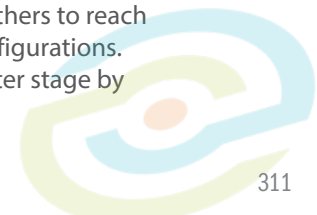

Keor HP
Keor HP UPS is a three-phase uninterruptible power supply On-line Double Conversion with PWM high frequency and the possibility to be connected in parallel to have N+X redundancy up to total 6 units. It delivers a rated power of 60-80-100-125-160-200-250-300-400-600-800kVA

Keor HPE
Keor HPE UPS is a three-phase uninterruptible power supply On-line Double Conversion with 3-Level IGBT technology, PWM high frequency and with the possibility to be connected in parallel to have N+X redundancy up to total 6 units. It delivers a rated power of 60-80-100-125-160-200-300-400-500-600kVA. Keor HPE with its hi-efficiency and reliability, provides continuous and hi-quality energy for critical loads in Tertiary, Industry, Heltcare and Transport applications.

Keor XPE
It's a complete Scalable UPS System based on 250 kVA or 300 kVA power units up to 2.1 MVA. Power units, each one with its individual logic control, can be combined with others to reach the needed power, or implement redundant configurations. Power expansion can be easily carried out at a later stage by

Product Issuer	: UNV NVR & AI Box
Issuer's Business Type	: IT Retail Distribution, Project Base
Headquarter	: No. 369, Xietong Road, Xixing Sub-district, Binjiang District, Hangzhou City, Zhejiang Province, China
Product Website	: https://www.uniview.com/Products/
Target Market	: Manufacturing, Oil & Gas, Airport, Industrial, Banking, Residental, Convenience store, Logistics, Office, Government
Solutions	: Based on advanced technologies, Uniview solutions provide highly visual system that includes detecting, alarming and recording. It's a perfect solution to improve perimeter protection and achieve efficient management
Service Scale	: Enterprise, Government

ABOUT

Uniview, also known as Uniview Technologies, is a Chinese video surveillance manufacturer founded in 2005, with headquarters in Hangzhou. As a top 3 product in China for video surveillance, UNV bring the solutions for every needs that support you with products IP Camera, Network Video Recorder, Video Monitoring System, AI Box, and Display. Also Uniview has been selling "public safety" solutions to the Chinese government.

PRODUCT OVERVIEW

Offers/List of Products:

- NVR
- Smart Box
- VMS
- Video surveillance
- Display

Product's description, specialty

NVR
UNV NVR includes Easy, Prime and Pro series, which can be adapted to different application scenarios. UNV NVR has high quality genes to ensure the reliability of devices and the whole system, focusing on user experience to simplify every operation process.

Smart Box
When working with CCTV system, Smart BOX can provide computing power to save that of the VMS. Also, it is easy and flexible to empower different sites with corresponding computing power by different numbers of Smart BOX.

VMS
The software deployment of VMS is simple, stable and reliable. They can not only be widely used in LAN-based application scenarios such as residential area, building, campus, hotel and shopping mall, but also in WAN-based application scenarios such as chain store and bank. UNV VMS devices can easily solve the problems caused by decentralized management.

Video Surveillance
Divided by 3 types included IP Cam, PTZ Camera, and Thermal Camera for indoor and outdoor use been trusted for durability and solutions for every need. Supported by the latest technology, it produces recordings that are clear and look like real.

Display
Divided by Intercative Display, LED Display, LCD Video Wall, Controler, Monitors been the successor for many sector on Retail, Education, Corporate, Airport, and Control Room.
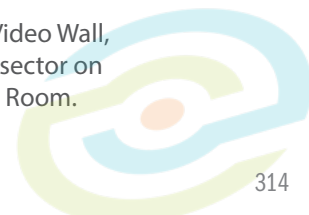

About CTM

Innovation is the key to business growth. Computrade Technology Malaysia helps companies to innovate with a portfolio of advanced solutions and services, advisory consultation, and being a Value-Added Distributor to some of the leading brands in the IT industry today. Product Issuer	: Amazon Web Service, Inc.
Issuer's Business Type	: Cloud Service Provider
Headquarter	: Seattle, Washington, United States
Product Website	: www.aws.amazon.com
Target Market	: Cross Industry
Solutions	: Cloud
Service Scale	: Start-Up, Multinational Company, Education, Government, Enterprise, SME

ABOUT

Amazon Web Services (AWS) is a subsidiary of Amazon that provides on-demand cloud computing platforms to individuals, companies, and governments, on a metered pay-as-you-go basis. In aggregate, these cloud computing web services provide a set of primitive abstract technical infrastructure and distributed computing building blocks and tools. One of these services is Amazon Elastic Compute Cloud, which allows users to have at their disposal a virtual cluster of computers, available all the time, through the Internet. AWS's version of virtual computers emulate most of the attributes of a real computer including, hardware central processing units (CPUs) and graphics processing units (GPUs) for processing, local/RAM memory, hard-disk/SSD storage; a choice of operating systems; networking; and pre-loaded application software such as web servers, databases, customer relationship management (CRM), etc.

PRODUCT OVERVIEW

SAP on AWS

SAP and AWS have collaborated since 2011 to certify AWS for production deployments of SAP applications, platforms, and databases. Accelerate time-to-value, improve operational and cost efficiencies, and operate more securely than on-premises. AWS offers the broadest and deepest set of native cloud services, spanning traditional services like compute, storage, and databases, as well as emerging technologies like IoT and machine learning on top of a reliable global infrastructure.

Benefits:
a. Achieve faster time to value

Provision infrastructure for SAP HANA in hours versus weeks or months.

b. Reduce cost

Pay for only the infrastructure resources that you need and use.

c. Achieve a higher level of availability

Combine Amazon EC2 Auto Recovery, multiple Availability Zones, and SAP HANA System Replication (HSR).

Backup and Disaster Recovery

Our storage services for object (Amazon S3 and Amazon S3 Glacier), file (Amazon Elastic File System), and block (Amazon Elastic Block Storage) support industry-leading scalability, availability, durability, and security so your backups are protected and available when needed.Protect backups with 99.999999999% data durability with s3.Scale up your backup resources in minutes as data requirements change and also

Spend efficiently with pay-as-you-go pricing.

Benefits:
a. Non-disruptive

CloudEndure operates in the background, without requiring reboot or impacting your system in any noticeable way. Our Continuous Data Protection engine works in memory, does not use snapshots, and does not write any data to disk, which means near-zero impact on performance.

b. Any application from any source

CloudEndure supports physical, virtual, and cloud-based source infrastructure, and all applications running on supported operating systems, including databases and other write-intensive workloads. You can use the same automated process to replicate and recover workloads in AWS regardless of OS type/version, application, or database.

c. Minimal RTO and RPO

Unlike snapshot-based solutions that update target locations at distinct, infrequent intervals, CloudEndure uses Continuous Data Protection, enabling sub-second Recovery Point Objectives (RPOs). Highly automated machine conversion and orchestration enable Recovery Time Objectives (RTOs) of minutes.

Web and mobile apps Infrastructure

AWS offers 32 instance types with different amounts of compute, memory, I/O performance, graphics hardware so you can choose the ones that work best for your app. AWS offers both Linux and Windows instances and gives you root access to each one.Automated scaling makes it easier to administer applications with variable demand. When traffic increases, our Auto Scaling service will launch additional instances to respond to the demand, and our Elastic Load Balancing service will distribute the increased load across your instances. When demand decreases, Auto Scaling can shutdown idle instances, saving you money.

Benefits:
a. Automated scaling.

Automated scaling makes it easier to administer applications with variable demand. When traffic increases, our Auto Scaling service will launch additional instances to respond to the demand, and our Elastic Load Balancing service will distribute the increased load across your instances. When demand decreases, Auto Scaling can shutdown idle instances, saving you money.

b. Less expensive to run

AWS provides on-demand access to a wide range of cloud infrastructure services, charging you only for the resources you actually use. AWS enables you to eliminate the need for costly hardware and the administrative pain that goes along with owning and operating it. AWS can reduce costs and improve cash flow, whether you are starting out or operating on a large scale.

c. Distributed architectures for high availability

Different parts of your app require different compute, memory, and networking configurations. AWS offers 32 instance types with different amounts of compute, memory, I/O performance, graphics hardware so you can choose the ones that work best for your app. AWS offers both Linux and Windows instances and gives you root access to each one.

AWS on IOT Analytics

AWS IoT Analytics is a fully managed and pay-as-you go service that scales automatically to support up to petabytes of IoT data. With IoT Analytics, you can analyze your entire fleet of connected devices without managing hardware or infrastructure. As your needs change, compute power and the data store automatically scale up or down so you always have the right capacity for your IoT applications and you only pay for the resources that you use.

Benefits:
a. Operationalize your analytical workflows

You supply the analysis, AWS IoT Analytics automates the execution of your analysis when and where you need it. AWS IoT Analytics will import your custom authored code containers, built in external tools such as Matlab, Octave, etc, and execute them on your schedule to generate operational insights, giving you more time to focus on what you do best.

b. Easily run queries on IoT data

With AWS IoT Analytics, you can run simple, ad-hoc queries

using the built-in SQL query engine. Using standard SQL queries to extract data from the data store, you can calculate the average distance traveled of a fleet of vehicles or number of doors locked in a smart building, for example. Also, AWS IoT Analytics provides a series of non-overlapping, contiguous time windows to perform analysis on new, incremental data. You can improve analysis efficiency and lower costs by scanning only the data you need.

c. Tools for machine learning

AWS IoT Analytics makes it easy to apply machine learning to your IoT data with hosted Jupyter notebooks. You can directly connect your IoT data to the notebook and build, train, and execute models right from the AWS IoT Analytics console without having to manage any of the underlying infrastructure. Using AWS IoT Analytics, you can apply machine learning algorithms to your device data to produce a health score for each device in your fleet. For example, an auto manufacturer can detect which of their customers have worn brake pads and alert them to seek maintenance for their vehicles. With just the click of a button, you can also package your Jupyter Notebook code into an executable container image and execute that container on AWS IoT Analytics as needed.

Devops

These services simplify provisioning and managing infrastructure, deploying application code, automating software release processes, and monitoring your application and infrastructure performance. With AWS purchase services as you need them and

only for the period when you plan to use them. AWS pricing has no upfront fees, termination penalties, or long term contracts. The AWS Free Tier helps you get started with AWS.

Benefits:

a. Speed

Move at high velocity so you can innovate for customers faster, adapt to changing markets better, and grow more efficient at driving business results. The DevOps model enables your developers and operations teams to achieve these results. For example, microservices and continuous delivery let teams take ownership of services and then release updates to them quicker.

b. Rapid Delivery

Increase the frequency and pace of releases so you can innovate and improve your product faster. The quicker you can release new features and fix bugs, the faster you can respond to your customers' needs and build competitive advantage. Continuous integration and continuous delivery are practices that automate the software release process, from build to deploy.

c. Reliability

Ensure the quality of application updates and infrastructure changes so you can reliably deliver at a more rapid pace while maintaining a positive experience for end users. Use practices like continuous integration and continuous delivery to test that each change is functional and safe. Monitoring and logging practices help you stay informed of performance in real-time.

Machine learning

AWS has the broadest and deepest set of machine learning and AI services for your business. On behalf of our customers, we are focused on solving some of the toughest challenges that hold back machine learning from being in the hands of every developer. You can choose from pre-trained AI services for computer vision, language, recommendations, and forecasting; Amazon SageMaker to quickly build, train and deploy machine learning models at scale; or build custom models with support for all the popular open-source frameworks. Our capabilities are built on the most comprehensive cloud platform, optimized for machine learning with high-performance compute, and no compromises on security and analytics.

Benefits:

a.Build

Build highly accurate training datasets. Amazon SageMaker Ground Truth helps customers build highly accurate training datasets quickly using machine learning and reduce data labeling costs by up to 70%. Successful machine learning models are trained using data that has been labeled to teach the model how to make correct decisions. This process can often take months and large teams of people to complete. SageMaker Ground Truth provides an innovative solution to reduce cost and complexity, while also increasing the accuracy of data labeling by bringing together machine learning with a human labeling process called active learning.

b.Train

When you're ready to train in Amazon SageMaker, simply specify the location of your data in Amazon S3, and indicate the type and quantity of Amazon SageMaker ML instances you need, and get started with a single click in the console. Amazon SageMaker sets up a distributed compute cluster, performs the training, outputs the result to Amazon S3, and tears down the cluster when complete.

c.Deploy One-click Deployment

You can one-click deploy your model onto auto-scaling Amazon ML instances across multiple availability zones for high redundancy. Just specify the type of instance, and the maximum and minimum number desired, and Amazon SageMaker takes care of the rest. It will launch the instances, deploy your model, and set up the secure HTTPS endpoint for your application. Your application simply needs to include an API call to this endpoint to achieve low latency / high throughput inference. This architecture allows you to integrate your new models into your application minutes because model changes no longer require application code changes.

d. Fully-managed Hosting with Auto Scaling

Amazon SageMaker manages your production compute infrastructure on your behalf to perform health checks, apply security patches, and conduct other routine maintenance, all with built-in Amazon CloudWatch monitoring and logging.

e. Batch Transform

Batch Transform enables you to run predictions on large or small batch data. There is no need to break down the data set into multiple chunks or managing real-time endpoints. With a simple API, you can request predictions for a large number of data records and transform the data quickly and easily.

Orchestration

Run containers on Amazon EC2 Spot Instances to receive up to a 90% discount compared to On-Demand prices. Containers are often stateless and fault-tolerant, making them a great fit for Spot Instances. You can easily run ECS clusters at scale by mixing Spot Instances with On-Demand and Reserved Instances.

Benefits:

a. Containers without servers

Amazon ECS features AWS Fargate, so you can deploy and manage containers without having to provision or manage servers. With Fargate, you no longer have to select Amazon EC2 instance types, provision, and scale clusters of virtual machines to run containers or schedule containers to run on clusters and maintain their availability. Fargate enables you to focus on building and running applications, not the underlying infrastructure.

b. Secure

 Amazon ECS launches your containers in your own Amazon VPC, allowing you to use your VPC security groups and network ACLs. No compute resources are shared with other customers. You can also assign granular access permissions for each of your containers using IAM to restrict access to each service and what resources a container can access. This high level of isolation helps you use Amazon ECS to build highly secure and reliable applications.

c. Performance at scale

Amazon ECS is built on technology developed from many years of experience running highly scalable services. You can launch tens or tens of thousands of Docker containers in seconds using Amazon ECS with no additional complexity.

d. AWS integration

Amazon ECS is deeply integrated with AWS services including Elastic Load Balancing, Amazon VPC, AWS IAM, Amazon ECR, AWS Batch, Amazon CloudWatch, AWS CloudFormation, AWS CodeStar, and AWS CloudTrail. This gives you a complete solution for building and running a wide range of containerized applications.

Product Issuer	: Dbvisit
Issuer's Business Type	: Disaster Recovery Software
Headquarter	: New Zealand
Product Website	: www.dbvisit.com
Target Market	: Cross industry
Solutions	: Oracle database replication software and support
Service Scale	: SMEs, Enterprise

ABOUT

Dbvisit develops, sells and supports innovative software that protects data in Oracle Standard Edition databases. Our solution Dbvisit Standby provides full Disaster Recovery capability for companies running Oracle Standard Edition databases, ensuring they can protect and access their critical data after unexpected outages, whether located in the cloud, hybrid or on-premises. We offer worldwide, world-class support and product training, and our trusted global 130+ partner network provides local consulting, implementation and other training services. With Dbvisit Standby, Dbvisit customers can ensure business continuity whenever disaster strikes, or unexpected outages occur. Swapping to the standby database quickly and efficiently means businesses can continue without significant disruption and without the need for complex data restoration procedures.

PRODUCT OVERVIEW

Dbvisit Standby for Oracle SE Disaster Recovery

Cost effective Oracle database replication solution to easily manage and create Oracle Standard Edition (SE) and Oracle Standard Edition 2 (SE2) standby databases - #1 Disaster Recovery Tool for SE. It's simple and hassle free

Key Feature:

1. Graceful Switchover

Zero data loss planned switchovers enable easy migrations and testing.

2. Fail Over

The failover assistant enables one-click failover, triggered manually or automatically.

3. Synchronize

Automatic resynchronization eliminates the risk of being exposed during manual rebuild.

4. Reporting

Real-time monitoring with heartbeat notifications, status alerts, and log gap reports.

5. Snapshot

Offload reporting, test/dev environments, and DR testing to your standby database.

6. DR Test Mode

Effortlessly perform comprehensive DR tests without affecting your standby databases.

Benefits:

- Easy to install, configure and manage
- Reduce management time, greater control over standby databases
- Provides data security and confidence
- Get full on-going Oracle support
- Available on-premise, cloud-based, or hybrid.
- Enterprise-class DR on Oracle SE remains affordable with our low-bandwidth architecture

Product Issuer : Defenxor
Issuer's Business Type : Cyber security, Cyber Defense, Information Security,
Intelligence, Information Technology, Machine Learning
Headquarter : Indonesia
Product Website : www.defenxor.com
Distributor in Philippines : Computrade Technology Philippines, Inc.
Target Market : Cross Industry
Solutions : Software Security
Service Scale: SME, Enterprise & Multinational Company

ABOUT

We are Defender Nusantara Semesta (DNS). We are providing IT security for businesses that safeguards business assets, by improving their information security levels to higher and acceptable levels. DNS is a security partner of Computrade Technology Indonesia, a holding company that focuses on IT, and is one of the biggest IT Infrastructure Solution Partner in the region with long experience and strong commitment. Our name originates from the word 'defender', usually found in soccer as a guard role. It's also a wordplay on the abbreviation 'DNS' which is a common term for Domain Name Service, an essential and unseparable part of the IT and Internet world.

PRODUCT OVERVIEW

Defenxor Intelligence Managed Security (DIMS)

To be able to protect business from today's threats, typically you need to have the hardware capabilities, the experts to operate it, and policy as 'rule of the game'. These holistic approach (Technology, People and Process) is necessary to achieve optimum security condition. Professional IT security experts are costly, besides being very hard to find in the industry while find and adopting suitable IT Security policy and procedure sometimes leads company to frustration. And then we have security threats that are evolving every day, abundant power & resource costs, compatibility issues, compliance, and so on. Sounds painstakingly complex? It doesn't have to be that way.

Defenxor Intelligence Security Consulting (DISC)

With increasingly high adoption of BYOD and BYOA, policies can make or break the security of your business. Reduce risks by defining the correct policies and enforcing it optimally.

Security Audit can help you on evaluate your current posture and identify the gaps between real condition and those criteria.

Assistance for your internal IT security team to improve their capabilities and ensuring that every implementations are up to standard. We also provide assistance for developing and delivering your internal Security Operation Center to achieve it's defined goals.

Lightning-fast response and mitigation procedures for incidents, and when combined with our DIMS solution, we provide a holistic security approach that will keep your business running smoothly in the process.

PRODUCT OVERVIEW

Defenxor Intelligence Managed Security (DIMS)

We are Defender Nusantara Semesta (DNS). We are providing IT security for businesses that safeguards business assets, by improving their information security levels to higher and acceptable levels. DNS is a security subsidiary of Computrade Technology Indonesia, a holding company that focuses on IT, and is one of the biggest IT Infrastructure Solution Partner in the region with long experience and strong commitment. Our company name originates from the word 'defender', usually found in soccer as a guard role. It's also a wordplay on the abbreviation 'DNS' which is a common term for Domain Name Service, an essential and unseparable part of the IT and Internet world. Our brand name is Defenxor. Defenxor originates from the word 'Defensor', which is a Latin word for Guardian, or protector. The brand has 3 business pillars, which are reflected in its services.

Defenxor Intelligence Security Consulting (DISC)

With increasingly high adoption of BYOD and BYOA, policies can make or break the security of your business. Reduce risks by defining the correct policies and enforcing it optimally.

Security Audit can help you on evaluate your current posture and identify the gaps between real condition and those criteria.Vulnerability Assessment and Penetration Testing will find and evaluate any existing Vulnerabilities that might harm your business before exploited by the bad-guy.

Assistance for your internal IT security team to improve their capabilities and ensuring that every implementations are up to standard. We also provide assistance for developing and delivering your internal Security Operation Center to achieve it's defined goals. Lightning-fast response and mitigation procedures for incidents, and when combined with our DIMS solution, we provide a holistic security approach that will keep your business running smoothly in the process.

Defenxor Intelligence Security Integrator

Defenxor Intelligence Security Integrator (DISI)

Defenxor makes it easier for you to avoid security hardware's huge CAPEX through our installment program, therefore converting it into OPEX for your business for optimum ROI. Besides providing installment, we also add value to the service by including Managed Security Services in the package, so you get the best bang for your buck. Security should be affordable but also easy to manage, so you can focus more on your bottom line.

Main Features

1. Installment Program For Security Device Ownership
Lowering CAPEX, optimizing OPEX to provide your business with optimum ROI
2. Competitive Price for Security Device
The advantage of our wide network of hardware distribution, so you get the best price in the market, always.
3. Additional managed Services
We will also provide monitoring and management of security function, bundled with purchase of products from us

DISI Differentiation

1. Wide range of Security Products.
2. Capable and certified security engineer to install and deploy the produtcs
3. First to come up with flexible financing program and value-add for bundled security services

At Defenxor, We Believe That Security Should Be Simple

We can help you reduce the complexity of managing IT Security, ensure faster & better incident response and also manage regulatory & compliance requirements.

DEFENXOR INTELLIGENT MANAGED SECURITY

- Advanced Security Operations Center (SoC) to Protect Your Business
- Around-the-clock Protection, It Simply Never Sleeps
- Highly Standardized Technology
- Defenxor Appliances
- Defenxor Mobile Application
- Bundled Services
- White-Labelling Support
- Additional Services Available

DEFENXOR INTELLIGENCE SECURITY CONSULTING

- Security Policy Development & Deployment
- Security Auditing
- Security Assistance
- Incident Response & Management
- Penetration Testing & Compromised Testing
- Security Certification

DEFENXOR INTELLIGENCE SECURITY INTEGRATOR

- Installment Program For Security Device Ownership
- Competitive Price for Security Device
- Additional managed Services

Product Issuer	: Inspire-Tech Pte Ltd
Issuer's Business Type	: Enterprise File Synchronization and Sharing
Headquarter	: Singapore
Product Website	: www.easishare.com
Target Market	: Cross Industry
Solutions	: Integrated File Sharing Security
Service Scale	: SME, Enterprise & Multinational Company

ABOUT

EasiShare is an Enterprise File Security Solution on a single platform to manage, share and govern files anywhere and anytime which being used in government agencies and large multinational enterprises today. EasiShare offers simple user interface to keep user experience richly consistent and productive without compromising on security on your organization's own data center. Deployment options can either be on-premise or private cloud.

Government & enterprise customers can count on EasiShare to access and share documents securely and conveniently. EasiShare does not keep any copies of the file exchanged between the client application and the storages. Coupled with a centralized audit log facility, this gives administrator peace of mind as they know exactly where the files are. Administrators can also centrally managed policies of both users and devices in the Central Admin portal provided.

PRODUCT OVERVIEW

SECURE. SYNC. SHARE. SIMPLIFIED

Secure
Recognised Leader in Government
Security Compliance Success

Simple
Intuitive. Logical.
No user training required.

Sync
Effortless handshake with IBM, Microsoft & major platforms

For User
EasiShare was designed to give users 100% Confidence with 100% Control.

This includes sysadmins from accessing user files.

In addition, recipients can be restricted to a ""view only"" mode (with watermark) to prevent plagiarism.

For Admin
Effortless Integration.
EasiShare integrates easily with Award-Winning Solutions from e.g. Microsoft, SecureAge, IBM. This improves ROI on invested infrastructure, and ensures a peace of mind.
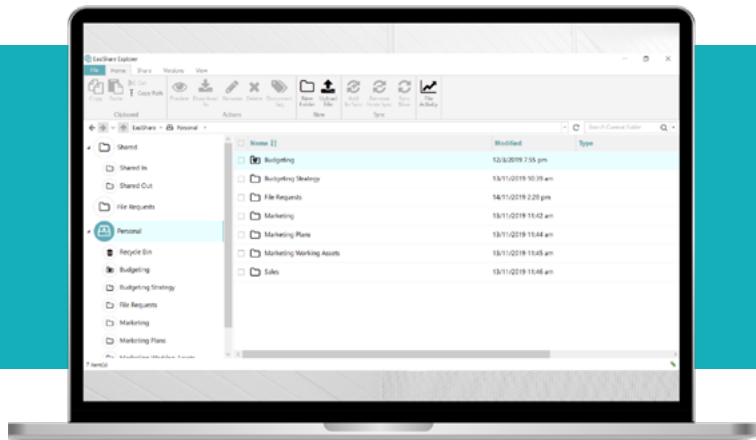

- Seamless Management of Storages
- Single Set of User Login Details
- Protection of Data at Rest
- Handshakes with Leading Solutions
- File Access Only by Intended Recipients
- Integration Designed for SysAdmins

Logical UI. No Training Required.
EasiShare's user interface (UI) is logically designed so that users will find it intuitive.
It was created based on the successful elements of Windows File Explorer.
So, sysadmins can focus on critical functions. Not training users."

Product Issuer	: Microstrategy
Issuer's Business Type	: IT and Software
Headquarter	: USA
Product Website	: www.microstrategy.com
Target Market	: Cross Industry
Solutions	: Analytics & Business Intelligence, Mobile, HyperIntelligence
Service Scale	: Small Medium and Enterprise Business, Multinational Company

ABOUT

MicroStrategy Incorporated is a company that provides business intelligence (BI), mobile software, and cloud-based services. provide powerful software solutions and expert services that empower every individual with actionable intelligence, helping enterprises unleash the full potential of their people and investments. The analytics and mobility platform delivers high-performance business applications that meet the needs of both business and IT.

PRODUCT OVERVIEW

Analytics

Tableau, Qlik, and Power BI plus scalability, security, and data governance—the best of both worlds. MicroStrategy 2019 delivers a foundation for users to get more from their favorite tools while accelerating development and enhancing trust. It's all powered by the Enterprise Semantic Graph–a foundation for the Intelligent Enterprise. Empower business teams to tap into trusted enterprise data, blend information from multiple systems, and quickly build content—without giving up their favorite self-service BI tools.

HyperIntelligence

Unique USP to get the information on click-view. Get a push notification that points you to a relevant card with key insights about the customer, account, or product in question. After a quick glance, you'll arrive informed and prepared to lead better conversations.

Cards are a brand-new object in MicroStrategy 2019 that power HyperIntelligence™. They consolidate a variety of enterprise data into bite-sized views of information that are injected directly into the websites, applications, and tools you already use. Whether you're browsing a website, using a CRM system, or composing an email, cards bring contextual answers to you in the right moment.
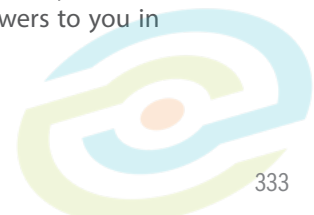

Identity & Telemetry

Embed into MOBILE APPS, Integrate with WEB APPS, Extend to any PACS. Helps organizations unlock the potential of a fully connected Intelligent Enterprise through the power of a mobile badge. Deploy this incredibly convenient credential to employees, suppliers, partners, and customers to open doors, unlock workstations, log into applications and websites, scan QR and barcodes, record their locations, find other users, and more.

Enterprise Platform

Embedded analytics empowers Intelligent Enterprises with highly customized and powerful web and mobile reporting applications that match your organization's brand. Easily embed sophisticated analytical functionality in existing applications, integrate into a custom product offering, or extend MicroStrategy with 3rd-party capabilities.

Mobile

MicroStrategy offers native SDK integration with three major EMM providers: MobileIron, Good, and AirWatch. MicroStrategy Mobile further supports EMM capabilities by incorporating guidelines set by the AppConfig Community. With this native integration, EMM vendors can govern various aspects of workforce mobility, including devices, applications, and services—such as updates, access settings, device restrictions, password protocols, and more.

Cloud

Cloud Platform delivers everything you need to deploy secure, scalable, flexible, and extensible cloud solutions that meet the business and IT needs of your entire organization. Skip the legwork and tap into the industry's leading enterprise analytics and mobility platform--in a matter of minutes.

Product Issuer	: MySQL by Oracle
Issuer's Business Type	: Open Source Software
Headquarter	: USA
Product Website	: dev.mysql.io
Target Market	: Cross Industry
Solutions	: Database Service
Service Scale	: SME, Enterprises, Multinational Companies

ABOUT

MySQL is free and open-source software under the terms of the GNU General Public License, and is also available under a variety of proprietary licenses. MySQL was owned and sponsored by the Swedish company MySQL AB, which was bought by Sun Microsystems (now Oracle Corporation).[8] In 2010, when Oracle acquired Sun, Widenius forked the open-source MySQL project to create MariaDB. MySQL is a component of the LAMP web application software stack (and others), which is an acronym for Linux, Apache, MySQL, Perl/PHP/Python. MySQL is used by many database-driven web applications, including Drupal, Joomla, phpBB, and WordPress. MySQL is also used by many popular websites, including Facebook.

PRODUCT OVERVIEW

MySQL is the world's most popular open source database. Whether you are a fast growing web property, technology ISV or large enterprise, MySQL can cost-effectively help you deliver high performance, scalable database applications.

Enterprise Edition
Highly scalable with all enterprise options like MySQL Enterprise Monitor, Enterprise Backup, Enterprise Security, Thread Pool, InnoDB Clustering & Replication. Easily integrated with ODI, Golden Gate

Standard Edition
For SME'S an ideal database solution with all the features of transactional processing with ACID compliance. Suitable for basic database operations where cluster and replication not required

Cluster CGE
Proper Cluster with HA, Highly scalable with all enterprise options like MySQL Enterprise Monitor, Enterprise Backup, Enterprise Security, Thread Pool, Clustering Carrier Grade & Replication. Easily integrated with ODI, Golden Gate, Secure Backup. Most suitable for TELCO.

Service Scale   : SME, Resource Industry, FSI

ABOUT

Oracle has come a long way from a small database management company to a power player in server and cloud industry. Oracle took at milestones in its History, and keep digging for new future innovation.

PRODUCT OVERVIEW

ORACLE ENGINEERED SYSTEMS

Oracle's engineered systems bring extreme performance to every layer of the technology stack and every aspect of your business. Their products include Exadata Database Machine, MiniCluster, Exalogic Elastic Cloud, Database Appliance, Big Data Appliance, Zero Data Loss Recovery Appliance, Private Cloud Appliance, and SuperCluster.

Benefits:
Cloud Ready
All Oracle engineered systems consumption models are cloud-ready when you are. Choose traditional on-premises deployment, private cloud, or public cloud behind your firewall—and get the same set of world-class, fully compatible, cloud-ready capabilities.

Cut Costs from Day One
Control software licensing costs by using fewer database cores to get more work done. Deploying a single-vendor model means you'll spend less time on IT operations from day one, and more time creating new value for your organization.

Relish a No-Fear Future
You can deploy Oracle engineered systems with confidence, knowing that the world's largest organizations trust Oracle to optimize and protect their most critical databases and applications. And, as your operational requirements change, Oracle engineered systems can easily integrate cloud capabilities when you need them.

ORACLE SERVERS
They are engineered to deliver record performance with Oracle applications, including Oracle Database and enterprise Java—whether you deploy your systems on premises or in the cloud. Their products include - Oracle x86 Systems, Fujitsu SPARC Servers, Oracle Rack Cabinets, Oracle SPARC Servers, NEBS Compliant Servers, and Network Adapters for Oracle Servers.

HARDWARE

Benefits:

Fast

Improve throughput. Co-engineered hardware and software deliver breakthrough performance to accelerate enterprise-computing tasks.

Secure

Mitigate threats. Protect your critical data with built-in data encryption, application memory protection, compliance auditing, and other standard security features.

Flexible

Freedom of choice. Oracle servers are available in any deployment model you need; on premises, private cloud and public cloud and is the same technology used to run Oracle's public cloud solution.

ORACLE STORAGE

Automated storage management simplifies operations and reliably protects and recovers mission-critical Oracle Databases with zero data-loss capabilities. Oracle engineered storage solutions are architected, tested, and optimized with the complete Oracle technology stack so you don't have to do the integration yourself. Their products include Zero Data Loss Recovery Appliance, StorageTek Tape Automation, and Oracle ZFS Storage Appliance.

Benefits:

Utilize Unique Capabilities

Only Oracle can fully integrate storage resources with Oracle Database, yielding unmatched efficiency, recoverability to any point in time, and management automation.

Accelerate Critical Workloads

High-throughput architectures with built-in Oracle Database optimizations deliver extreme performance and security for dynamic, multiapplication workloads.

Reduce TCO

Oracle engineered storage reduces database storage capacity requirements by up to 50 percent, enables 4:1 storage consolidation, and automates up to 90 percent of routine setup and tuning tasks.

INFRASTRUCTURE SOFTWARE

Oracle Infrastructure Software is backed by enterprise-grade support and features a broad range of deployment options to meet cloud native computing requirements for developers and IT operations personnel. Their products include Oracle Linux, Oracle Solaris, Oracle VM, and Oracle Secure Global Desktop.

Benefits:

Open
A CNCF-compliant, open source stack gives you freedom from lock-in and allows you to stay up to date with the latest technologies.

Choice
You can deploy your apps where you want: within on-premises private clouds, in popular public clouds, and in Oracle Cloud.

 Simple
Use the popular Oracle VM VirtualBox to develop on your desktop of choice and deploy to the cloud. Pretested templates and workflows simplify configuration and deployment.

SOFTWARE

ORACLE DATABASE

An Oracle database is a collection of data treated as a unit. The purpose of a database is to store and retrieve related information. A database server is the key to solving the problems of information management. Its products include Oracle Database, Data Warehouse and MySQL Database.

Benefits:

Industry-Leading Performance
Integrated machine-learning algorithms drive automatic caching, adaptive indexing, advanced compression, and optimized cloud data-loading to deliver unrivaled performance.

Secured
Administers security automatically with self-patch and self-updates with no downtime. All data is automatically secured with strong encryption, turned on by default. Access is monitored and controlled, protecting from external attacks and unauthorized internal access.

Lower Cost
Expand/shrink compute and storage independently without costly downtime. No overpaying for partially used or fixed configurations.

ORACLE FUSION MIDDLEWARE

Oracle Fusion Middleware is the digital business platform for the enterprise and the cloud. It enables enterprises to create and run agile, intelligent business applications while maximizing IT efficiency through full utilization of modern hardware and software architectures. Their products include Oracle Data Integrator, Oracle Golden Gate, Oracle Identity Management, Oracle Business Intelligent, and Oracle Java.

Benefits:

Fast
Improve throughput. Co-engineered hardware and software deliver breakthrough performance to accelerate enterprise-computing tasks.

Secure
Mitigate threats. Protect your critical data with built-in data encryption, application memory protection, compliance auditing, and other standard security features.

Flexible
Freedom of choice. Oracle servers are available in any deployment model you need; on premises, private cloud and public cloud and is the same technology used to run Oracle's public cloud solution.

ORACLE CLOUD

Oracle Cloud is an enterprise cloud for business that offers self-service business applications delivered on an integrated development and deployment platform, with tools to extend and create new services rapidly. In addition, Oracle Cloud includes built-in identity management functionality. Their products include Autonomous Database, Analytic Cloud, and Oracle Management Cloud

Benefits:

Self Service
Accelerated time to market with self service provisioning and intuitive tools.

Easy to use
Zero coding and configuration with point-and-click user interface.

Simple
Highly available, scalable integration platform at your fingertips with simple subscription.

ORACLE SOLARIS

Oracle Solaris is a Unix operating system and the trusted business platform that you depend on. The Solaris Operating System delivers enterprise-grade performance, stability and security. One OS, supported on over 1,000 SPARC and x86 platforms, can span the Web tier, the data warehouse, and the most demanding technical compute applications.

Benefits:

Built-In Virtualization
Lowest overhead, lowest latency solution on the market. Software defined networking drives network virtualization into the network infrastructure. Secure live migration with Oracle VM for SPARC and x86.

Scalable Data Management
Oracle Solaris ZFS, the default file system in Oracle Solaris 11, brings advanced storage features such as built-in deduplication, encryption, and thin provisioning to enterprise servers. Very low overhead Oracle Solaris ZFS snapshots tightly integrated with the IPS software packaging systems to deliver boot environments that allow fail-safe updates.

Advanced Protection
Fully integrated security for users, applications, and devices while simplifying administration with fine-grained delegated management, implementing the latest security standards and continuing Oracle Solaris' leadership position as a highly secure operating system.

ORACLE LINUX

Operating systems, containers, and virtualization are the fundamental building blocks of modern IT infrastructure. Oracle combines them all into one integrated offering: Oracle Linux. Operating on your choice of hardware—in your data center or in the cloud.

Benefits:

Reduced Costs
Lower costs by only paying for support on the systems you want supported.

Better Performance
Improve performance of Oracle software (database or middleware) and hardware.

Reliable
Proven performance and reliability in Oracle Engineered Systems and Oracle Cloud.

ORACLE VM

Designed for efficiency and optimized for performance, Oracle's server virtualization products support x86 and SPARC architectures and a variety of workloads such as Linux, Windows and Oracle Solaris. Their products include Oracle VM and Solaris Zone.

Benefits:

Lower Costs
Complete server virtualization and management with no license costs.

Faster Deployment
Speeds up application deployment with VM Templates.

Advanced Features
Features include Secure Live Migration, VM High Availability, P2V and V2V conversion, Web Services API, and other advanced features.

About CTP

Beginning 2013, the CTI Group has embarked on an aggressive expansion plan outside of Indonesia and intends to bring the same value to the shores of Malaysia and Philippines in the next two years. This is in line with the Group's vision of being the most preferred regional IT Infrastructure partner to the many brands that it represents presently.

Service Scale : SMEs, Enterprises & Multinational Company

ABOUT

Cloudflare: an integrated global platform
At Cloudflare, our mission is to help build a better Internet. Cloudflare is a global cloud platform that delivers integrated security, performance, and reliability for applications and teams. Cloudflare offers a broad range of network services with integrated, purpose-built products that protect and accelerate applications, networks, and employees and contractors - all delivered via the cloud.

PRODUCT OVERVIEW

Cloudflare for Enterprise, meet business challenges with Cloudflare's enterprise-grade security, performance, and reliability for applications, devices, networks, and teams. These are the advantages of Cloudflare;

Unified control plane

Cloudflare provides the unified control plane for the network layer across multi-cloud, and hybrid- cloud deployments. The unified control plane breaks the silos and avoids cloud vendor lock-in.

Ease of use

Our cloud-native platform is easy to implement and manage. Our products scale with your business.

Network scale and performance

Cloudflare has more than 200 points of presence worldwide, all of them offering our full product stack. Our network operates within 100ms for 99% of the global population.

Continuous innovation

We are the industry's first universal forwarder that allows security and protection for both apps and users.

Security at scale

We leverage shared intelligence from across our network to counteract cyber attacks at a massive scale.

Cloud native, multi-cloud

Cloudflare is the only cloud-native network to give enterprise-grade control and visibility into on- premise, hybrid, and multi-cloud architectures.

Product Issuer : Darktrace

Issuer's Business Type : Cyber security, Cyber Defense, Information Security, Intelligence, Information Technology, Machine Learning

Headquarter : USA

Product Website : www.darktrace.com

Target Market : Cross Industry

Solutions : Software Security

Service Scale: SME, Enterprise & Multinational Company

ABOUT

Darktrace is named 'Best Security Company of the Year' in the Info Security Products Guide 2016, Darktrace is one of the world's leading cyber threat defense companies.Its Enterprise Immune System technology detects and responds to previously unidentified threats, powered by machine learning and mathematics developed by specialists from the University of Cambridge. Without using rules or signatures, Darktrace is uniquely capable of understanding the 'pattern of life' of every device, user and network within an organization, and defends against evolving threats that bypass all other systems. Some of the world's largest corporations rely on Darktrace's self-learning technology in sectors including energy and utilities, financial services, telecommunications, healthcare, manufacturing, retail and transportation.

Specialties:
Cyber security, Cyber defense, Information security, Intelligence, Information technology, Machine learning

PRODUCT OVERVIEW

Darktrace Threat Visualizer
Benefits:
• 3D visualization of entire network topology
• Real-time global overview of enterprise threat level
• Intelligently clusters anomalies
• Pan-spectrum viewing – higher-order network topology; specific clusters, subnets, and host events
• Searchable logs and events
• Replay of historical data
• Concise summary of overall behavior for device and external Ips
• Designed for business executives and security analysts

Darktrace ICS
Benefits:
• Unprecedented visibility into ICS activity
• Protects against insider threat, including operators and privileged users
• Detects threats in real time
• Coverage of both IT and OT environments
• Correlates actions over time, for refined understanding of 'normal'

Darktrace Antigena
Benefits:
• Take automated, measured, and targeted action
• Responds faster than any security team can
• Human confirmation mode
• No rules, no signatures
• Fully configurable
• Does not disrupt day-to-day activity

Darktrace vSensors
Benefits:
• Ingests virtual traffic from a limited set of Ips
• Sends data efficiently and securely to the Darktrace master appliance
• Sends approximately 1% of the original raw network data ingested to the master appliance
• Works with third-party clouds

Cloud Connectors
Benefits:
• Complete visibility of user interactions within cloud applications
• Easy install — less than an hour
• Early-stage threat detection

Output Connectors
Darktrace is compatible with all major SIEMs that support the industry-standard Common Event Format (CEF) and Log Event Extended Format (LEEF). These include providers such as ArcSight, LogRhythm, QRadar and Splunk. Darktrace can also be configured to trigger alerts when the most serious threats are detected.

Product Issuer	: Defenxor
Issuer's Business Type	: Cyber security, Cyber Defense, Information Security, Intelligence, Information Technology, Machine Learning
Headquarter	: Indonesia

Service Scale: SME, Enterprise & Multinational Company	

ABOUT

We are Defender Nusantara Semesta (DNS). We are providing IT security for businesses that safeguards business assets, by improving their information security levels to higher and acceptable levels. DNS is a security partner of Computrade Technology Indonesia, a holding company that focuses on IT, and is one of the biggest IT Infrastructure Solution Partner in the region with long experience and strong commitment. Our name originates from the word 'defender', usually found in soccer as a guard role. It's also a wordplay on the abbreviation 'DNS' which is a common term for Domain Name Service, an essential and unseparable part of the IT and Internet world.

PRODUCT OVERVIEW

Defenxor Intelligence Managed Security (DIMS)

To be able to protect business from today's threats, typically you need to have the hardware capabilities, the experts to operate it, and policy as 'rule of the game'. These holistic approach (Technology, People and Process) is necessary to achieve optimum security condition. Professional IT security experts are costly, besides being very hard to find in the industry while find and adopting suitable IT Security policy and procedure sometimes leads company to frustration. And then we have security threats that are evolving every day, abundant power & resource costs, compatibility issues, compliance, and so on. Sounds painstakingly complex? It doesn't have to be that way.

Defenxor Intelligence Security Consulting (DISC)

With increasingly high adoption of BYOD and BYOA, policies can make or break the security of your business. Reduce risks by defining the correct policies and enforcing it optimally.

Security Audit can help you on evaluate your current posture and identify the gaps between real condition and those criteria.

Assistance for your internal IT security team to improve their capabilities and ensuring that every implementations are up to standard. We also provide assistance for developing and delivering your internal Security Operation Center to achieve it's defined goals.

Lightning-fast response and mitigation procedures for incidents, and when combined with our DIMS solution, we provide a holistic security approach that will keep your business running smoothly in the process.

PRODUCT OVERVIEW

Defenxor Intelligence Managed Security (DIMS)

We are Defender Nusantara Semesta (DNS). We are providing IT security for businesses that safeguards business assets, by improving their information security levels to higher and acceptable levels. DNS is a security subsidiary of Computrade Technology Indonesia, a holding company that focuses on IT, and is one of the biggest IT Infrastructure Solution Partner in the region with long experience and strong commitment. Our company name originates from the word 'defender', usually found in soccer as a guard role. It's also a wordplay on the abbreviation 'DNS' which is a common term for Domain Name Service, an essential and unseparable part of the IT and Internet world. Our brand name is Defenxor. Defenxor originates from the word 'Defensor', which is a Latin word for Guardian, or protector. The brand has 3 business pillars, which are reflected in its services.

Defenxor Intelligence Security Consulting (DISC)

With increasingly high adoption of BYOD and BYOA, policies can make or break the security of your business. Reduce risks by defining the correct policies and enforcing it optimally.

Security Audit can help you on evaluate your current posture and identify the gaps between real condition and those criteria. Vulnerability Assessment and Penetration Testing will find and evaluate any existing Vulnerabilities that might harm your business before exploited by the bad-guy.

Assistance for your internal IT security team to improve their capabilities and ensuring that every implementations are up to standard. We also provide assistance for developing and delivering your internal Security Operation Center to achieve it's defined goals. Lightning-fast response and mitigation procedures for incidents, and when combined with our DIMS solution, we provide a holistic security approach that will keep your business running smoothly in the process.

Defenxor Intelligence Security Integrator

Defenxor Intelligence Security Integrator (DISI)

Defenxor makes it easier for you to avoid security hardware's huge CAPEX through our installment program, therefore converting it into OPEX for your business for optimum ROI. Besides providing installment, we also add value to the service by including Managed Security Services in the package, so you get the best bang for your buck. Security should be affordable but also easy to manage, so you can focus more on your bottom line.

Main Features

1. Installment Program For Security Device Ownership
Lowering CAPEX, optimizing OPEX to provide your business with optimum ROI
2. Competitive Price for Security Device
The advantage of our wide network of hardware distribution, so you get the best price in the market, always.
3. Additional managed Services
We will also provide monitoring and management of security function, bundled with purchase of products from us

DISI Differentiation

1. Wide range of Security Products.
2. Capable and certified security engineer to install and deploy the produtcs
3. First to come up with flexible financing program and value-add for bundled security services

At Defenxor, We Believe That Security Should Be Simple

We can help you reduce the complexity of managing IT Security, ensure faster & better incident response and also manage regulatory & compliance requirements.
